## DIRECTIONS FOR USE

Best defoliation occurs on cotton when the nitrogen and moisture content of the plant are nearly or completely exhausted. It is better to apply defoliant late to insure a higher yield of better quality fiber. At least 75 percent and preferably 85 to 90 percent of the bolls should be open at the time of application. Youngest bolls expected to make cotton should be at least 30 days old. The recommendations of your State Agricultural Experiment Station or State Agriculture Extension Service should be followed.

FOR AIRPLANE APPLICATION: Apply 2-2½ gallons of COTTON DEFOLIANT in 10-15 gallons of water per acre. FOR GROUND APPLICATION: Apply 2-2½ gallons of COTTON DEFOLIANT in 15-30 gallons of water per acre. The defoliant must be distributed uniformly to cover every leaf to obtain best results. Use of coarse spray nozzles is recommended. Satisfactory defoliation is usually secured with one application; however, with dense cotton a second may be required.

Do not apply within 7 days of harvest. Do not graze treated areas or feed gin waste to livestock.

Wash spray equipment thoroughly after each use. Empty container must be thoroughly washed and decontaminated before reuse. Store in original container. Do not contaminate feed and foodstuffs.

Do not contaminate water by cleaning of equipment, or disposal of wastes. Apply this product only as specified on this label.

Do not reuse empty drums. Return to drum reconditioner or destroy by perforating or crushing and burying in a safe place away from water supplies.

IF SWALLOWED

In case of contact, flush with plenty of water for 15 minutes. Do not induce vomiting unless directed to do so by a physician. Do not eat or drink anything before reuse.

Apply to all cotton vegetation. Spray, or broadcast. Do not apply to other crops.

NO WARRANTY OF MERCHANTABILITY, EXPRESS OR IMPLIED, IS EXTENDED BEYOND THE STATEMENTS MADE ON THIS LABEL.
