

e-z-kil all weather rat killer

E-Z-Kil works where conventional bait would be too dry, too hard to handle, or unavailable. They can be used directly on the ground, lake river bank, railroad tracks, loading areas, in or around rat holes, under grainieries, fences, perimeter baiting around fields, garbage dumps, etc.

E-Z-Kil can also be used inside of buildings and protected areas where humidity and moisture is a problem.

RATS

1. E-Z-Kil should be placed in bait stations.
2. Bait placements must be checked daily to make sure that an uninterrupted supply of bait is available for a period of not less than 15 days. Continue baiting until all signs of feeding have stopped. Bait placements should be 20 to 30 feet apart.
3. It is suggested that some bait placements be kept on a permanent basis to prevent a new colony from starting, after control is achieved, from a migrating rat.
4. E-Z-Kil contains "table grade" ingredients and is sized especially favored by rodents in a manufacturing process of cereal foods, and to keep them fresher longer. Control can be achieved without messy and dangerous traps.
5. For best results, keep the bait in the closed container and free from odors that might contaminate the bait so it would reduce acceptance.

CAUTION: Protect from children, pets, domestic animals and wild life. Baits should be placed in areas inaccessible to children, pets, wild life and domestic animals or in tamper-proof bait boxes. In case of ingestion by humans, call physician. Treat by administering vitamin K and otherwise as for overdose of Dicumarol.
