

DANGER

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
Corrosive. Causes eye damage. May be fatal if swallowed. Do not get in eyes, on skin, or on clothing. Irritating to nose and throat. Avoid breathing dust. May cause burns to skin. Wear goggles or face shield and protective clothing when handling. Wash hands after handling.

FIRST AID PRACTICAL TREATMENTS:
If swallowed: Need prompt medical attention. If swallowed, do not induce vomiting. If on skin, remove contaminated clothing and flush skin with cold water for at least 15 minutes. For eyes: Get medical attention as soon as possible. Remove and wash contaminated clothing before reuse.

CHEMICAL HAZARDS
Strong oxidizing agent. Do not use moist or damp utensils. Contamination with moisture, dirt, organic matter, or other chemicals, or any foreign matter, may start a chemical reaction with generation of heat, liberation of hazardous gases, and possible generation of fire.

ENVIRONMENTAL HAZARDS
This pesticide is toxic to fish. Keep out of lakes, streams, ponds, or public waters. Permits must be required for discharge of this pesticide into public waters. For guidance contact the regional office of the Environmental Protection Agency.

SPECIAL PRECAUTIONS (PLEASE READ)

1. This product has a powerful chlorine odor. Hold away from face when opening to avoid breathing fumes.
2. Prolonged contact between this product and undissolved solids and vinyl liners or painted surfaces will result in bleaching of the vinyl or paint.
3. When adding this product to skimmer or feeder make sure there are no other chemicals present as a violent reaction may occur. It is always dangerous to mix chemicals.
4. Use this product as directed as per instructions on label. Do not take advice from others or experiment by yourself.
5. If this product is used to shock or superchlorinate a pool after bromine is important to brush walls and floor to expose algae that may be in cracks or wrinkles that might protect algae from high chlorine residual. Such protected algae will begin to reproduce again when high chlorine residual falls.
6. This product, because of its potent formulation, can be dangerous if not used properly. Do not mix with any other chemicals. This could result in a violent chemical reaction. Do not add water to this product in a closed container. Do not add this product to a small amount of water in a pail. When adding this product to skimmer make sure pump is on and water is circulating so that material is drawn into recirculation system. Do not allow build up of dry material in skimmer as gases may generate and cause an explosion.

Aqua Clear

Slo-Tabs (Concentrated Chlorinating Tablets)

ACTIVE INGREDIENTS

Trichloro-s-triazine
Sodium Dichloro-s-triazine

KEEP OUT OF REACH OF CHILDREN
DANGER

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

1. Adjust water pH to 7.2-7.6 as determined by a test kit. For pools with copper plumbing best pH factor is 7.6-7.8.
2. If the pool has not been previously stabilized, add conditioner and stabilizer to pool water. Follow the directions for use on the label for that product.
3. Secure chlorinator in the area of pool that is agitated by return flow from filter. If residual remains too high, chlorinator should be moved further from the agitated area which will slow the dissolving action of the tablets.
4. In newly filled pools, follow steps 1 through 5, then add 2 tablets per 5000 gallons of pool water to establish a chlorine residual of 1.0 to 1.5 ppm as determined by a test kit. Repeat dosage as needed to maintain a residual of 1.0 to 1.5 ppm at all times. Thereafter, add 1 tablet per 5000 gallons per week or as needed to maintain a residual of 1.0 to 1.5 ppm at all times as determined by a test kit.
5. For pools with stabilizer, follow steps 1 and 3, then add 1 tablet per 5000 gallons per week or as needed to maintain a chlorine residual of 1.0 to 1.5 ppm at all times as determined by a test kit.

Please Note: The pH of 7.2-7.6 slow dissolving chlorinating tablets on the acid side and will tend to reduce the pH and alkalinity of the pool water. Proper pH should be maintained at pH 7.2 to 7.6 as determined by a test kit. Periodic additions of sodium carbonate or sodium bicarbonate.

STORAGE AND DISPOSAL

Keep product dry in a tightly closed container when not in use. Store in a cool dry, well ventilated area away from heat or open flame. In case of decomposition, isolate container in an open area if possible and flood with large amounts of water. Do not reuse empty container. If empty container is thoroughly wet with water, place empty container in a plastic bag and place in trash collection or dispose in approved landfill area or bury in a safe place.
