**DIRECTIONS**

How to Use Die Rat and Mouse Bait

FOR RATS - Put 4 ounce amounts of the bait on clean pasteboard or in bait boxes. Place the baits in locations frequented by the rats or near where the rats normally feed. Protect the baits from children, dogs, cats, wildlife and livestock by means of bait boxes or cages where necessary.

Replace the bait as it is consumed until a complete lack of feeding is noted. This should be uninterrupted up to 15 days. Put the baits into clean dry places to avoid souring and decomposing. BE SURE that you have enough bait on hand to complete a CONTINUOUS FEEDING program.

CONTINUOUS FEEDING is what gives you control.

FOR MICE - Follow the same general directions as for rats except that more bait placements should be made throughout the infested areas.

Mice will not travel as far for food as rats. All baits should be made smaller in size if 1 to 2 tablespoons but should not be placed over 6 to 12 feet apart over the area.

**IMPORTANT NOTICE**

RAT BAIT induces a fatal hemorrhage rather than acute poisoning. A SINGLE FEEDING IS NOT FATAL. CONTINUOUS FEEDING OVER A PERIOD OF DAYS HOWEVER IS FATAL. BE SURE AND CONTINUE UNINTERRUPTED BAITING UNTIL A COMPLETE LACK OF BAITS OR FEEDING IS NOTED. THIS USUALLY TAKES FROM 10 TO 15 DAYS. DO NOT USE BAITS OR FEEDING IN CASES WHERE A HUMAN IS PRESENT.

**UNCONDITIONAL GUARANTEE**

If you follow directions, rats and mice will turn.

**CAUTION:**

Protect children, pets, wildlife and domestic animals from bait. If swallowed by humans, domestic animals, wildlife or pets, this material may reduce the clotting ability of the blood and cause bleeding. In such case, intravenous and oral administration of vitamin K combined with blood transfusions are indicated as in the case of hemorrhage caused by overdoses of bishydroxycoumarin.

This rodenticide contains warfarin, an anticoagulant chemical that reduces the clotting ability of the blood and, upon repeated feeding, causes fatal hemorrhage in rats and mice. It also contains Anti-K, an antibacterial agent which inhibits bacteria that produce vitamin K, an antidote for warfarin.

Baits should be placed in areas not accessible to children, pets, wildlife and domestic animals or in tamper-proof bait boxes.

Do not reuse empty container. Destroy it by burying with waste or burning. Stay away from smoke or fumes.

**NOTICE:** Seller warrants that this product conforms to the ingredient statement on the label. Since conditions of use, such as weather, compatibility with other chemicals, and conditions of application equipment, will vary, Seller makes no claims other than those stated on this label.
