NOTE TO PHYSICIAN: There is no specific antidote for atrazine. If this product is ingested, induce emesis or lavage stomach. The use of an aqueous slurry of activated charcoal may be considered.

# PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS CAUTION: HARMFUL OR FATAL IF SWALLOWED. Avoid breathing of dust. Do not take internally. Causes moderate eye imitation. Avoid contact with eyes, skin or clothing.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers (other than mixers and loaders) must wear:

Long-sleeved shirt and long pants

Waterproof gloves

Chemical-resistant footwear plus socks

Mixers and Loaders must wear:

Long-sleeved shirt and long pants

Waterproof gloves

Chemical-resistant footwear plus socks

Protective eyewear

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry,

This product may not be mixed/loaded, or used within 50 feet of all wells including abandoned wells, drainage wells, and sink holes. This product may not be mixed or loaded within 50 feet of intermittent streams and rivers, natural or impounded lakes and reservoirs. This product may not be applied aerially or by ground within 55 feet of the points where field surface water runoff enters perennial or intermittent streams and rivers or within 200 ft, around natural or impounced takes and reservoirs. If this product is applied to highly ergdible land, the 55 foot buffer or set-back from runoif points must be planted to crop or seeded with grass or the planted to highly ergdible land.

## other suitable crop. GENERAL INFORMATION

HERBICIDE I will control most annual broadleaf and grass weeds in com, sorghum, and certain other crops as specified on this label such as barnyard grass, witchgrass (Panicum capillare), yellow foxtail, green foxtail, wild oats, large (hairy) crabgrass, giant foxtail, velvetleaf, morninggiory, lambsquarters, pigweed, ragweed, nightshade, purslane and mustard. HERBICIDE I may be applied before or after weeds emerge. In each case where a range of rates is given, the lower rate should be used on coarse textured soil and soil low in organic matter, and the higher rate should be used on fine textured soil and soil high in organic matter. Following many years of continuous use of this product and chemically related products, biotypes of some of the weeds listed on this label have been reported which cannot be effectively controlled by this and related herbicides. Where this is known or suspected and weeds controlled by this product are excerned to be present along with resistant biotypes, we recommend the use of this product in combinations or in sequence with other registered heroicides which are not triazines. If only resistant biotypes are expected to be present, use a registered non-triazine herbicide. Consult with your state Agricultural Extension Service for specific recommendations.

> Manufacured By: Drexel Chemical Company P.O. BOX 13327, MEMPHIS, TN 3113-0327

Since HERBICIDE I acts mainly through root absorption, its effectiveness depends on rainfall or irrigation to move it into the root zone. Should weeds develop, a shallow cultivation or rotary hoeing will generally result in better weed control.

HERBICIDE I is non-flammable.

Care should be taken to avoid using HERBICIDE I near adjacent desirable plants or in greenhouses or injury may occur.

To avoid spray drift, do not apply under windy conditions. Avoid spray overlap, as crop injury may result.

Note: The Seller does not recommend the use of HEREICIDE1 in combination with other herbicides or oils except as specifically described on the label or in literature published by the Seller.

FAILURE TO FOLLOW ALL PRECAUTIONS ON THIS LABEL MAY RESULT IN POOR WEED CONTROL, CROP INJURY, OR ILLEGAL RESIDUES. APPLICATION PROCEDURES

GROUND APPLICATION:

Use conventional ground sprayers equipped with nozzles that provide accurate and uniform application. Be certain that nozzles are uniformly spaced and are the same size. Calibrate sprayer before use and recalibrate at the start of each season and when changing carriers. Unless otherwise specified, use a minimum of 10 gallons of spray mixture per acre for all pre-plant surface, pre-emergence, and post-emergence applications with ground equipment.

Use a pump with capacity to: (1) Maintain 35-40 psi at nozzles; (2) Provide sufficient agitation in tank to keep mixture in suspension; and to (3) Provide a minimum of 20% bypass at all times.

Use centrifugal pumps which provide propeller shear action for dispersing and mixing this product. The pump should provide a minimum of 10 gallons/minute/ 100 gallon tank size circulated through a correctly positioned sparger tube or jets. Use screens to protect the pump and to prevent nozzles from dagging. Screens placed on the suction side of the pump should be 16-mesh or coarser. Do not place a screen in the recirculation line. Use 50-mesh or coarser screens between the pump and boom, and where required, at the nozzles. Check nozzle manufacturer's recommendations.

