Poly[oxyethylene(dimethyliminio)ethylene(dimethyliminio)-	
ethylene dichloride]	30 percent
Inert ingredient	70 percent
Weight per gallon	8.9 pounds
Weight of active ingredient per gallon	2.67 pound

APPLICATION

Sarine B1 30 is used to control algae, bacteria, and fungi in recirculating commercial and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algal growth, microbiological slime and other deposits. An initial slug addition of 2.00 to 5.00 fluid ounces of Sarine B1 30 per 1,000 gallons of water, to provide a concentration of 16 to 40 parts per million of Sarine B1 30 based on the total weight of water in the system is recommended. Subsequent slug additions of 0.50 to 5.00 fluid ounces of Sarine B1 30 per 1,000 gallons of water (4 to 40 parts per million of Sarine B1 30) should be employed every 2 to 5 days or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the microbiological problem. Slug additions should be made in the sump of water cooling towers.
