Target Malathion 8E is an emulsifiable insecticide to be mixed with water.

For proper mixing, fill the spray tank half full of water before adding Target Malathion 8E. Add the desired amount of Target Malathion 8E then add the balance of water using either mechanical or bypass agitation.

Apply as a thorough coverage spray, applying enough dilute solution to insure that all leaf surfaces as well as twigs and branches are completely covered. Start applications as soon as pests are first observed. Repeat as necessary.

The addition of 4 to 6 ounces of Target Wetting Agent per 100 gallons of spray will facilitate spray coverage.
