

CAT FLEA COLLAR

ISOLATED CAT FLEA COLLAR

AIDS IN TICK CONTROL

ISOLATED INSECTICIDE COLLAR KILLS FLEAS FOR THREE MONTHS

COMPOSITION: ACTIVE INGREDIENTS:

2,2-dichlorovinyl dimethyl phosphate	18.0%
<i>(this ingredient statement applies to the DDVP resin strip inside collar)</i>	
Related compounds	1.4%
INERT INGREDIENTS:	80.0%
TOTAL	100.0%

This Collar is a real Collar which gives your Cat protection against Fleas. The insecticide is isolated from the skin of the animal. Since the insecticide evaporates through holes only towards the outside of the neck of the animal, it provides no direct contact between the insecticide and the animal. The Isolated Insecticide Collar does not necessitate that the pet owners or children touch the insecticide, as it is only found on the inside of the Collar.

DIRECTIONS FOR USE: Open the envelope and fasten the Isolated Collar around the neck of the Cat. Cut off any excess band. Cats occasionally object to wearing a Collar. Fleas are killed as soon as

the Collar is in position, and new ones will also be killed. The Isolated Collar lasts up to 3 months, replace when effectiveness diminishes.

CAUTION: Do not open envelope until ready for use. Collar is intended for use only as an insecticide generator and is not to be taken internally by humans or animals. Animals should not be allowed to chew on the Collar. The insecticide in the Collar is isolated with no direct contact to the skin. Thus, skin irritation is generally avoided. If skin irritation should occur, remove Collar at once. Do not use on Persians. Do not use on sick or convalescing cats. Do not use any other pesticide on Cat while Collar is worn.
