

#### UNITED STATES ENVIRONMENTAL PROTECTION AGENCY WASHINGTON, D.C. 20460

APR 1 5 2010

OFFICE OF PREVENTION, PESTICIDES AND TOXIC SUBSTANCES

Ms. Luz G. Chan Drexel Chemical Company P.O. Box 13327 Memphis, TN 38113-0327

## Subject: Updated Container Disposal and Warranty Statement

Dear Ms. Chan:

The Agency is in receipt of your Application(s) for Pesticide Notification under Pesticide Registration Notice (PRN) 98-10 and 2007-4 dated April 1, 2010 for:

## EPA Registration 19713-400

**Drexel Acephate 75 WSP** 

The Registration Division (RD) has conducted a review of this request for applicability under PRN 98-10 and 2007-4 and finds that the label change(s) requested falls within the scope of PRN-98-10 and 2007-4. The label has been date-stamped "Notification" and will be placed in our records.

If you have any questions, call me at 703 305-5409 or contact me electronically at daniel.dani@epa.gov.

Sincerely,

Dani Daniel Registration Division (7504P) Insecticide/Rodenticide Branch

## Re: Submission of Revised Label by Notification per PR Notices 2007-4 and 98-10 DREXEL ACEPHATE 75 WSP (EPA Reg. No. 19713-400)

Herewith:

1. Completed EPA Form 8570-1

2. Two copies of the label (marked and clean) (400SP-0310\*) with updated container disposal statements and trademark ownership statement.

The Warranty statement was also updated.

The changes were highlighted for easy reference.

3. Certification Statements

If you have questions/clarification regarding this submission, I can be reached at (901) 774-4370 or e-mail <u>Lchan@drexchem.com</u>.

#### PERSONAL PRO

#### AGRICULTURAL USE RL JUREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard (WPS), 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, greenhouses and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), restricted entry interval (REI) and notification to workers. The requirements in this box only apply to uses of this product that are covered by the WPS. Do not enter or allow worker entry into treated areas during the REI of 24 hours. PPE required for early entry to treated areas that is permitted under the WPS and that involves contact with anything that has been treated, such as plants, soil or water, is: Coveralls, chemical-resistant gloves made of any waterproof material and shoes plus socks.

#### NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when its product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. Do not enter or allow others to enter treated areas until sprays have dried.

#### **GENERAL INFORMATION**

This package contains multiple water soluble packs of ACEPHATE 75 WSP. Do not handle the packets with wet gloves or allow the packets to become wet prior to addition to spray tank. Do not break open packets. Refer to **Tables of Equivalents** to calculate the number of packets to use. If all packets are not used, close and reseal outer container to protect remaining packet(s).

To prepare spray solution, drop the unopened packet of this product into a spray tank containing at least one-half the total quantity of water required. Continue to add water with the agitator running until the spray volume is reached. Depending on the water temperature and degree of agitation in the tank, the packet(s) should completely dissolve in approximately 5 minutes.

Note: Products containing boron and/or fertilizers will prevent the water-soluble packet from dissolving. Boron and/or fertilizer products must only be added after packet(s) have completely dissolved.

#### **IMPORTANT NOTE**

Please pay special attention to the maximum seasonal application rates given for each crop. Repeat applications may not be used in excess of these limits.

#### SPRAY DRIFT MANAGEMENT

A variety of factors including weather conditions, (e.g., wind direction, wind speed, temperature, relative humidity) and method of application (e.g., ground, aerial, airblast, chemigation) can influence pesticide drift. The applicator and grower must evaluate all factors and make appropriate adjustments when applying this product.

- All aerial, ground and air-assisted/airblast application equipment must be properly maintained and calibrated using water as carrier. Do not apply this product as an ultralow volume (ULV) spray, or in any carrier other than water.
- Use the largest droplet size consistent with good pest control. Small droplets
  are more prone to spray drift and can be minimized by appropriate nozzle
  selection, by orienting nozzles away from the air stream as much as possible, and by avoiding excessive spray boom pressure.
- · Do not apply at wind speeds greater than 10 mph at the application site.
- Apply as close to target plants as practical to obtain a good spray pattern for adequate coverage.
- For aerial applications, do not apply at heights greater than 10 feet (consistent with flight safety).
- For airblast applications, direct spray above foliage and turn off outward pointing nozzles at row ends and outer rows.
- For aerial applications, the spray boom should be mounted on the aircraft as to minimize drift caused by wind tip vortices. The minimum boom length should be used and must not exceed 75% of wind span or rotor diameter.
- For ground applications, do not apply at heights greater than 4 feet.

