

## RECOMMENDED DOSAGES: Broadcast Application

Land To Be Planted To:	Lbs. Per Acre	Gal. Per Acre
Brussel Sprouts	400 - 600	33 - 50
Cucumbers	500 - 550	42 - 46
Eggplant	500 - 650*	42 - 54
Floral Crops	500 - 650*	42 - 54
Melons	500 - 650*	42 - 54
Nursery Crops	500 - 650*	42 - 54
Onions	500 - 550	42 - 46
Plant & Seed Beds	500 - 550	42 - 46
Radishes	500 - 550	42 - 46
Strawberries	500 - 650*	42 - 54
Sweet Potatoes	275 - 375	23 - 31
Tomatoes	500 - 650*	42 - 54

\* If treated area is covered with a plastic tarpaulin immediately after application, dosage may be reduced by 33%.

### NOTE:

1. Use highest rate on heavy soils such as clay or muck and lowest rate on light sandy soils.
2. Use highest rate for cyst-forming nematodes and Verticillium wilt control.
3. Row or bed applications may be made at the broadcast rates, but the amount used will be proportionately less per acre depending on the row spacing and width of treatment in the row or bed.

## FIELD REENTRY

Workers entering the treated area for 72 hours after the application of 1,3-dichloropropene must wear protective clothing.

## EXPOSURE AND AERATION

After application, leave the soil undisturbed for 14 to 21 days. Wet soil retards diffusion of the fumigant, thus requiring a longer exposure period. At the end of the exposure period, aerate the soil by plowing or deep cultivation. If heavy rains accompanied by low temperature occurs during the exposure period, working soil several times is essential for thorough aeration. Aeration is usually complete when the odor of the fumigant is no longer evident. This usually occurs by 14 days after application.
