Comment

BA-1010

DIRECTIONS FOR USE

BA-1010 is used to inhibit the growth of algae, bacteria, and fungi in recirculating commercial and industrial cooling water systems. Before treatment with BA-1010 systems must be cleaned to remove algal growth, microbiological slime, and other deposits. Then the system should be treated with an initial slug addition of 5.1 to 10.2 fluid ounces of BA-1010 per 1,000 gallons of water in the system. Repeat the initial dosage until control is evident. Subsequent slug additions of 1.7 to 10.2 fluid ounces of BA-1010 per 1,000 gallons of water should be made every 1 to 5 days or as needed. The required frequency of treatment depends on the relative amount of bleedoff and the severity of the microbiological problem. Slug additions of BA-1010 should be made to the sump of water cooling towers.

EPA Reg. No. 17866-5

COMPOSITION

	Percent by Weight
Active ingredients.....	11.66%
Disodium cyanodithioimidocarbonate.....	4.90%
Potassium N-methyldithiocarbamate.....	6.76%
Inert ingredients.....	88.34%
Weight per gallon —	8.88 pounds
Weight of active ingredients per gallon —	1.03 pounds
