# RESTRICTED USE PESTICIDE

Due to Avian and Aquatic Toxicity

For retail sale to and use by certified applicators or persons under their direct supervision and only for those uses covered by the certified

# ACCEPTED

FEB 1 0 2000

Under the Federal Insections, Funcicide, and Rodenticide Act. as amended, for the pesticide redistered under BPA Reg. No. 197/3-9/

# Diazinon

Insecticide

For control of certain insects on fruits, nuts, vegetables, field crops, lawns and ornamentals. This product must not be used on golf courses and sod farms.

# **ACTIVE INGREDIENT:**

Diazinon: [O,O-Diethyl O-(2-isopropyl-6-methyl-4-pyrimidinyl) phosphorothioate] ..... 48.2% OTHER INGREDIENTS\*: ..... 51.8% TOTAL: ..... 100.0% \*Contains xylene range aromatic solvent.

EPA Reg. No. 19713-91 EPA Est. No. 19713-GA-1

# KEEP OUT OF REACH OF CHILDREN CAUTION

See FIRST AID Below SHAKE WELL BEFORE USING

#### FIRST AID

IF SWALLOWED: Call a physician or Poison Control Center immediately, DO NOT INDUCE VOMITING, Vomiting may cause aspiration pneumonia. Do not give anything by mouth if person is unconscious or convulsing

IF INHALED: Remove victim to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. Get medical attention. IF ON SKIN: Wash promptly with soap and water, Rinse thoroughly. Get medical attention.

IF IN EYES: Rinse eyes with plenty of water. Call a physician if irritation persists.

NOTE TO PHYSICIAN: This product is an organophosphate insecticide. If symptoms of cholinesterase inhibition are present, atropine sulfate by injection is antidotal. 2-PAM is also antidotal and may be administered, but only in conjunction with atropine. This product contains a xylene range aromatic solvent which may present an aspiration hazard. Gastric lavage may be indicated if product was taken internally.

Diazinon is an organophosphate insecticide/miticide

## PRECAUTIONARY STATEMENTS

Pazards to Humans and Domestic Animals CAUTION: Harmful if swallowed, inhaled or absorbed through skin, Causes moderate eye injury. Avaid contact with skin, eyes or clothing. Avoid breathing vapor or spray mist, Avoid contamination of food and feed. Food utensils such as table spoons and measuring cups should not be used for food purposes after use in measuring pesticides. Keep out of reach of domestic animals. Do not use on humans, household gets or livestock. Do not contaminate ornamental fish ponds.

(Continued)

#### (Continued)

PERSONAL PROTECTIVE EQUIPMENT (PPE)

WPS USES: Applicators and other handlers who handle this pesticide for any uses covered by the Worker Protection Standard (40 CFR Part 170)-in general, agricultural plant uses are covered-must wear: Long-sleeved shirt and long pants, chemical resistant gloves such as barrier laminate, butyl rubber (greater than or equal to 14 mils), nitrile rubber (greater than or equal to 14 mils), or viton (greater than or equal to 14 mils), shoes plus socks and protective evewear.

NON-WPS USES: Applicators and other handlers who handle this pesticide for any uses NOT covered by the Worker Protection Standard (40 CFR Part 170)-in general, agricultural plant uses are covered-must wear: Long-sleeved shirt and long pants, waterproof gloves, shoes plus socks and protective eyewear.

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

## USER SAFETY RECOMMENDATIONS

Users should: 1) Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. 2) Remove clothing immediately if pesticide gets inside. 3) Then wash thoroughly and put on clean clothing.

### **ENVIRONMENTAL HAZARDS**

This product is highly toxic to birds, fish and other wildlife, Birds, especially waterfowl, feeding or drinking on treated areas may be killed. Because of the migratory habits of Atlantic Coast waterfowl, do not apply this product to lawns in Nassau County, NY between November and May 20. Do not exceed maximum permitted label rates. Rates above those recommended significantly increase potential hazards to birds, especially waterfowl. Avoid overlapping of sprays. On lawns, if waterfowl (ducks or geese) can be expected in the treated area after treatment (except spot treatment), apply at least 1/4 inch of water immediately after spraying this product, however, stop watering before puddling occurs. Keep out of lakes, streams, ponds, tidal marshes, and estuaries. Do not apply directly to water, to areas where surface water is present or to interical areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Shrimp and crat imay be killed at application rates recommended on this label. Do not apply where fish, shrimp, crab and other aquatic life are important resources. Do not contaminate water by cleaning of equipment or disposal of wash waters, This product is highly toxic to bees exposed to direct treatment or residuasion blooming crops or weeds. Do not apply this product or allow it to drift to blocking crops or weeds if bees are visiting the treatment a.e.a." PHYSICAL OR CHEMICAL HAZARDS

