Uniformly spray 2 1/2-3 gals. per 1,000 sq. ft. of soil surface undiluted (100-120 gals. per acre.) Thoroughly wet all foliage to insure contact action. Best results are obtained when applications are made during or after weed emergence while growth is succulent. Where vegetation is tall and dense, use 5 gals. per 1,000 sq. ft. (200 gals. per acre). For control of hard-to-kill perennial weeds and grasses such as johnsongrass, bindweed, and wild carrot, use 8-12 gals. per 1,000 sq. ft. Although HOUDINI Non-Selective Vegetation Killer has considerable activity through foliar contact, much of its activity is through the roots and, therefore, adequate rainfall to move the chemical into the root zone is necessary.

Under conditions where the rainfall is high and the growing season long, a second application may be necessary to maintain a weed-free soil surface.

Care must be taken to keep this herbicide away from desirable flower beds, lawns and shrubs. Do not apply over roots of valuable trees or woody ornamental plants. Only apply herbicide outside the dripline of trees. Avoid spray drift to desirable plants.

### IMPORTANT

Read the entire directions for use and the Conditions of Sale and Warranty before using this product.

Since weather and other conditions under which this product may be used will vary, the Seller makes no warranty of any kind, express or implied, concerning the use of this product. The user assumes all risks of use or handling not in accordance with directions or suggestions.

ACCEPTED