For band application, calculate the amount to be applied per acre as follows: band width in inches x broadcast rate = amount needed row width in inches per acre per acre in field

AERIAL APPLICATION:

Use aerial application only where broadcast applications are specified. Apply in a minimum of 1 qt, of water for each quart of HERBICIDE | applied per acre. For post-emergence treatments on com and scriphum, apply recommended rate in a minimum of 2 gal, of water/A. Avoid applications under conditions where uniform

coverage cannot be obtained or where excessive spray drift may occur. HERBICIDE I IN WATER APPLICATIONS

HERBICIDE I, a liquified formulation, should be mixed with water and applied as a spray. Pour HERBICIDE I into the tank curing or after filling. Hydraulic (jet) or mechanical agitation is recommended during mixing and application to keep the materials in suspension. All return lines to the tank must discharge below liquid level and agitation should not be so violent as to cause air bubbles to form in the

Rould. Wash sorayer thoroughly after use

MIXING PROCEDURES (All Uses):

1) Be sure sprayer is clean and not contaminated with any other materials or crop injury or sprayer clogging may result. 2) Fill tank ½ full with clean water. 3) Start agitation. 4) Be certain that the agitation system is working properly and creates a rippling or rolling action on the liquid surface. 5) Pour product directly from container into tank. 6) Finish filling tank. 7) Empty tank as completely as possible before refilling to prevent buildup of residue. Maintain agitation to avoid separation of materials. 8) Clean sprayer thoroughly immediately after use by flushing system with water containing a detergent.

DIRECTIONS FOR USE

It is a violation of federal faw to use this product in a manner inconsistent with its labeling.

Do not apply this product through any type of irrigation system.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulations.

#### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170, This Standard contains requirements for the protection of agricultural workers on farms, forests, nucleons, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), notification to workers, and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (Reentry Interval—12 hours).

Personal Protective Equipment required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water is: Coveralls, Waterproof gloves, Chemical-resistant footwear plus socks and

Protective eyewear

FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL MAY RESULT IN POOR WEED CONTROL, CROP INJURY, OR ILLEGAL RESIDUE

ROTATIONAL CROPS-ALL USES

- Land treated with HERBICIDE I should not be planted to any crop except com or sorghum until the following year or injury may occur.
- 2. If HERBICIDE is applied after June 10, do not rotate with crops other than com or sorghum the next year or injury may cocur.
- 3. In the High Plains and Intermountain area of the West where rainfall is sparse and enatio or where imigation is required, use HERBICIDE I to control weeds in com only when com is to follow com or a crop of untreated com, or sorghum is to precede other rotational crops.
- 4. In Western Minnesota and Eastern parts of the Dakotas, Nebraska and Kansas, com treated with HERBICIDE I should not be followed with soybeans if the broadcast rate applied was more than 4 pts, per acre (or comparable rate in a band) or injury may occur.
- Injury may occur to soybeans planted in North Central Iowa and South Central Minnesota the year following an HERBICIDE Lapplication on Harps, Canisteo, Stroden or other soils having a calcareous surface layer.
- Do not plant sugar beets, tobacco, vegetables (including dry beans), springseeded small grains or small seeded legumes and grasses the year following HERBICIOE 1 application or injury may occur.

Partial control only

<sup>1</sup>Partial control only on medium and fine-textured soils Where there are state/local requirements regarding HERBICIDE I use (including lower maximum rates and/or set-backs) which are different from the label, the

more restrictive/protective requirements must be followed.
 Certain states may have established rate limitations within specific geographical

areas. Consult your state lead pesticide control agency for additional information. It is a violation of this tabel to deviate from state regulations. CORN

HERBICIDE I may be applied either before planting, at planting, or after planting as indicated below.

Pre-plant Surface-Applied (Broadleaf and Grass Control):

Use on medium and fine textured soils with minimum tillage or no tillage systems only in CO. IL, IN, IA, KS, KY, MN, MO, MT, NE, NÖ, SD, WI, WY, Apply the recommended rate of HERBICIDE I shown in Table 1 up to 30 days prior to planting. On coarse-textured soils, do not apply more than two weeks prior to planting.

Note: To the extent possible, do not move treated soil out of the row or move untreated soil to the surface during planting, or weed control will be diminished. PRE-EMERGENCE OR AT PLANTING (Broadleaf and Grass Weed Control):

Apply during or shortly after planting prior to weed emergence at the rate indicated in Table 1.

POST-EMERGENCE (Broadleaf and Grass Weed Control):

Apply before weeds exceed 1.5 inches in height before corn exceeds 12 inches in height at rate recommended in Table 1.

TABLE 1

#### For Control of Broadleaf and Grass Weeds

FOR ALL SOIL APPLICATIONS PRIOR TO CROP EMERGENCE

On Highly Erodible Soils

(as defined by the Soil Conservation Service (SCS)

If conservation tillage is practiced, leaving at least 30% of the soil covered with plant residues at planting, apply 4 pts /A as a broadcast spray.

If the soil coverage with plant residue is less than 30% at planting, a maximum of 3.2 pts./A may be applied.

On Soils Not Highly Eredible

Apply 4 pts/A as a broadcast spray.