Do not use, pour, spill or store near heat or open flame

Manufactured By: Drexel Chemical Company P.O. BOX 13327, MEMPHIS, TN 38113-0327 SINCE 1972

#### **GENERAL INFORMATION**

en la companya de la

DIAZINON is an emulsifiable solution which, when diluted with water according to the directions, is intended for the control of insect pests of agricultural crops and other plants. Do not use on food crops grown in greenhouses. Do not use in barns or dwellings. Do not use on livestock. In directions for use which follow, best control is obtained when application is made at first sign of pests. Application should be repeated only as directed to maintain control. To avoid spray drift, do not apply under windy conditions. Avoid spray overlap, since crop or plant injury may result.

#### **WORK SAFETY RULES**

Repeated exposures to cholinesterase inhibitors such as are contained in this product may, without warning, cause prolonged susceptibility to very small doses of any cholinesterase inhibitor.

When handling this product, do not rub eyes or mouth with hands. If you feel sick in any way, STOP work and get help right away, See "Practical Treatment" section of this label. When handling this product, wear the personal protective equipment listed in the following section.

#### **DIRECTIONS FOR USE**

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulations.

#### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, greenhouses and handlers of agricultural pesticides, it contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), restricted entry interval (REI) and notification to workers. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval.

EXCEPTION: If the product is soil-injected or soil incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated. PPE required for early entry into treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is: Coveralts, chemical-resistant gloves such as barrier laminate, butyl rubber (greater than or equal to 14 mils) in rithle rubber (greater than or equal to 14 mils) or viton (greater than or equal to 14 mils) and shoes plus socks.

# NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Do not permit children or pete to go onto treated areas until spray has dried.

NOTE: The CA Department of Agriculture has set a 5-day re-entry period for this product on Grapes. Peaches, and Nectarines. Five days should etapse between the time of application and the time a worker may enter the field to engage in any activity requiring substantial contact with treated foliage. When a mixture of two or more organophosphate pesticides are applied in combination, the interval should be prolonged by adding to the largest applicable interval an additional 50% of that interval.

#### CHEMIGATION

# APPLICATION THROUGH AN IRRIGATION SYSTEM (CHEMIGATION) (CRANBERRIES ONLY)

This product may be applied alone or in combination with other pesticides registered for application through sprinkler irrigation systems to Cranberries. To insure compatibility, pour the products into a small container of water in the correct proportions. After thorough mixing, let stand for five minutes. If the combination remains mixed, or can be remixed readily, the mixture is compatible. Do not apply this product through any type of irrigation system to other crops. For chemigation, apply this product to Cranberries only through sprinkler irrigation systems. Do not apply this product to Cranberries through any other type of irrigation system. Crop injury, tack of effectiveness or illegal pesticide residues in the crop can result from non-uniform distribution of treated water. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.

Do not connect the irrigation system used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place. A person knowledgeable of the chemigation system and responsible for its operation or under the supervision of the responsible person, shall shut the system down and make necessary adjustments, if the need arises.

# Chemigation System Connected to Public Water Systems

- Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
- 2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the diameter of the fill pipe.

#### Sprinkler Chemigation

and a state of the control of the first problem of the control of

- The system must contain a functional check valve, a vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
- The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
- 3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
- The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
- 6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
- Do not apply when wind speed favors drift beyond the area intended for treatment.

# Operating Instructions

- 1. Determine the acreage to be treated by the sprinkler system.
- Measure the appropriate amount of this product needed to treat the acreage to be treated. Refer to the specific directions for use for Cranberries for the application rate and the amount of water per acre.
- Add the pre-measured this product to the chemigation system supply tank and dilute with water if needed. Proper agitation is needed if this product is tank mixed with other pesticides registered for sprinkler chemigation application to cranberries.
- Start the irrigation system and bring the system up to full pressure, making certain that all sprinkler heads are functioning properly.
- Engage the chemigation injection or venturi system to add the this product to the irrigation lines.
- Continue to run irrigation system for a few minutes after supply tank is empty to allow material in the irrigation lines to reach the sprinkler heads furthest from the chemigation injection poirt.

