**INERT INGREDIENTS:..... 80.49%

100.00%

*Equivalent to 14.11% (butylcarbamyl) (3-propyl phenoxyl) ether and 3.54% related compounds.

**Contains petroleum distillates.

KEEP OUT OF REACH OF CHILDREN

CAUTION

See side panel for additional precautions.

11/14/75 J.L. Av.

Speer Sequential Aerosol Insecticide is designed for use in automatically-timed discharging devices. Using the metered valve provided, which gives a dosage of 100 mgs. set to discharge every fifteen minutes, one unit will control flies, mosquitoes, gnats and flying moths in an area of approximately 6,000 cubic feet. Factors such as shape of area, temperature, humidity and air currents all affect insect activity and may modify the exact area protected. Insect control will build up within 2 hours after unit is in operation. Used as described, this unit contains sufficient insecticide to operate 24 hours a day for 30 days. This will provide for monthly replacement. Any remaining contents may be used manually.

To use manually, remove cap and direct spray of flies or other insects, pressing actuator button repeatedly. To treat entire area, close windows and doors and press actuator button 7 times per 1,000 cubic feet of space while moving about to distribute the spray in the upper portion of the room. Keep room closed for 15 minutes and ventilate before reoccupying.

Food should be removed or covered during treatment. All food processing surfaces should be covered during treatment or thoroughly cleaned before using. When using the product in these areas, apply only when the facility is not in operation.
