

Spa Brite

HOW TO STORE AND HANDLE FAS-KILL

- Store in a cool, dry place. Do not transfer into unlabeled containers. Close containers tightly after each use.
- Protect from moisture and heat.
- Add material only to water.
- May cause fire or explosion if mixed with other chemicals.
- Use only glass, plastic or enamel ware cups and spoons in measuring product. Make sure they are clean and dry. Wash hands thoroughly with water after use. If spilled, hose down thoroughly. Never dispose of material by throwing into refuse bins.
- Rinse empty container thoroughly with water and discard it.

FIRST AID:

External: In case of skin and eye contact, flush with plenty of water. If skin irritation persists, get medical attention. For eyes, get prompt medical attention.

Internal: If swallowed, drink mucilage, raw egg white, milk or rice gruel. Follow with emetic (tablespoon of mustard in a glass of warm water). CALL A PHYSICIAN IMMEDIATELY.

WARNING: May be fatal or harmful if swallowed. Strong oxidant. May produce chemical burns. Do not handle with wet hands. Fire may result from contact with acids, organic or combustible matter. Do not get on skin or in eyes.

ENVIRONMENTAL HAZARDS

This product is toxic to fish. Treated pool effluent water should not be discharged where it will drain into lakes, streams, ponds, or public water. Do not contaminate water by cleaning of equipment or disposal of wastes.

Apply this product only as specified on the label.

HOW TO USE SPA BRITE AS A SHOCK TREATMENT TO REMOVE ALGAE & SLIME

Start up. 1. Backwash filter. 2. Utilizing your pool test kit adjust pH of spa or hot tub water to 7.2 - 7.6. Add Alkalinity Plus to correct an acid condition (less than 7.2). Add Dry Acid if the pH is greater than 7.6. Maintain pH range of 7.2 - 7.6 for a minimum of six hours before the addition of Spa Brite. Follow directions on labels. 3. Use 1 1/2 oz. per 500 gallons of water. The next day brush the dead algae and slime from the walls and bottom of the spa or hot tub. Adjust pH once again to 7.2 to 7.6.

SHOCK TREATMENT FOR THE PREVENTION OF ALGAE GROWTH

The spa or hot tub water should be shock treated about once each week, using 1 1/2 ounces of Spa Brite per 500 gallons of water. This should be added when the spa or hot tub will not be used for a minimum of 12 hours. Test the chlorine residual and if above 2.0 ppm do not allow bathers until the residual has decreased. Spa Brite dissolves instantly, will not affect stabilization or cause "clouding" of water.