# FRUIT AND NUT CROPS (REI = 24 hours)

This product may be applied using ground or aerial application equipment as specified in the following table. This table indicates the minimum amount of water that can be used for the various methods of application. The rate of this product for aerial spray or concentrated spray applied to fruit trees by ground equipment is based on a dilute full cover spray applied with conventional ground equipment at a rate of 300 to 400 gallons of water per acre. The specific amount of product to be used appears under the separate directions for use for each crop. If the Rate calls for 1 pint of this product in 100 gallons of water, this amounts to 3 to 4 pints of product per acre when applied at the usual dilute ground spray volumes of 300 to 400 gallons of water per acre. In no case should the amount of product used per acre exceed the maximum amount per acre per application that is specified in the "Timing/Special Directions" for individual crops.

The second secon

# Vegetable Crops (REI = 24 hours)

For foliar or soil applications, this product should always be applied as a spray in sufficient water to assure thorough coverage of the foliage or soil. This product may be applied using ground or aerial application equipment as specified in the following table. This table indicates the minimum amount of water that can be used for the various methods of application. The specific amount of product to be used appears under the separate directions for use for each crop.

|  | Ground<br>Application   |                    |                                     | Aerial<br>Application   |

\*PHI = Pre-Harvest Interval or the number of days to wait between the last application and harvest.

NOTE: 1) SOIL INCORPORATION: Following application of thir product to control vegetable soil insects, immediately incorporate the product into the soil to the recommended depth (see Timing/Special Directions) using a rotary hoe, cultivator, disk, harrow, or other suitable means. For control of Surface cutworms, incorporate 2 to 3 inches, for Subterranean cutworms incorporate 3 to 6 inches. 2) To protect bees: Foliar applications of this product should not be made to Peas or Beans if these crops or weeds in the treatment area are in bloom, or to Corn during the pollen shed period.

| Стор  | Pest  | Rate                       | Timing / Special<br>Directions  |
|---|---|----------------------------|---|
| Beans (lima,<br>role, snap);<br>succulent<br>only | Black bean<br>aphid,<br>Mexican bean<br>beetle,<br>Dipterous<br>leafminer | 1½ pts.<br>per acre        | Apply as insects occur. Repeal application as necessary, even 5 days. Do not make more than 3 applications per season Do not apply within 7 days of harvest or illegal residues may occur. Bean torage or bean hay may be fed to dairy and beef cartle and sheep. Wait 4 days following treatment if forage is to be cut for nay. NOTE: 1) This product will not control organophosphate-resistant Leafminers. 2) To protect bees, do not apply foliarly if the crop or weeds in the treatment area are in bloom. |
|   | Cucumber<br>beetles   | ½ pl.<br>per acre          | Apply as insects occur. Repeat application as necessary, even 5 days. Do not make more than 3 applications per season Do not apply within 7 days of harvest or illegal residues may occur. Bean forage or bean hay may be fed to dairy and beef cattle and sheep. Wait 4 days following treatment if forage is to be cut for hay.   |
|   | Cutworms  | 2 to 4<br>pts. per<br>acre | Broadcast just before planting<br>and immediately incorporate<br>into the soil.<br>(See Soil Incorporation Note.)   |
|   | Wireworms   | 3 to 4<br>qts. per<br>acre | Broadcast just before planting<br>and immediately incorporate in<br>to the top 4 to 8 inches of soil.   |
| Beans (lima);<br>succulent<br>only                | Leafhoppers,<br>Spider miles  | 1 pt.<br>per acre          | Apply as pests occur. Repeat application, as necessary, every 5 days. Do not make more than 3 applications per season. Do not apply within 7 days of harvest or illegal residues may occur. Bean forage or bean hay may be fed to dairy and beef cattle and sheep. Wait 4 days following treatment if forage is to be cut for hay.  NOTE: To protect bees, do not apply foliarty if the crop or weeds in the treatment area are in bloom.   |
| Beets (red<br>table)                              | Cutworms  | 2 to 4<br>qts. per<br>acre | Broadcast just before planting and immediately incorporate into the soil. (See Soil Incorporation Note.)  |
|   | Dipterous<br>leafminers   | 分 to 1 pt.<br>per acre     | Apply as insects occur. Repea application, as necessary, every 7 days. Do not make more than 5 applications per season. Do not apply within 14 days of harvest or illegal residues may occur. NOTE: This product will not control organophosphateresistant Leafminers.  |
|   | Mole cricket  | 1 qt. per<br>acre          | One to two days before plant-<br>ing, broadcast and immediatel<br>incorporate into the top 1 to 2<br>inches of soil,  |
|   | Wireworms   | 3 to 4<br>qts. per<br>acre | Broadcast just before planting<br>and immediately incorporate in<br>to the top 4 to 8 inches of soil  |
| Broccoli (Contloyed)                              | Aphids,<br>Diamondback<br>moth,<br>Imported<br>cabbageworm,<br>Dipterous  | ½ to 1<br>pt, per<br>acre  | Apply as insects occur. Repeat application, as necessary, every 7 days. Do not make more than 5 applications per season. Do not apply within 7 days of harvest or illegal residues may  |
| (Continued)                                       | leafminer   |                            | occur.  |