#### CHEMIGATION

This product may only be applied through sprinkler irrigation systems including center pivot, lateral move, end tow, side (wheel) roll, travelers, big gun, solid set or hand move. Do not apply this product through any other type of irrigation system.

Apply to Cranberries only by sprinkler irrigation systems, including central pivot, lateral move, end tow, side (wheel), roll, travelers, big gun, solid, set or hand move. Do not apply this product by chemigation to any other crop, or through any other type of irrigation system.

#### USE RESTRICTIONS

Not for indoor residential use. For greenhouse use, use is limited to commercial greenhouses for use on the listed nursery stock plants and tobacco (floatbed application). Do not apply by low pressure hand wand equipment except for the control of fire ants as mound treatment.

#### TANK MIXES

NOTICE: Tank mixing or use of this product with any other product which is not specifically and expressly authorized by the label shall be the exclusive risk of the user, applicator and/or the application advisor.

Read and follow the entire label of each product to be used in the tank mix with this product.

<sup>1</sup> Lygus -- Use higher rate for Lygus adults that have migrated into Cotton.
<sup>2</sup> Cotton aphids -- This insect has shown the ability to develop resistance to various classes of insecticides in various locations at various times during the production season. Consult your Local Agricultural Extension Service for the current recommended control practices for this insect.

Bollworms and Tobacco budworms – For early season light infestation use 0.66 lb. per acre. For mid-and late-season moderate to severe infestations use the higher rate per acre. Apply when eggs appear and repeat at 7 day spray intervals.

- <sup>4</sup> Adults/Larvae Moths are controlled when they come in direct contact with spray pesticides during application. Moth kill is most likely to occur when application is made late in the evenings during periods of peak activity.
- <sup>5</sup> Eggs When spray pesticides come in direct contact with eggs, hatching larvae may be controlled as they consume and emerge from their egg casing.
- <sup>6</sup> Cutworms Control measures are most effective when ground applications are made in the evenings and the spray is directed toward the lower portion and base of the plant. Apply in water at 10 to 25 gals. of spray per acre by ground. Aerial applications are not as effective in controlling Cutworms. However, should aerial application be necessary, apply in water at 3 to 10 gals. of spray per acre (minimum 5 gals. per acre in CA). Apply when insects first appear or damage is first noted and repeat at 7 day intervals to maintain control.
- <sup>7</sup> Pink bollworms Apply when insects appear and repeat at 7 day spray intervals.

\*Cotton Restriction: Apply no more than 4 lbs. a.i. (5.3 lbs. of this product) per acre per season. This includes all methods of application.

Stinkbugs and Cutworms - Use this product at 1 lb. per acre. Cutworms - Control measures are most effective when ground applications are made in the evenings and the spray is directed toward the lower portion and base of the plant. Apply in water at 10 to 25 gals. of spray per acre by ground. Aerial applications are not as effective in controlling Cutworms. However, should aerial application be necessary apply in water at 3 to 10 gals. of spray per acre (minimum 5 gals. per acre in CA). Apply when insects first appear or damage is first noted and repeat at 7-day intervals to maintain control. All applicable directions, restrictions and precautions on the EPA registered labels are to be followed.

**Cotton Restriction:** Do not apply more than 4 lbs., a.i. (5.3 lbs. of this product per acre per crop cycle. This includes all methods of application. \*\* Use low rate only for light infestations.

