Fountains, Small Ponds with goldfish and koi - Treat only those fountains and ponds which will have no outflow after treatment. High water temperatures cause more rapid natural decay of dead algae which can cause fish distress. If animals are present clean out excess algae as stated above or use before temperature exceeds 75°F (24°C). CAUTION: In ponds insure that water is well aerated via waterfall, fountain or other method to prevent fish loss. Aeration must be continuous. Caution: Not safe for use with snails, shrimp, clams and other crustaceans, or mollusks. Repeat dosage once per week for maintenance. To figure capacity of fountain or pond; Length x Width x Depth = cubic feet x 7.5 = gallons.