| Сгор                    | Pest  | Rate   | Timing / Special<br>Directions   |
|-------------------------|---|--|--|
| (Continued)<br>Broccoli | Aphids,<br>Diamondback<br>moth,<br>Imported<br>cabbageworm,<br>Dipterous<br>leatminer | ½ to 1<br>pt. per<br>acre                        | NOTE: This product will not control organophosphate-<br>resistant Leafminers.  |
|                         | Curworns  | 2 to 4<br>cts. per<br>acre                       | Broadcast just before planting and immediately incomplicate into the soil. (See Soil Incorporation Note.)  |
|                         | Mole cricket  | 1 ct.<br>per acre                                | One to two days before plant-<br>ing, broadcast and immediately<br>incorporate into the top 1 to 2<br>inches of soil.  |
|                         | Root magget   | 2 to 3<br>qts. per<br>acre                       | Broedcast just before planting<br>and immediately incorporate<br>into the top 3 to 4 inches of<br>soil.  |
|                         |   | 4 to 8<br>fl. oz.<br>per 50<br>gals. of<br>water | In transplant water as a drench application when 200 to 300 gals. of water are used per acre. Apply ½ to 1 cup (4 to 8 cz.) per plant by hand or by tractor mounted sprayer equipped with drop nozzles to direct spray to the base of the plant. NOTE: Transplant water treatments may result in stand reduction due to plant stress at time of transplanting. |
|                         | Wireworms   | 3 to 4<br>qts. per<br>acre                       | Broadcast just before planting<br>and immediately incorporate in-<br>to the top 4 to 8 inches of soil.   |
| Brussels<br>sprouts     | Aphids,<br>Diamondback<br>moth,<br>Imported<br>cabbageworm,<br>Dipterous<br>leafminer | ½ to 1<br>pt. per<br>acre                        | Apply as insects occur. Repeat application, as necessary, every 7 days. Do not make more than 5 applications per season. Do not apply within 7 days of harvest or illegal residues may occur.  NOTE: This product will not control organophosphate-resistant Leafminers.   |
|                         | Cutworms  | 2 to 4<br>qts. per<br>acre                       | Broadcast just before planting and immediately incorporate into the soil. (See Soil Incorporation Note.)   |
|                         | Mole cricket  | 1 qt. per<br>acre                                | One to two days before plant-<br>ing, broadcast and irrnrediately<br>incorporate into the top 1 to 2<br>inches of soil.  |
|                         | Root maggict  | 2 to 3<br>qts. per<br>acre                       | Broadcast just before planting<br>and immediately incorporate in-<br>to the top 3 to 4 inches of soil.   |
|                         |   | gals. of<br>water                                | In transplant water as a drench application when 200 to 300 gals. of water are used per acre. Apply ½ to 1 cup (4 to 8 oz.) per plant by habd or by tractor-mounted sprayer equipped with drop nozzles to direct spray to the base of the plant. NOTE: Transplant water treatments may result in stand reduction due to plant stress at time of transplanting. |
|                         | Wireworms   | 3 to 4<br>qts. per<br>acre                       | Broadcast just before planting<br>and immediately incorporate<br>into top 4 to 8 inches or soil.   |
| Cabbage                 | Aphids,<br>Diamondback<br>moth,<br>Imported<br>cabbageworm,<br>Dipterous<br>leafminer | ½ to 1<br>pt. per<br>acre                        | Apply as insects occur. Repeat application, as necessary, every 7 days. Do not make more than ( applications per season. Do not apply within 21 days of harvest or flegal residues may occur.  |
| Carrots (Continued)     | Aphids  | 1 pt.<br>per acre                                | Apply as insects occur. Repeat application, as necessary, every 7 days. Do not make more than 5 applications per season. Do not apply within 14 days of harvest or illegal residues may occur.   |

