DIRECTIONS

NORWAY AND ROOF RATS Place 4 to 16 oz. of ERAZE bait in stations next to burrows, in runways, along walls, or where rats are accustomed to feed. Assure an uninterrupted supply of bait for a period of not less than 10 days and continue baiting until all signs of feeding have stopped.

Placing bait stations in concealed locations where rats and mice can feed unobserved is desirable.

HOUSE MICE Place 1/2 to 1 oz. of ERAZE bait in stations (8 to 12 feet apart) where mice or signs of mice have been seen. Assure an uninterrupted supply of bait for a period of not less than 15 days. If infestation is heavy, up to 2 oz. of bait may be placed per station.

Replace stale, damp or moldy bait with fresh bait stations.

This rodenticide contains Warfarin, an anticoagulant chemical that reduces the clotting ability of the blood and upon repeated feedings, causes hemorrhage in rats and mice. It also contains an antibacterial agent which inhibits bacteria that produces Vitamin K, an antidote for Warfarin.

CAUTION

Treated baits should be placed in locations not accessible to children, pets, wildlife and domestic animals, or in tamper-proof boxes. Do not contaminate water by cleaning of equipment, or disposal of wastes. Apply this product only as specified on this label.

Do not reuse empty container, destroy it by burying with waste or burning. Stay away from smoke or fumes.

If swallowed by humans, pets, domestic animals or wildlife, this material may reduce the clotting ability of the blood and cause bleeding. In such cases, intravenous and oral administration of Vitamin K combined with blood transfusion are indicated as in the case of hemorrhage caused by overdoses of bishydroxycoumarin. In case of ingestion, call a physician.
