EPA Registration Number 19713-617

4. Add "Manufactured for: Drexel Chemical Company PO Box 13327 Memphis TN 38113-0327" after the EPA Registration Number and Establishment Number. 2/46

- 5. Place the First Aid Statements in a box.
- 6. Move the statement "For more information on this pesticide product (including health concerns, medical emergencies, or pesticide incidents), call the National Pesticide Information center at 1-800-858-7378" to after the Note To Physician subsection in the FIRST AID section
- 7. Remove "Simazine 4L" from the PSI herbicides listing
- 8. In the PPE section, replace "Dust mist NIOSH-approved respirator with any N, R, P, or HE filter. It is recommended that you require that respirator wearer be fit tested, and trained in the use, maintenance, and limitations of the respirator" with "NIOSH approved particulate filtering respirator equipped with N, R, or P class filter media. The respirator should have a NIOSH approval number prefix TC-84A. It is recommended that you require that respirator wearer be fit tested, and trained in the use, maintenance, and limitations of the respirator wearer be fit tested, and trained in the use, maintenance, and limitations of the respirator" in the subsection Applicators and other handlers (other than mixer mixers and loaders) must wear
- 9. Replace "[40 CFR 170.240 (d)(48)]" with "[40 CFR 170.240 (d)(4-6)]" in the section Engineering Controls
- 10. Place the Agricultural Use Requirements section and the Non-Agricultural Use Requirements section in boxes.
- 11. On page 5 in the Spray Drift Information Section replace "shall" with "must" in the statement "Where states have more stringent regulations, they shall be observed."
- 12. On page 9, revise "Fall paniwm" to "Fall panicum"
- 13. On page 39, move the statement "To minimize drift, do not use nozzles or nozzle configurations which product fine spray droplets (mist)" to the section VEGETABLES-Tomatoes from the section VEGETABLES (California, Washington, Oregon, Idaho only) Lettuce, Melon, Sugar Beets Tomatoes.
- 14. On page 44, add "to the extent consistent with applicable law" before "buyer assumes the risk of any such use"
- 15. This registration will be subject to cancellation in accordance with FIFRA section 6(e) if the source of this product is cancelled.

The basic formulation CSF [dated 10/27/2008] of the product referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act are acceptable. The basic CSF will be added to your file.

You will submit one (1) copy of your final printed labeling before you release the product for shipment. If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA section 6(e). A stamped copy of labeling is enclosed for your records. If you have any questions, please contact Hope Johnson at 703-305-5410.

James Fompleins Product Manager (25)

Herbicide Branch Registration Division (7505P)

RESTRICTED USE PESTICIDE

Due to acute toxicity. For retail sale to and use only by certified applicators or persons under their direct supervision and only for those uses covered by the certified applicator's certification.

QUIK-QUAT

ACCEPTED with COMMENTS in EPA Letter Dated

FEB 17 2009

Under the Federal Insecticide, Fungicide, and Rodenticide Act as amended, for the pesticide registered under EPA Reg. No.

6

Defoliant and desiccant herbicide for the control of weeds and grasses and as a harvest aid.

NEVER PUT INTO FOOD, DRINK OR OTHER CONTAINERS. IF SWALLOWED, TAKE IMMEDIATE ACTION AS PRESCRIBED IN FIRST AID. SYMPTOMS ARE PROLONGED AND PAINFUL. DO NOT USE OR STORE IN OR AROUND THE HOME. DO NOT REMOVE CONTENTS EXCEPT FOR IMMEDIATE USE. THE ODOR OF THIS PRODUCT IS FROM THE STENCHING AGENT WHICH HAS BEEN ADDED, NOT FROM PARAQUAT.

ACTIVE INGREDIENT:

Paraquat dichloride (1,1'-dimethyl-44'-bipyridinium dichloride)	43.2%
OTHER INGREDIENTS:	
TOTAL:	00.0%

This product contains the toxic ingredient methanol at 7%. Contains 3.0 pounds paraquat cation per gallon as 4.14 pounds of dichloride salt per gallon. Contains emetic and stenching (odor) agent.

KEEP OUT OF REACH OF CHILDREN

DANGER PELIGRO POISON VENENO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a ustec en détalle. (If vou do not understand the label, find someone to explain it to you in detail.)

EPA Reg. No. 19713 -EPA Est. No. 19713 -

6.4

Net Contend

FIRST AID

Contains paraquat, a bipyridinium herbicide. Have the product container or label with you when calling a poison control center or doctor, or going for treatment. For more information on this pesticide product (including health concerns, medical emergencies, or pesticide incidents), call the National Pesticide Information Center at 1-800-858-7378.

If swallowed:

- Call a poison control center or doctor IMMEDIATELY for treatment advice. SPEED IS ESSENTIAL. Immediate medical attention is required. If available, give an absorbent such as activated charcoal, bentonite or Fuller's Earth.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to by a poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

If inhaled:

- Move person to fresh air. The odor of this product is from the stenching agent, which has been added, not from the paraquat.
- If person is not breathing, call 911 or an ambulance.
- Call a poison control center or doctor for treatment advice.

If in eyes:

- Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

If on skin or clothing:

- Take off contaminated clothing. Rinse skin immediately with plenty of water for 15 to 20 minutes.
- Call a poison control center or doctor for treatment advice.