NOTE: This product will not control organophosphateresistant Leafminers.  |
|  | Sutworms  | 2 to 4<br>qts. per<br>acre  | Broadcast just before planting and immediately incorporate into the soil.  (Sea Seri Incorporation Note.)  |
|  | Mate cricket  | 1 qt. per<br>acre           | One to two days before planting, broadcast and incorporate into the top 1 to 2 inches of soil.   |
|  | Wireworms   | 3 to 4<br>qts. per<br>acre  | Broadcast just before clanting and immediately incorporate into the top 4 to 8 inches of soil.   |

| Crop                        | Pest   | Rate                       | Timing / Special<br>Directions   |
|-----------------------------|--|----------------------------|--|
| Onion (bulb<br>and green)   | Onion<br>maggots                                       | 2 to 4<br>qts. per<br>acre | Broadcast just before planting and mix into the top 3 to 4 inches of soil. NOTE: This product will not control organophosphate-resistant Onion maggots.  |
|                             | Onion<br>thrips  | 1 pt. per<br>acre          | Apply as thrips appear. Repeat application as necessary, every 7 days. Do not make more than 3 applications per season. Do not apply within 14 days of harvest, or illegal residues may occur.   |
|                             | Wireworms  | 3 to 4<br>qts. per<br>acre | Broadcast just before planting<br>and immediately incorporate<br>into the top 4 to 8 inches of<br>soil.  |
| Parsley                     | Cutworms   | 2 to 4<br>qts, per<br>acre | Broadcast just before planting and immediately incorporate into the soil.  (See Soil Incorporation Note.)  |
|                             | Wireworms  | 3 to 4<br>qts. per<br>acre | Broadcast just before planting and immediately incorporate into the top 4 to 8 inches of soit.   |
| Parsnip                     | Aphids,<br>Flea<br>Beetles,<br>Dipterous<br>leafminers | ½ to 1<br>pt. per<br>acre  | Apply as insects appear. Repeat application, as necessary, every 7 days. Do not make more than 5 applications per season. Do not apply within 14 days of harvest, or illegal residues may occur. NOTE: This product will not control organophosphateresistant Leafminers.  |
| Peas<br>(succulent<br>only) | Aphids,<br>Dipterous<br>teafminers                     | % to 1<br>pt. per<br>acre  | Apply as insects appear. Repeat application, as necessary, every 5 days. Do not make more than 3 applications per season. To avoid illegal residues, allow a minimum of 7 days between the last application and harvest. Vines and hay may be fed to dairy and beef cattle and sheep. To avoid illegal residues, wait 7 days following treatment if forage is to be cut for hay. NOTE: 1) This product will not control organophosphate-resistant Leafminers. 2) To protect bees, do not apply foliarly if the crop or weeds in the treatment area are in bloom. |
|                             | Cutworms   | 2 to 4<br>qts. per<br>acre | Broadcast just before planting and immediately incorporate into the soil.  (See Soil Incorporation Note.)  |
|                             | Wireworms  | 3 to 4<br>qts. per<br>acre | Broadcast just before planting and immediately incorporate into the top 4 to 8 inches of soil.   |
| Peppers                     | Aphids,<br>Serpentine<br>leafminer                     | ½ to 1<br>pt. per<br>acre  | Apply as insects appnar. Pepeat application, us necessary, every 7 days. Do not make more than 5 applications per season. Do not apply within 5 days of harvest, or illegal residues may occur.  NOTE: This product will not control organophosphale-lesistant Leafminers.   |
| Continued                   | Cutworms   | 2 to 4<br>qts. per<br>acre | Broadcast just before planting and immediately incorporate into the soil. (See Sail Incorporation Note.)   |