\*\* Synthetic pyrethroids should be used within the guidelines of State and or Regional Resistance Management programs and recommendations.

|                                     |                                       | 1.0 21.3  |
|                                     |                                       | Apply 0.66 to 1.33 lbs. of this prod-<br>uct in 3 to 5 gals. of water per acre<br>as an infurrow spray. |

Note: For the Blacklands of TX, use only the 1 lb. rate (21.3 ozs. formulated product per acre.) This product can be mixed with fungicides that are sprayed in-furrow for disease control. Flat-fan nozzles used in-furrow application should be set so that the fanned spray pattern is aligned with the row to in-sure good spray deposition in the seed furrow. Cone type nozzles may not provide a spray pattern that ensures maximum spray deposition in the seed furrow and should be avoided. Spray systems that employ metal or plastic tubing for delivery of spray solution into the seed furrow should have tubing securely fastened to the furrow opener and should be checked frequently to ensure that the tubing is properly positioned to deposit spray solution into the seed furrow.

\* Cotton Restrictions: Apply no more than 1.0 lb. a.i. (1.33 lbs. of this product) per acre per season. This includes all methods of application.

SPRINKLER IRRIGATION APPLICATION TO CRANBERRIES

Crop injury, lack of effectiveness or illegal pesticide residues in the crop may result from non-uniform distribution of treated water.

If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the label-prescribed safety devices for public water suppliers are in place.

A person knowledgeable of the chemigation system and responsible for its operation shall shut the system down and make necessary adjustments should the need arise.

The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

The pesticide injection pipeline must contain a functional, normally closed solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Do not apply when wind speed favors drift beyond the area intended for treatment.

Solid Set System: Apply specified dosage for the entire length of the irrigation period or for a 30 to 60 minute period at the end of a regular irrigation set or as a 30 to 60 minute injection as a separate application not associated with a regular irrigation. Allow time for all lines to flush the pesticide through all nozzles before turning off irrigation water. To ensure the lines are flushed and free of remaining pesticide, a dye indicator may be injected into the lines to mark the end of the application period.

#### See Note.

Center Pivot Systems: Inject the specified dosage per acre continuously for one complete revolution of the system. See Note.

Note: Constant agitation must be maintained in the chemical supply tank during the entire period of insecticide application. Inject the product with a positive displacement pump into the main line ahead of a right turn to insure adequate mixing.

Application of more than label recommended quantities of irrigation water per acre may result in decreased product performance by removing the chemical from the zone of effectiveness.

NON-BEARING CITRUS (including Citrus nursery seedlings)

|   | tee (moldaling onlines hars   |  |
|---|---|--|
| Сгор  | Insects   | Amount of This<br>Product per Acre   |
| Non-bearing citrus<br>(Including Citrus<br>nursery seedlings) | Aphids, Grasshoppers,<br>Katydids, Mealybugs,<br>Orange dogs, Plant<br>bugs, Thrips, Whiteflies   | 0.66 lb.<br>(10.5 ozs.)  |

## STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage and disposal or cleaning of equipment.

**PESTICIDE STORAGE:** Keep pesticide in original container. Do not put concentrate or dilute into food or drink containers. Store in cool, dry place. Protect from excessive heat. Do not contaminate food or feedstuffs. Do not store or transport near feed or food.

For help with any spill, leak, fire or exposure involving this material, call Chemtrec 1-800-424-9300, day or night.

**PESTICIDE DISPOSAL:** Open dumping is prohibited. Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

WATER SOLUBLE PAKS: Carefully open outer bag. Never open the watersoluble bag.

#### CONTAINER DISPOSAL:

Nonrefillable container. Do not reuse or refill this container. Once outer bag of water soluble packet is empty, offer for recycling, if available, or dispose of in the trash as long as water soluble packet is unbroken, or dispose of empty bag in a sanitary landfill or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

#### WARRANTY-CONDITIONS OF SALE

OUR DIRECTIONS FOR USE of this product are based upon tests believed reliable. Follow directions carefully. Timing and method of application, weather and crop conditions, mixtures and other chemicals not specifically recommended and other influencing factors in the use of this product are beyond the control of the Seller. Buyer assumes all risks of use, storage and handling of this material not in strict accordance with directions given herewith.

To the extent consistent with applicable laws, in no case shall the Manufacturer or the Seller be liable for consequential, special or indirect damages resulting from the use or handling of this product when such use and/or handling is not in strict accordance with directions given herewith. To the extent consistent with applicable laws, the foregoing is a condition of sale by the Seller and is accepted as such by the Buyer.
