NET WT. LBS. MICROBIOCIDE-K

APPLICATION

Microbiocide-K is used to control algae, bacteria and fungi in recirculating commercial and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algal growth, microbiological slime and other deposits. An initial slug addition of 3.9 to 9.75 fluid ounces of Microbiocide-K per 1000 gallons of water, to provide a concentration of 32 to 80 parts per million of Microbiocide-K based on the total weight of water in the system is recommended. Repeat until control is achieved.

Subsequent slug additions of 1.0 to 9.75 fluid ounces of Microbiocide-K per 1000 gallons of water (8 to 80 parts per million of Microbiocide-K should be employed every 2 to 5 days or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the microbiological problem. Slug additions should be made in the sump of the cooling tower.
