ation of active ingredients and wetting agents to be used for the control of sucker Maryland and Cigar tobacco. The concentrated product is diluted with water to form a coarse spray. The emulsion is effective only when it comes in direct contact with the oiled so that maximum contact is made with the suckers.

tepping. Best results are usually obtained by spraying the tobacco with FAIR 85 before top and then topping the tobacco one week later, removing any suckers that were clare spraying, remove any suckers over one inch in length as you top and apply FAIR

nt, it is necessary to straighten any plants that are leaning so that the emulsion flows ach sucker.

g the day. For best results, it is recommended that you wait until the dew dries before begin to clear in the evening. Because the underside of the leaves may be injured by n the wind is high enough to turn top leaves over. Do not apply during the rain or when r FAIR 85 has been on the plants for over an hour, you should not have to apply FAIR
