Mr. Craig Riekena Bell Laboratories, Inc. 3699 Kinsman Blvd. Madison, WI 53704

August 24th, 2022

Label Amendment- Extending the Expiration Date for the Supplemental Label for Subject:

> Midway Atoll Use by USFWS Product Name: Agrid₃ Pellets

EPA Registration Number: 12455-117 Application Date: June 8th, 2022

Decision Number: 585474

Dear Mr. Riekena:

The supplemental label referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide and Rodenticide Act, as amended, is accepted. This supplemental label pertains only to use to control house mice on Midway Atoll by the U.S. Fish and Wildlife Service. This approval does not affect any conditions that were previously imposed on this registration. You continue to be subject to existing conditions on your registration and any deadlines connected with them.

By itself, this supplemental label does not constitute the complete set of use directions that have been accepted for this product. The Directions for Use section for this product appears on the labeling that was accepted on April 19th, 2016

The supplemental label expiration date has been extended until December 31st, 2023.

Your release for shipment of the product constitutes acceptance of these conditions. If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA section 6. If you have any questions, please contact Scott Campbell by phone at via email at Campbell.Scott@epa.gov.

Sincerely,

Venus Eagle, Product Manager 01 Invertebrate and Vertebrate Branch 3 Registration Division (7505T) Office of Pesticide Programs

Enclosure: Stamped Supplemental Label

ACCEPTED

Aug 24, 2022

Under the Federal Insecticide, Fungicide and Rodenticide Act as amended, for the pesticide registered under EPA Reg. No. 12455-117

SUPPLEMENTAL LABEL AGRID₃® PELLETS

EPA REG. NO. 12455-117

This supplemental label expires on December 31, 2023 and must not be used or distributed after that date.

DIRECTIONS FOR USE

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling. •
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Agrid₃® Pellets before applying this product.
- Use of Agrid₃® Pellets must adhere to the requirements of the ESA Section 7 Assessment for Midway Atoll National Wildlife Refuge, dated December 16, 2016.
- Use of Agrid₃® Pellets according to this supplemental label is subject to the use precautions and limitations imposed by the label affixed to the container for Agrid3® Pellets, EPA Reg. No. 12455-117.

THE DIRECTIONS IN THIS BOX PERTAIN ONLY TO USE OF THIS PRODUCT BY U.S. FISH AND WILDLIFE (FWS) PERSONNEL OR THOSE UNDER DIRECT SUPERVISION BY THE FWS FOR THIS ACTIVITY TO CONTROL HOUSE MICE ON MIDWAY ATOLL

USE RESTRICTIONS: This product may only be used on Midway Atoll to control house mice (Mus musculus) at locations where they pose a threat to listed species or birds native to the atoll. The bait must be applied in tamper-resistant bait stations or broadcast manually according to the **APPLICATION DIRECTIONS** shown below. Protect bait from exposure to ultraviolet (UV) light, including direct sunlight, prior to use.

APPLICATION DIRECTIONS:

Bait Stations:

Deploy and secure tamper-resistant bait stations at intervals of approximately 5 to 10 m (~16 to 33 feet) to create a grid of bait stations over an 80-m-by-80-m area (6400 m² or ~69,000 ft²) surrounding the nest and/or area to be protected. (With 5-m spacing, the grid will be 17 stations by 17 stations. With 10-m spacing, the grid will be 9 stations by 9 stations.) Do not apply bait to any portion of the grid area that extends to or beyond coastline areas below the mean high water mark or where surface water is present. Load ¼ to ½ ounce (1-2 tablespoons) of bait into each bait station. Up to one ounce (4 tablespoons) of bait may be loaded into stations situated at points of very high mouse activity. Maintain an uninterrupted supply of bait in the stations for 15 days or until there no longer are fresh signs of house mouse activity in the center of the grid and/or the next or resting place no longer is being used by the species to be protected.

Manual Application:

Scatter \(\frac{1}{4}\) to \(\frac{1}{2}\) ounce (1-2 tablespoons) of bait every 5-m (16 feet) in an 80-m-by-80-m area (6400 m² or ~69,000 ft²) surrounding the next and/or area to be protected. If house mouse populations are extremely high, up to 3 ounces of bait may be hand-broadcasted every 5-m. Do not apply bait to any portion of the grid area that extends to or beyond coastline areas below the mean high water mark or where surface water is present. Inspect treated areas every 1 or 2 days to determine whether bait is still present and is not being fed upon extensively by nontarget species. Make additional applications using the same procedure if mice are still present and taking bait. Maintain an uninterrupted supply of bait for 15 days or until there no longer are fresh signs of house mouse activity in the center of the grid and/or the nest or resting place no longer is being used by the species to be protected.
