PRECAUTIONARY STATEMENTS
HAZARD TO HUMANS AND DOMESTIC ANIMALS:

DANGER

EXTREMELY HAZARDOUS LIQUID AND VAPOR UNDER PRESSURE.
INHALATION MAY BE FATAL OR CAUSE SERIOUS ACUTE ILLNESS OR DELAYED LUNG OR NERVOUS SYSTEM INJURY. DO NOT BREATHE VAPORS.
LIQUID OR EXCESSIVE VAPOR CAN CAUSE SERIOUS SKIN OR EYE INJURY WHICH MAY HAVE A DELAYED ONSET.
DO NOT GET LIQUID ON SKIN, IN EYES, OR ON CLOTHING.

THIS PRODUCT CONTAINS CHLOROPRIN WHICH MAY BE IRRITATING TO THE UPPER RESPIRATORY TRACT, AND EVEN AT LOW LEVELS CAN CAUSE PAINFUL IRRITATION TO THE EYES, PRODUCING TEARING. IF THESE SYMPTOMS OCCUR, LEAVE THE FUMIGATION AREA IMMEDIATELY. EARLY SYMPTOMS OF CHLOROPRIN OVEREXPOSURE ARE LACHRYMATION, RESPIRATORY DISTRESS AND VOMITING.

OBSERVE THE FOLLOWING PRECAUTIONS

GENERAL PRECAUTIONS

Do not get in eyes, on skin, or on clothing. Do not spill on or exchange contents with any adjacent storage areas. Keep all local regulations and ordinances. It is advisable to supply your physician with information on Chloroprin and Methyl Bromide. Literature on the subject of obtaining medical assistance at once in case of illness after exposure can be found in the medical literature. See Data on Physical and Chemical Properties section.

RESPIRATORY PROTECTION

The concentration of methyl bromide in the working area is measured by a direct-reading detector device (such as a Draeger gas detector) and is not exceeded 5 ppm. A self-contained breathing apparatus (SCBA) is required if the concentration is greater than 5 ppm. All persons in the working area must wear protective clothing and a high-efficiency particulate-filtering respirator and a chlorine-resistant rubber glove. In the event of a spill, a chlorine-resistant rubber glove must be available and will be required entry into an affected area in the event of a leak or spill.

CLOTHING PRECAUTIONS

Wear loose clothing and shoes that are cleaned after each use.
Do not wear jewelry, rings, or tight clothing when handling.
Wear rubber protective clothing and a chlorine-resistant rubber glove when handling.

LIQUID VAPOR LEAKS OR SPILLS ON CLOTHING, WASH IMMEDIATELY.

SPILL OR LEAK PROCEDURE

Precautionary statements contained in this column.

RESTRICTED USE PESTICIDE DUE TO ACUTE TOXICITY

For retail sale to and use only by Certified Applicators, or persons under their direct supervision, and only for those uses covered by the Certified Applicator's certification.

TRI-PAN 76/24
PREPLANT SOIL FUMIGANT

ACTIVE INGREDIENTS:
METHYL BRONIDE 75%
PETROLEUM MONOCARBONS 25%

KEEP OUT OF REACH OF CHILDREN

DANGER

POISON

PRECAUTION AL USUARIO: Si usted no lee Ingles, no use este producto hasta la etiqueta de hay sido ampliamente.

IN ALL CASES OF OVEREXPOSURE, GET MEDICAL ATTENTION IMMEDIATELY IN CASE OF OVEREXPOSURE, GET MEDICAL ATTENTION IMMEDIATELY.

STATEMENT OF PRACTICAL TREATMENT

IF INHALED: Get exposed person to fresh air. Keep warm. Make sure person can breathe freely. If breathing has stopped, give artificial respiration. Give oxygen if needed. Do not give anything by mouth to any unconscious person. Seek medical attention.

IF ON SKIN: Immediately remove contaminated clothing, shoes, and other items covering the skin. Wash contaminated skin area thoroughly with soap and water. Ascertain for at least 15 minutes. Keep open and flush with a steady.

NOTE TO PHYSICIAN: Early symptoms of overexposure are dizziness, headache, nausea, and vomiting, weakness, and collapse. Lung tissue may develop in 2 to 48 hours after exposure, accompanied by cardiac irregularities: these effects are the usual cause of death. Repeated overexposure can result in blurred vision, staggering gait, and mental imbalance, with probable recovery after a period of no exposure. Blood bromide levels suggest the occurrence, but not the degree of exposure. Treatment is symptomatic.

See Side Panel For Additional Precautionary Statements.

PRECAUTIONS FOR SOIL FUMIGATION USE

PRIOR TO FUMIGATION

1. Comply with all local regulations and ordinances. Obtain an application permit from Agricultural Regulatory Agencies as required.
2. Never fumigate alone. It is imperative always to have an extra person or substitute in case of emergency.
3. Operators of application equipment must advise other workers of all precautions in advance. Make sure all personnel are instructed.
4. Handle this fumigant in the open with the operator ‘up wind’ from the container where there is good ventilation.
5. Check fumigant pressure system for leaks before beginning operation.
6. Two trained persons must be present during introduction of the fumigant.
7. When fumigating soil at a rate of 0.1 lbs/gal, 5 gallons of water must be carried on the tractor and poured when it is readily accessible. In addition to water available on the tractor, at least 5 gallons of additional water must be available from the service truck. This water must be portable and in containers marked ‘Decontamination water not to be used for drinking.’
8. Field should be reasonably free of trash before starting the fumigation.

DURING FUMIGATION

1. This fumigant should not be applied when there is an atmospheric inversion. Since unconfined concentrations of chloropicrin may drift to nearby areas, immediately cover treated area with plastic tarps and ventilate for at least 24 hours when the injection depth is less than 10".
2. Do not lift injection shank to turn at an end of a pass until fumigant has drained from system following closure of shutoff valve.
3. If trash is inadvertently pulled by the shanks to the ends of the injection zone, stop, lift the injection shank, channels, and close the shutoff valve. Then turn the truck for the next pass.
4. When changing the cylinders, be certain they are turned off and fumigant system is under pressure. Do not open the system when there are people or structures within where exposure above the permissible exposure limit may occur.

FOLLOWING FUMIGATION

1. Post all treated areas with warning signs, available from your dealer or representative.
2. To children, unauthorized people or animals should be in the fumigation area for 24 hours.
3. When tarps are to be used, two trained persons must be present during removal of the tarps.

SPILL AND LEAK PROCEDURE

1. In case of a rupture of hose or fitting while applying fumigant, immediately stop tractor and engine. Evacuate immediate area of spill or leak. Use DCA or combination air-supplied/with respirator for entry into affected area to correct the problem. Approach from upwind to make necessary repairs.
2. When fumigant is spilled or leaking, proper protective clothing and nearby protection until spill has evaporated or leak has been fixed.

NOTE CAREFULLY

Fumigation may temporarily raise the level of ammonia nitrogen and ammonium salts in the soil. This is most likely to occur when heavy rates of fertilizer and fumigant are applied to soils that are already cold. It may also occur when fumigant is applied to cool, dry soils. Use of a packed soil under low temperatures and use of fumigant at a rate of 0.05% will decrease the potential for this phenomenon. Fumigation may also increase the rate of soil nitrogen fixation and reduce the availability of nitrate nitrogen.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in any manner inconsistent with its labeling.