| (Continued)<br>Peppers | Mole cricket   | 1 qt. per<br>acre           | One to two days before plant-<br>ing, broadcast and immediately<br>incorporate into the top 1 to 2<br>inches of soil.   |  |  |
|------------------------|--|-----------------------------|---|--|--|
|                        | Wireworms  | 3 to 4<br>qts, per<br>acre  | Broadcast just before planting and immediately incorporate into the top 4 to 8 inches of soil.  |  |  |
| Potatoes               | Aphids,<br>Colorado<br>potato beetle,<br>Dipterous<br>leafminer,<br>Flea beetles | ½ to ½ pt. per acre         | Apply as insects appear, Repeat application, as necessary, every 7 days. Do not make more than 5 applications per season. Do not apply within 35 days of harvest, or illegal residues may occur.  NOTE: This product will not control organophosphate-resistant Leafminers. |  |  |
|                        | Banded<br>cucumber<br>beetles,<br>Leafhoppers,<br>Southern<br>armyworm           | 1/4 to 1<br>pt. per<br>acre | Apply as insects appear. Repeat application, as necessary, every 7 days. Do not make more than 5 applications per season. Do not apply within 35 days of harvest, or illegal residues may occur.  |  |  |
|                        | Cutworms<br>(surface and<br>subterranean)  | 2 to 4<br>qts. per<br>acre  | Broadcast just before planting and immediately incorporate into the soil. (See Soil Incorporation Note.)  |  |  |
|                        | Southern<br>potato<br>wireworm<br>(Southeastern<br>U.S.)                         | 2 to 4<br>qts. per<br>acre  | For Potatoes grown on mineral soils in the Southeast, apply before planting and immediately incorporate into the top 3 to 6 inches of soil depending on location of Wireworms.  |  |  |
|                        | Wireworms  | 3 to 4<br>qts, per<br>acre  | Broadcast just before planting and immediately incorporate into the top 4 to 8 inches of soil.  |  |  |
|                        | NOTE: Do not use on commercially grown Potatoes which will be hand-harvested.    |                             |   |  |  |
| Radishes               | Aphids,<br>Dipterous<br>leafminer.<br>Flea beedes                                | ½ to 1<br>pt. per<br>acre   | Apply as insects appear. ## Field Crops (REL = 24 Hours)

Soil and foliar application of this product should always be applied as a spray in sufficient water to ensure thorough coverage. For foliar application, observe stated time intervals between last application and harvest, as well as intervals between applications and total number of applications that can be made per season.

## Pre-Harvest Interval (PHI\*) For Foliar Applications

|             | NOTE. Sugar beet tops may be fed to beef and dairy      |                             |  |  |  |

#### **GRASSLAND INSECTS**

# Ditch Banks, Roadsides, Wasteland, Non-crop Areas, Barrier Strips

GRASSHOPPERS: Spray ½ to 1 pint per acre in water (minimum of 1 gallon of water per acre) for aerial applications or a minimum of 5 gallons of water per acre for ground applications or in oil (a minimum of 1 gallon of oil per acre) when insects first appear, preferably in the nymphal stage. Thorough coverage of the foliage is essential. Do not graze or use treated grass for forage or feed.

# Insect Control on Ornamentals (REI = 12 Hours)

To control certain insects on Arborvitae, Azalea, Birch, Boxwood, Camellia, Carnation, Chrysanthemum, Douglas fir, Elm, Gladioli, Hawthorn, Holly, Juniper, Lilac, Locust, Maple, Oak, Pine, Ornamental plum, Poplar, Rhododendron, Rose, Spruce and Willow, apply the recommended rates indicated below. Try to spray underside of leaves and penetrate dense foliage. Repeat as necessary.

| Amount Of This Produc( To Use |  |  |
|-------------------------------|--|--|
| Rate Per                      | Rate Per   |  |
| 3 Gals, Water                 | 100 Gals, Water  |  |
| 分fl. cz.*                     | 1 pt",   |  |
| (1 Tbsp.)                     | (16 fl. cz.)   |  |
| 1½ fl. oz*                    | 3 pts.   |  |
| (3 Tbsp.)                     | (48 fl. uz.)   |  |
|                               | This f To Rate Per 3 Gals. Water  ½ fl. cz.* (1 Tbsp.) |  |

PRECAUTION: Do not use on Ferns, Poinsettia, Hibiscus, Papaya, Pilea and Gardenia, since injury to the plants may occur.

\*1 fl. oz. = 2 tablespoons

\*16 fl. oz. = 1 pint

MIMOSA WEBWORMS: Mix ½ fluid ounce in 3 gallons of water (or 1 pint in 100 gallons of water) and apply as a thorough foliar spray when adults first appear. Make a second and third application at 4 to 5 week intervals.

