PRECAUTIONARY STATEMENTS
HAZARD TO HUMANS AND DOMESTIC ANIMALS:

DANGER

EXTREMELY HAZARDOUS LIQUID AND VAPOR UNDER PRESSURE.
INHALATION MAY BE FATAL OR CAUSE SERIOUS ACUTE ILLNESS OR DELAYED LUNG OR NERVOUS SYSTEM INJURY.
DO NOT BREATHE VAPORS.
LIQUID OR EXCESSIVE VAPOR CAN CAUSE SERIOUS SKIN OR EYE INJURY WHICH MAY HAVE A DELAYED ONSET.
DO NOT GET LIQUID ON SKIN, IN EYES, OR ON CLOTHING.

THIS PRODUCT CONTAINS CHLOROPICLIN WHICH MAY BE IRITATING TO THE UPPER RESPIRATORY TRACT, AND EVEN AT LOW LEVELS CAN CAUSE PAINFUL IRRITATION TO THE EYES, PRODUCING TEARING. IF THESE SYMPTOMS OCCUR, LEAVE THE FUMIGATION AREA IMMEDIATELY. EARLY SYMPTOMS OF CHLOROPICLIN OVEREXPOSURE ARE LACHRYMATION, RESPIRATORY DISTRESS AND VOMITING.

OBSERVE THE FOLLOWING PRECAUTIONS

GENERAL PRECAUTIONS
1. Do not get in eyes, on skin, or on clothing.
2. Do not spill or discharge contents outside of areas confined for treatment.
4. It is advisable to supply your physician with information on Chloropiclin and methyl bromide. Literature is available from your dealer or distributor.
5. Observe medical treatment as soon as illness occurs, and do not allow conditions which could accidentally cause further exposure until recovery is complete. (See Use to Physicians)

RESPIRATORY PROTECTION
If the concentration of methyl bromide in the working area as measured by a direct-reading detector and, if respiratory protection is provided, is equal to or exceeds the RML, it is recommended that the person wear approved self-contained breathing apparatus designed for chloropiclin and methyl bromide or a NIOSH/OSHA approved self-contained breathing apparatus designed for the contaminants present.

Under normal soil fumigation conditions, the concentration of methyl bromide in the working area will not generally exceed 5 ppm as a time-weighted average and no respiratory protection is required. However, there is the possibility of a spill or leak during soil fumigation. Therefore, a mask or combination air-supplied SCBA regulator must be used. It will be required for entry into an affected area in the event of a leak or spill.

CLOTHING PRECAUTIONS
1. Wear long clothing and socks that are cleaned after each working. Do not wear Jewelry, gloves, or light clothing when handling methyl bromide.
2. Wear long clothing and use skin barrier. If full-face respiratory protection is not required, wear a respirator when a time limit of 15 minutes is exceeded.

3. Following application, immediately remove clothing, shoes, and other items covering the skin. Wash contaminated skin area thoroughly with soap and water.

PRECAUTION AL USUARIO: Si usted no lee Ingles, no use este producto hasta que le atienda le haya sido explicado amplemente.

IN ALL CASES OF OVEREXPOSURE, GET MEDICAL ATTENTION IMMEDIATELY TAKE PERSON TO A DOCTOR OR TO AN EMERGENCY TREATMENT FACILITY

STATEMENT OF PRACTICAL TREATMENT

IF INHALED: Get exposed person to fresh air. Keep warm. Make sure person can breathe freely. If breathing has stopped, give artificial respiration. Give oxygen if needed. Do not give anything by mouth to any unconscious person. Seek medical attention.

IF ON SKIN: Immediately remove contaminated clothing, shoes, and other articles covering the skin. Wash contaminated skin area thoroughly with soap and water.

IF IN EYES: Hold eyelids open and flush with a steady, gentle stream of water for at least 15 minutes.

NOTE TO PHYSICIAN: Early symptoms of overexposure are dizziness, headache, nausea and vomiting, weakness, and collapse. Lung edema may develop within 2 to 4 hours after exposure, accompanied by cyanosis, irregularities. These effects are the usual causes of death. Overexposure can result in blindness, staggering gait, and mental impairment, with possible recovery after a period of no exposure. Blood chloride levels suggest the occurrence, but not the magnitude of exposure. Treatment is symptomatic.

See Side Panel For Additional Precautions Statements.

RESTRICTED USE PESTICIDE
DUE TO ACUTE TOXICITY

For retail sale and use only by Certified Applicators, or persons under their direct supervision, and only for those uses covered by the Certified Applicator's certification.

PRECAUTIONS FOR SOIL FUMIGATION USE

PRIOR TO FUMICATION
1. Comply with all local regulations and ordinances. Obtain an application permit from Agricultural Regulatory Agencies as required.
2. Never fumigate alone. It is imperative always to have an assistant present in case of accident. Always wear protective clothing and respiratory protection at all times.
3. Drivers of application equipment must advise other workers of any hazards and make them aware of protective devices. In addition, drivers must instruct themselves in the proper use of the equipment and how to safely work with the tank car or trailer of the fumigant.
4. Handle this fumigant in the open, in the operator's 'up wind' from the container where there is good ventilation.
5. Check fumigant pressure system for leaks before beginning operation.
6. Two trained persons must be present during introduction of the fumigant.
7. When fumigating soil from a tractor, 5 gallons of water must be carried on the tank car and placed where it is readily accessible. In addition to water available on the tank car, at least 5 gallons of additional water must be available from the service truck. This water must be potable and in containers marked 'decontamination water not to be used for drinking.'
8. Field should be reasonably free of trash before starting the fumigation.

