

**SUPER CHLORINATED GRANULAR
PRECAUTIONARY STATEMENTS**

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER: Corrosive, causes eye damage. May be fatal if swallowed. Do not get in eyes, on skin, or on clothing. Irritating to nose and throat. Avoid breathing dust. May cause burns to broken skin. Wear goggles or face shield and protective clothing when handling. Wash hands after handling.

PRACTICAL TREATMENT (FIRST AID): If swallowed, feed gruel, cooked cereal, or bread soaked in milk, followed by olive oil or cooking oil. In case of personal contact, remove excess material and flush skin or eyes with cold water for at least 15 minutes. For eyes, get medical attention as soon as possible. Remove and wash contaminated clothing before reuse.

CHEMICAL HAZARDS: Strong oxidizing agent. Do not use moist or damp utensils. Contamination with moisture, dirt, organic matter, or other chemicals, or any other foreign matter, may start a chemical reaction with generations of heat, liberation of hazardous gases, and possible generation of fire.

ENVIRONMENTAL HAZARDS: This pesticide is toxic to fish. Keep out of lakes, streams, ponds, or public waters. Permits may be required for discharges containing this pesticide into public waters. For guidance, contact the regional office of the Environmental Protection Agency.

STORAGE AND DISPOSAL: Keep product dry in tightly closed container when not in use. Store in a cool, dry, well-ventilated area away from heat or open flame. In case of decomposition, isolate container in open area if possible, and flood with large amounts of water. Do not reuse empty container. Rinse empty container thoroughly with water to dissolve all material before discarding. Place in trash collection or dispose in approved landfill area, or bury in a safe place.

DIRECTIONS OF USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

When starting up a new pool, superchlorinate to satisfy chlorine demand and to establish a chlorine residual of 1.0 ppm to 1.5 ppm available chlorine. To accomplish this, add 2 oz SUPER CHLORINATED GRANULAR concentrated per 1000 gallons of pool water. The next morning, add SUPER STABILIZER cyanuric acid according to the directions on the label.

SUPER CHLORINATED GRANULAR should be added daily or as needed at the rate of 1/8 to 1/4 oz. per 100⁰ gallons of pool water to maintain a chlorine residual at all times of 1.0 ppm to 2.0 ppm as determined by a suitable test kit. The pH should be maintained between 7.2 and 7.6.

A shock treatment should be made every week during hot weather or after heavy rains. Less frequent shock treatments may be made during cool weather. For the shock treatment, add 2 oz of SUPER CHLORINATED GRANULAR concentrated per 1000 gallons of pool water. Swimmers should not be permitted in the pool after the shock treatment until the chlorine has reached the 1.0 ppm to 2.0 ppm range.

Keep in mind that a slight flexibility must be maintained in the event of heavy accumulations of dust and dirt caused by storms or super heavy bathing loads which require additional dosages as needed to maintain the chlorine residual between 1.0 ppm to 2.0 ppm.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER: Corrosive, causes eye damage. May be fatal if swallowed. Do not get in eyes, on skin, or on clothing. Irritating to nose and throat. Avoid breathing dust. May cause burns to broken skin. Wear goggles or face shield and protective clothing when handling. Wash hands after handling.

PRACTICAL TREATMENT (FIRST AID): If swallowed, feed gruel, cooked cereal or bread soaked in milk, followed by olive oil or cooking oil. In case of personal contact remove excess material and flush skin or eyes with cold water for at least 15 minutes. For eyes get medical attention as soon as possible. Remove and wash contaminated clothing before reuse.

CHEMICAL HAZARDS: Strong oxidizing agent. Do not use moist or damp utensils. Contamination with moisture, dirt, organic matter, or other chemicals or any other foreign matter, may start a chemical reaction with generation of heat, liberation of hazardous gases, and possible generation of fire.

ENVIRONMENTAL HAZARDS: This pesticide is toxic to fish. Keep out of lakes, streams, ponds, or public waters. Permits may be required for discharges containing this pesticide into public waters. For guidance contact the regional office of the Environmental Protection Agency.

STORAGE AND DISPOSAL: Keep product dry in tightly closed container when not in use. Store in a cool, dry, well ventilated area away from heat or open flame. In case of decomposition, isolate container in open area if possible, and flood with large amounts of water. Do not reuse empty container. Rinse empty container thoroughly with water to dissolve all material before discarding. Place in trash collection or dispose in approved landfill area, or bury in a safe place.

DIRECTIONS OF USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

When starting up a new pool, super chlorinate to satisfy chlorine demand and to establish a chlorine demand residual of 1.0 ppm to 2.0 ppm available chlorine. To accomplish this, add SUPER CHLORINATED GRANULAR according to the directions on the label. The next morning, add cyanuric acid to stabilize pool. For pools with a stabilizer, the pool should be maintained between 1.0 ppm and 2.0 ppm.

A shock treatment should be made every week during hot weather or after heavy rains. Less frequent shock treatments may be made during cool weather. For the shock treatment, add SUPER CHLORINATED GRANULAR according to directions on the label. Swimmers should not be permitted in the pool after the shock treatment until the chlorine has reached the 1.0 ppm to 2.0 ppm range.

Keep in mind that a slight flexibility must be maintained in the event of heavy accumulations of dust and dirt caused by storms or heavy bathing loads which require additional dosages as needed to maintain the chlorine residual between 1.0 ppm and 2.0 ppm.

JUMBO CHLORINATED TABLETS should be added daily or as needed at the rate of 1 (one) tablet per 10,000 gallons of pool water to maintain a chlorine residual at all times of 1.0 ppm to 2.0 ppm as determined by a suitable test kit. The pH should be maintained between 7.2 and 7.6. Bather should not be allowed to enter the pool until the chlorine level falls to 3 ppm or less.

These tablets are slow dissolving and are acidic, and will balance the high pH of pool water in most areas. Water at pH below 7.0 will burn the eyes and may cause corrosion and scale formation to the pool or filtering system. At pH above 8.0 eye irritation also occurs and chlorine effectiveness rapidly diminishes.