FOR POST-EMERGENCE APPLICATION

If no HERBICIDE I was applied on or to comemergence, apply 4 pts JA broadcast apply. If a post-emergence treatment is required following an earlier herbicide application, the total atrazine applied may not exceed 2.5 lbs, active ingredient (5 pts. of HERBICIDE I) per acre per calendar year.

Broadleaf control (eastern CO, western KS, western NE, NM, OK Pan Handle, west TX, and eastern WY): On sand, loarny sand, sandy loarn, mild to strongly alkaline soil and all recently leveled soil, apply no more than 2.4 pt/A, either preplant or pre-emergence. On other soils in these areas, apply rate in Table 1 for broadleaf and grass control.

Where there are state/local requirements regarding atrazine use (including lower maximum rates and/or set-backs) which are different from the label, the more restrictive/protective requirements must be followed. Certain states may have established rate limitations within specific geographical areas. Consult your state lead pesticide control agency for additional information. It is a violation of this label to deviate from state use regulations.

SORGHUM AND SORGHUM-SUDAN HYBRIDS (GRAIN AND FORAGE '

Apply before planting, at planting, or after planting. See Corn section for weeds controlled.

Pre-plant Surface-Applied (Broadleaf and grass control): Use on medium-andfine-textured soil with minimum-tillage or no-tillage systems only in CO, IL, IN, IA, KS, KY, MN, MO, MT, NE, ND, SD, WI, WY.

Under dry conditions, impation after application is recommended to move HERBICIDE 1 into the soft.

Note: To the extent possible, do not move treated soil out of the row or move untreated soil to the surface during planting, or weed control will be diminished, PRE-EMERGENCE (BROADLEAF AND GRASS CONTROL)

Apply at rate shown in Table 1 before weeds exceed 1.5 inches in height and before sorghum exceed 12 inches in height.

FOR POST-EMERGENCE APPLICATION

If no HERBICIDE I was applied prior to sorghum emergence, apply 4 pts/A broadcast. If a cost-emergence treatment is required following an earlier herbicide application, the total atrazine applied may not exceed 2.5 lbs. active ingredient (5 pts. of HERBICIDE I) per acre per calendar year.

Do not apply pre-plant in AL, AR, FL, GA, LA, MS, NC, NM, OK, SC, TN, or TX. Do not apply pre-emergence in NM, OK, or TX, except in northeast OK and the TX Guil Coast and Blackland areas.

Where there are state/local requirements regarding atrazine use (including lower maximum rates and/or set-back3) which are different from the label, the more restrictive/protective requirements must be followed. Certain states may have established rate limitations within specific geographical areas. Consult your state lead pesticide control agency for additional information. It is a violation of this label to deviate from state use regulations.

In case of planting failure, sorghum or com may be replanted. Do not make a second broaccest application, or injury may occur. If originally applied in a band and sorghum or com is replanted in untreated row middles, this product may be applied in a band to the second planting.

POST-EMERGENCE (BROADLEAF AND GRASS WEED CONTROL): Apply before weeds exceed 1.5 inches in height at the rate indicated in Table 2. Application may be made up to sorghum reaching 12 inches in height.

#### TABLE 2

Post-emergence Broadleaf and Grass Weed Control in Sorghum

Soil Texture	Minimum Height of Sorghum at Treatment	Broadcast <sup>a</sup> Rate/HERBICIDE 1		
Sand or loamy sand	DO NOT USE			
Sandy Icam		2.4 pts.		
Silt loam to sandy clay loams	Completely emerged	4 pts.		
Olton and Puilman clay soils	At least 6 inches high	4 pts.		
Silly day loams and heavier soils	Completely emerged	4 pis.		

**FOR POST-EMERGENCE APPLICATION** 

If there has been no previous soil application to the crop, the maximum rate is 4 pts, per acre, if there has been a previous soil application to that crop, do not exceed a total of 5 pts, per acre per calendar year.

PRECAUTIONS FOR ALL APPLICATIONS TO SORGHUM

- Post-emergence application to sorghum must be made before sorghum reaches 12 inches in height.
- The maximum application rate for sorghum is 2.5 lbs. HER8ICIDE I per acre per calendar year. Application for quackgrass suppression in sorghum are restricted to a spring application only. No fail applications are permitted.
- 3. Heavy rains immediately following application tend to result in excessive concentrations of herbicide in seed furrow, resulting in possible crop injury. Applications to furrow-planted sorghum should not be made until furrows are leveled (plow-in). Deep planter marks or seed furrows should also be leveled before application.
- Application made to sorghum growing under stress caused by minor element deficiency or to sorghum growing on highly calcareous soils may result in crop injury.
- Do not graze or feed forage from treated areas for 21 days following application or illegal residues may result.
- 6. Following harvest of a treated crop, plow (moldboard or disk-plow) and thoroughly till the soil in the fall or spring to minimize possible injury to rotational spring-seeded crops, regardless of rate used.
- Injury may occur if both this herbicide, pre-plant surface, pre-plant incorporated, or pre-emergence, and an at-planting systemic insecticide applied In-furrow are used.

