

DIRECTIONS FOR USE

Use Moderns Kill on broadleaf weeds and other vegetation in non-crop areas. Moderns Kill is a non-selective herbicide. For application, use a backpack sprayer or other equipment with application nozzle to spray the entire area. For best results, treat shortly before or at the start of plant growth begins. Adequate control is possible when the vegetation is short or just after a rain. If possible, water 24 hours after application will move the material to the root zone and speed up control. Effectiveness and length of control will last will depend on the amount of rain and soil conditions.

NOTE: Do not apply to lawns or near croplands, lawns, or other desirable plants or to areas where their roots may extend. **DO NOT** contaminate domestic water supplies. **DO NOT** allow contact with fertilizers, insecticides, fungicides or seed. Application equipment should be thoroughly cleaned with a detergent and water to prevent corrosion. Equipment which has been used to apply this product should not be used for applying insecticides, herbicides, fertilizers or other agricultural chemicals as plant injury may result. Do not contaminate irrigation or domestic water supplies.
