DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

WTC 0501 is used to control bacteria, algae, and fungi in recirculating commercial and industrial air wash systems. Upon its use, systems must be cleaned to remove slimes, and other deposits. An initial slug addition of 32 fluid ounces of WTC 0501 per 1000 gallons of water to provide a concentration of 32 parts per million of WTC 0501 is recommended. Repeat initial dosages of 1.0 to 1.0 per 1000 gallons of water should be employed every 2 to 5 days, or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the bacterial problem. Slug additions should be made in the sump of air-washing systems that maintain effective mist. Upon its use, systems should be cleaned to remove deposits. An initial slug dose of 14.8 to 14.8 per 1000 gallons of water should be employed each time. Repeat initial dosage until control is effected. A dosage of 10.1 to 24.7 fluid ounces of WTC 0501 per 1000 gallons of water should be employed each time. The frequency of addition depends upon the relative amount of bleedoff and the severity of the bacterial problem. Slug additions may be made in the collection trays of the airwash system.