### Suggestions for Rotational Crops:

See "Suggestions for Rotational Crops" at the end of Com Section CHEMICAL FALLOW

WHEAT-SORGHUM-FALLOW

This treatment controls annual broadleaf and grass weeds following wheat harvest and in the following sorghum crop when grown under minimum tillage. Apply 6 pts. HERBICIDE I to wheat stubble immediately following wheat harvest. If weeds are present, remove them with a sweep plow or other suitable implement after application or use an approved contact herbicide before or after application of HERBICIDE I. Plant sorghum into wheat stubble the following spring with minimum disturbance of the soil. Use a surface planter or a planter feaving a shallow furrow. If weeds are present at planting, remove them with a sweep plow or other suitable implement before planting.

For the list of weeds controlled, see Rotational Crops - All Uses.

- Precautions:
- 1. Use only on silt loam or finer textured soil.
- 2: Wheat-sorghum-fallow cropping sequence must be followed.
- 3. Do not apply following sorghum harvest,

Note: To avoid illegal residues, do not graze or feed forage from treated area to livestock. To avoid illegal residues and crop injury do not plant any crop other than those on this label within 18 months following treatment.

WHEAT-CORN-FALLOW (KS, NE): This product controls cheatgrass (downy brome, chess), kochia, mustards, pigweed, Russian thistle, wild lettuce, wild sunflower, and volunteer wheat during period after wheat harvest. Weed control may extend into (ollowing com crop grown under minimum tillage.

Follow directions for use, notes, and precautions in the "Wheat-Sorghum-Fallow: section above, substituting com for references to sorghum.

WHEAT-FALLOW-WHEAT (CO, KS, MT, NE, ND, SD, and WY): For preemergence and control of cheatgrass (downy brome, chess), common lambsquarters, field pennycress, kochia, mustard, Russian thistle, wild lettuce, and suppression of volunteer wheat during fallow period of a wheat-fallow-wheat rotation, broadcast t to 2 pt/A on all soils except those listed under "Precautions". For control of pigweed and wild sunflower, use the higher rate. Apply to stubble ground. Treat only once during same fallow period.

CONIFERS

For control of annual broadleaf and grass weeds prior to transplanting, after transplanting or in established conifers (Including Douglas fir, grand fir, noble fir, white fir, Austrian pine, bishop pine, Jeffrey pine, knobcone pine, loblolly pine (shore pine), monterey pine, ponderosa pine, Scotch pine, stash pine, blue spruce, and Sitka spruce): Broadcast 4 to 8 pts. in a minimum of 5 gals of water/ acre by air or 10 gals by ground before weeds are 1.5 inches tall. Apply to established trees between fall and early spring while trees are domain. For applications prior to transplanting allow sufficient precipitation to activate atrazine before transplanting.

In areas where spring and summer rainfall is inadequate to activate HERBICIDE I, apply during fall prior to spring transplanting

For the list of weeds controlled, see Rotational Crops - All Uses.

# STORAGE AND DISPOSAL Do not contaminate water, food or feed by storage or disposal.

# STORAGE INSTRUCTIONS:

Store in a cool dry location, Avoid storage at high temperatures, Keep container tightly sealed. Avoid contamination with acids or alkalles. Do not stack more than 2 pailets high to prevent crushing. Keep containers away from any source of puncture. Store in original container only.

Pesticides should be separated during storage to prevent cross contamination of other pesticides, fertilizer, food and feed. Storage area should preferably be locked to prevent admittance by unauthorized or unknowledgeable persons. If the container is damaged and leaking or material has been spilled follow these procedures:

- 1. Cover spill with absorbent material
- 2. Sweep into disposal container.
- Wash area with detergent and water and follow with clean water rinse.
   Do not allow to contaminate water supplies.
- 5. Dispose of according to instructions below.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

CONTAINER DISPOSAL: Triple rinse (or equivalent). Then offer for recycling or reconditioning or puncture and dispose of in a sanitary landfill, or by incineration or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

# WARRANTY-CONDITION OF SALE:

OUR RECOMMENDATIONS FOR USE of this product are based upon tests believed reliable. Follow directions carefully. Timing and method of application, weather and croip conditions, mixtures with other chemicals not specifically recommended, and other influencing factors in the use of this product are beyond the control of the Seller. Buyer assumes all risks of use, storage and handling of this material not in strict accordance with directions given herewith. In no case shall Drexel of the Seller beliable for consequential, special or indirect damages resulting from the use or handling of this product when such use and/or handling is not in strict accordance with directions given herewith. The foregoing is a condition of sale by Drexel Chemical Company and is accepted as such by the Buyer.