#### Lawn Pest control (Excluding Golf Courses and Sod Farms)

PRECAUTIONS: Birds, especially waterfowl, feeding or drinking on treated areas may be killed. Apply this product only as specified on this label. Because of the migratory habits of certain waterfowl, do not apply in Nassau County, NY between November 1 and May 20. Do not exceed maximum permitted label rates, since rates above those recommended significantly increase potential hazards to birds, especially waterfowl. Avoid overlapping sprays. If waterfowl (ducks or geese) can be expected to enter the treated areas after treatment (except spot treatments), water lawn with at least ½ inch of water immediately after application; however, stop watering before puddling occurs.

|   | Rate / 1,000    | sq. ft. |  |  |
|---|-----------------|---------|--|--|
| Pest  | This<br>Product | Water   | Remarks  |  |
| Ants, Armyworms, Bermudagrass mite, Clover mite, Crickets, Cutworms, Digger wasps, Earwigs, Frit files, Lawn billbug, Leafhoppers, Sod webworm (Lawn moth), Sowbugs (Pillbug), Springtails (Collembola) | 2 to 3 fl. oz.  | 3 gals. | Spot spray Ant hills and Wasp ground nest openings. For Digger wasps, apply at dusk when wasps are not active. For Frit flies, mow grass and water well before treatment, but delay application until grass is dry. For Billbug control, apply when activity is first observed or when chewed or brown grass is present, indicating damage from this insect. |  |
| Brown dog ticks,<br>Chiggers, Fleas   | 3 fl. oz.       | 3 gals. | NOTE: Do not apply to ani-<br>mals. For Brown dog ticks,<br>spray grass and under<br>shrubbery, particularly near<br>house.  |  |
| Hyperodes weevil  | 3 fl. oz.       | 3 gals. | Treat problem areas in mid-<br>April and again in mid-May.   |  |
| Lawn chinch bug   | 2 to 3 fl. oz.  | 3 gals. | Use higher rate for longer residual control and in lawns of dense growth such as St. Augustine lawns.  |  |
| Millipedes  | 3 fl. oz.       | 3 gals. |  |  |
| Rhodesgrass scale   | 3 fl. oz.       | 3 gals. | Apply when Crawlers first emerge.  |  |

#### Nulsance Pests in Outside Areas

Ants, Boxelder bugs, Brown dog ticks, Chiggers, Clover mites, Cockroaches, Crickets, Earwigs, Fleas, Files, Millipedes, Sowbugs (Pillbugs), Spiders, Springtails (Collembola). Mix offuid ounces in 3 gallons of water and thoroughly spray window and door screens, sills, foundations, porch and patio walls, entranceways, walks, garbage cans, tree trunks and into cracks and other places where insects can hide. To prevent entry into houses, spray a five-foot band of soil around the house next to the foundation and spray the foundation of the house to a height of 2 to 3 feet. Repeat application if necessary.

Do not apply to animals. Do not treat plants (other than tree trunks) at this nuisance pest rate.

# STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage and disposal. Open dumping is prohibited.

PESTICIDE DISPOSAL: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal Law. If pesticide, spray mixture or rinsate cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL: Triple rinse (or equivalent). Then puncture and dispose of in a sanitary landfill or incinerate, or burn, if allowed by State and Local authorities. Stay out of smoke from burning container. For minor spills, leaks, etc., follow all precautions indicated on this label and clean up immediately. Take special care to avoid contamination of equipment and facilities during cleanup and disposal of wastes. In the event of a major spill, fire or other emergency, call 1-800-424-9300 day or night.

# **WARRANTY—CONDITION OF SALE**

OUR RECOMMENDATIONS FOR USE of this product are based upon tests believed reliable. Follow directions carefully. Timing and method of application, weather and crop conditions, mixtures with other chemicals not specifically recommended and other influencing factors in the use of this product are beyond the control of the Seller. Buyer assumes all risks of use, storage and handling of this material not in strict accordance with directions given herewith.

In no case shall the Manufacturer or the Seller be liable for consequential, special or indirect damages resulting from the use or handling of this product when such use and/or handling is not in strict accordance with directions given herewith. The foregoing is a condition of sale by the Seller and is accepted as such by the Buyer.
