

11694-66

EXPEL

TOTAL RELEASE AEROSOL

FOR

Bees, Fleas, Flies, Gnats, Roaches, Spiders, Bed Bugs,
Ants, Moths, Mites, Flea & Bed Bugs

Flies, Gnats, Stroked Stroked, Fleas, Mosquitoes, Gnats,
Mites, Moths, Wasps, Beetles, Bed Bugs, Flea & Bed Bugs,
Spiders and Centipedes

Active Ingredients

1.5% Benzyl Alcohol, 1.5% Ethyl Alcohol	1.000
2-methyl-1-propanol	0.068
ethanol	85.000
glycerin	13.750
isobutyl alcohol	0.000

Inert Ingredients

1.5% benzyl alcohol, 1.5% ethyl alcohol	1.000
2-methyl-1-propanol	0.068
ethanol	85.000

Net Weight 16 oz.

EPA Reg. No. 11694-66
EPA Est. Reg. No. 11694-KS-1

CAUTION: Keep Out of Reach of Children
Contents Under Pressure
See side panel for further precautions

Directions For Use

Always spray from about 6 feet from the treated surface. Do not spray directly on food or drink. Do not spray on pets or animals. Do not spray on plants.

Please stand upright when spraying. Hold can beneath the arm to elevate the tip of the aerosol nozzle. Do not knock or open can. Do not spray directly in the face and eyes when released. Do not allow spray particles to enter eyes. Do not discharge spray away from the bottom of the can. Use one 5 oz. can for up to 4,000 cubic feet of indoor treated area.

Flies, Mosquitoes, Gnats and Moths (Millers)

For best results first spray distant rooms by making spray at low ceiling and filling the room with mist usually 4-6 seconds per 1,000 cubic feet. Enter of unobstructed treated thermal valves per treatment and keep the door closed for 2 hours before opening. Open doors and windows to air the room before reentry. Repeat where necessary.

Roaches, Earwigs, Grain Mites, Sowbugs, Spiders and Centipedes

Spray directly on the insects where possible. Spray thoroughly on all surfaces including cracks, crevices, moist areas, open drain traps, pipes, baseboards, corners, baseboards and door frames. **Important:** Do not use immediately after a telephone call and do not use the day after a total release treatment.

CAUTION: Honeybees, Ants and Fleas may be attracted to the spray. Do not use if possible. If a spray plant is to be sprayed, turn off sprayer and the heat and air control during treatment. All other plants should be sprayed at a different time. Many bees, butterflies, dragonflies, spiders, bats and other beneficial insects are attracted to the spray. Patients should be removed from the spray. If spray gets on patient's skin, wash off with soap and water. If spray gets in eyes, flush with water.

WARNING: Contents under pressure. Do not puncture can. Do not expose to temperatures above 120°F. Manufactured by