DURING FUMICATION
1. This fumigant should not be applied when there is an atmospheric inversion. Since uncontrollable concentrations of chlorine may drift to nearby areas, immediately cover treated area with plastic tarps and leave for a minimum of 60 hours when the injection depth is less than 10".
2. Do not allow injection shanks to turn at the end of a pass until fumigant has drained from system following closure of shutoff valve.
3. If trash is inadvertently pulled by the shanks to the ends of the field where the trash is not covered, do not cover the trash, then covering the trash with polyethylene film before turning the trash to the next parallel. Do not place the system when there are people or animals or where direct exposure above the personnel exposure levels could occur.

FOLLOWING FUMICATION
1. Post all treated areas with warning signs, available from your dealer or representative.
2. No children, unauthorized persons, or animals should be in the fumigated area for 48 hours.
3. When tarps are in use, two trained persons must be present during removal of the tarps.

SPILL AND LEAK PROCEDURE
1. In case of a rupture of hose or fitting while applying fumigant, immediately stop treatment and review Emergency Response Plan for that fumigant. Use SCBA or combination air-supplied/pressure-operated breathing apparatus and consult with local authorities to ensure that the problem has been solved to make necessary repairs.
2. Keep treated area clear of unauthorized persons until fumigant has evaporated or has been cleaned.

NOTE CAREFULLY
Fumigation may temporarily raise the level of arsenic and other volatile gases in the air. This is most likely to occur when heavy rates of fertilizer and fumigant are applied to soils that are already dry or have dried out. To avoid problems that may occur with the material used to control crops, avoid using fumigants containing potassium salts and avoid using fumigants containing nitrogenous fertilizers. Avoid using fumigants containing ammonium salts and use only fumigants containing nitrate. Avoid using fumigants containing nitrate in crops established and the soil temperature in excess of 60°F. Avoid using fumigants containing nitrate in crops adjacent to treated areas. Avoid using fumigants containing nitrate in crops established and the soil temperature in excess of 60°F. Avoid using fumigants containing nitrate in crops adjacent to treated areas.

STORAGE AND DISPOSAL

STORAGE AND HANDLING
Store in dry, cool, well-ventilated area under lock and key. Post as a pesticide storage area. Do not contaminate water, food, or feed by storage. Persons using or handling containers should wear protective clothing, coverall clothing, and respiratory protection if necessary. Do not use for any other purpose. Place containers in a safe location. Uncontaminated, immediate disposal should be made to an approved facility.

RETURN OF CYLINDERS
Cylinders are the property of:

TRICAL
8770 Highway 25
Muller, CA 95023

and should be returned promptly by the customer. Do not allow cylinders with safety caps in use. When a cylinder is partially full and there is no further requirement for the product, contact TRICAL for return instructions.

SHIPPING
This fumigant is classified in the U.S. Department of Transportation Hazardous Materials Regulations as Class 6.1 (Inhalation Hazard) and as a hazardous material for transportation purposes. In addition, labeling is allowed. Describe empty cylinders as having lost contained Methyli bromide and more than 20 Chloropropene. Do not ship with food, feeds, or clothing.

DISPOSAL
Do not contain water, food, or feed by storage or disposal. Pesticide waste is toxic. Incorrect disposal of empty pesticide, spray mixture, or rinsate in violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Program, or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance.

ENVIRONMENTAL HAZARD
This pesticide is toxic to aquatic life. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, ocean, or public waters unless this product is specifically identified and addressed in an NPDES permit. Do not discharge effluent containing this product in sewers systems without previously notifying the sewage treatment plant authority. For guidance contact your State Water Board or Regional EPA Office. Do not use containers or application equipment made of asbestos, aluminum, or their alloys, under certain conditions this fumigant is to be used to clean fumigant pressure system or corrosion will result. Use all is satisfactory for this purpose.

GENERAL INSTRUCTIONS

THIS FUMIGANT IS A HIGHLY HAZARDOUS MATERIAL AND SHOULD BE USED ONLY BY PERSONNEL TRAINED IN THE USE OF SUCH MATERIALS. READ AND FOLLOW ALL LABEL PRECAUTIONS AND INSTRUCTIONS. INCLUDE THE ATTACHED EQUIPMENT. ALL PERSONS WORKING WITH THIS PRODUCT MUST BE FAMILIAR WITH THE PROPER USE OF THE FUMIGANT.

GENERAL INFORMATION: This material is a granular soil fumigant for the control of soil-borne pests as listed. When used as directed, it is used in soil to be planted to the crops listed below.

SOIL PREPARATION: Prior to application, the soil should be in condition for planting and with sufficient moisture to support seed germination.

APPLICATION: Apply this fumigant by means of either a foot or a back pack sprayer to a depth of 6" to 8" below soil surface to soil fumigate after application. Adjust to a wet soil.

* For production of transplants only.

PRECAUTION: Remove tarpaulin after 48 hours. Allow the soil to aerate for
two weeks before planting. If odor of fumigant persists beyond this
two-week period, disc or plow the soil to help aerate.

FOR USE IN CALIFORNIA ONLY

FRUIT AND NURSERY PREPLANT SOIL APPLICATION:

For the control of soil-borne pests such as nematodes, insects, and
diseases caused by certain species of Verticillium, Pythium, and Phyto-
porium.

Apply 300 to 450 pounds per acre of Tri-Con 50/50 by means of chlorella
sprayed no more than 12” apart and 8” - 12” below the soil surface. If
not fumigant after application, cover with a tarpaulin. Remove tarpaulin
after 72 hours. Allow the soil to aerate for two weeks before planting. If
odor of Tri-Con 50/50 persists after two weeks, disc or plow the soil to help
aeration.

Do not apply to areas adjacent to fields where valuable crops are grow-
ing or near buildings inhabited by humans or livestock.