NOTE TO PHYSICIAN Administer either activated charcoal (100 grams for adults or 2 g/kg body weight in children) or Fuller's Earth (15% solution; 1 liter for adults or 15mL/kg body weight in children). NOTE: The use of gastric lavage without administration of an absorbent has not shown any clinical benefit. Do not use supplemental oxygen. Eye splashes from concentrated material should be treated by an eye specialist after initial treatment. With the possibility of late onset corneal ulceration, it is advised that patients with paraquat eye injuries are reviewed by an eye specialist the day after first presentation. Use treatment that is appropriate for chemical burns. Intact skin is an effective barrier to paraquat; however, contact with irritated or cut skin or repeated contact with intact skin may result in poisoning.

IMPORTANT: Inhalation is an unlikely route of exposure due to low vapor pressure and large spray droplet size, but mucosal imitation or nose bleeds may occur. Prolonged contact with this concentrated product can irritate your skin.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers (other than mixers and loaders) must wear:

Long-sleeved shirt and long pants; Chemical resistant gloves - Category A (e.g., barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC) or viton); Shoes plus socks; Protective eyewear; A dust mist NIOSH approved respirator with any N, R, P, or HE filter. The respirator wearer must be fit tested and trained in the use, maintenance, and limitations of the respirator.

Mixers and loaders must wear:

Long-sleeved shirt and long pants; Chemical resistant gloves - Category A (e.g., barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC) or viton); Shoes plus socks; Chemical resistant apron; Face shield; Dust mist NIOSH-approved respirator with NIOSH approved particulate filtering respirator equipped with N, R, P, or class filter media. The respirator should have a NIOSH approval number prefix TC-84-A. The respirator wearer must be fit tested and trained in the use, maintenance, and limitations of the respirator.

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(48)], the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS

Users should: 1) Wash hands before eating, drinking, and chewing gum, using tobacco or using the toilet. 2) Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing. 3) Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This product is toxic to wildlife. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment wash waters.

Paraquat dichloride is toxic to nontarget crops and plants if off-target movement occurs because it desiccates all green plant tissue. Extreme care must be taken to ensure that off-target drift is minimized to the greatest extent possible. Refer to the local state laws, regulations, guidelines, and spray drift information contained in the *Directions For Use* section of this label for proper application to avoid off-target movement. Do not apply under conditions involving possible drift to food, forage, or other plantings that might be damaged or the crops thereof rendered unfit for sale, use, or consumption. Do not apply when weather conditions favor drift from treated areas. To avoid drift, do not make aerial application during periods of thermal inversion.

PHYSICAL AND CHEMICAL HAZARDS

This product is mildly corrosive to aluminum and produces hydrogen gas which may form a highly combustible gas mixture. Do not mix or store in containers, spray tanks, nurse tanks, or such systems made of aluminum or having aluminum fittings. The product is compatible with high density polyethylene and rubber-lined steel containers.

DIRECTIONS FOR USE

RESTRICTED USE PESTICIDE.

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

Do not use around home gardens, schools, recreational parks, golf courses or playgrounds.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard (WPS) 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval (REI). The requirements in this box only apply to use of this product that are covered by the WPS.

For preplant or preemergence (broadcast or banded), chemical fallow, postemergence directed spray applications, early postemergence broadcast in peanuts and dormant season applications, and "between cutting" applications in alfalfa: Do not enter or allow worker entry into treated areas during the REI of 12 hours.

For harvest aid and desiccation application: Do not enter or allow worker entry into treated areas during the REI of 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is: Coveralls, shoes plus socks, protective eyewear, chemical resistant gloves - Category A (e.g., barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC) or viton).

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the ' Worker Protection Standard (WPS) for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

DO NOT enter or allow others to enter the treated area until sprays have dried. AVOID working in spray mist.

Keep all unprotected persons out of operating areas or vicinity where there may be danger of drift.

Certain states may require more restrictive reentry intervals; consult your State Department or Agriculture for further information.

GENERAL INSTRUCTIONS AND INFORMATION

Do not apply this product through any type of irrigation system.

When this product is applied at less than I0 gallons per acre finished spray volume, a drift control or spray deposition additive should be used. Refer to the additive label for rates of applications, directions for use, limitations, and restrictions.

SPRAY DRIFT INFORMATION

AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR. The interaction of many equipment- and weather-related factors determines the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.

The following DRIFT MANAGEMENT REQUIREMENTS must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses or to applications using dry formulations.

- 1. The distance of the outer most nozzles on the boom must not exceed 3/4 the length of the wingspan or rotor.
- 2. Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45 degrees.

Where states have more stringent regulations, they shall be observed. The applicator should be familiar with and take into account the information covered in the Aerial Drift Reduction Advisory Information.

AERIAL DRIFT REDUCTION ADVISORY INFORMATION Information on Droplet Size

The most effective way to reduce drift potential is to apply large droplets. The best management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environment conditions (see Wind, Temperature and Humidity, and Temperature Inversions).

Controlling Droplet Size

Volume - Use high flow rate nozzles to apply the highest spray volume. Nozzles with higher rated flows produce larger droplets.

Pressure - Do not exceed the nozzle manufacturer's recommended pressures. For many nozzle types lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.

Number of Nozzles - Use the minimum number of nozzles that provide uniform coverage. **Nozzle Orientation** - Orienting nozzles so that the spray is released parallel to the

airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential. **Nozzle Type** - Use a nozzle that is designed for the intended application. With most

nozzle types, narrower spray angles produce larger droplets. Consider using low-drift(nozzles. Solid stream noules oriented straight back produce the largest droplets and the lowest drift.

For some use patterns, reducing the effective boom length to less than 3/4 of the wingspan or rotor length may further reduce drift without reducing swath width.

Application Height

Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making application at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

Swath Adjustment

When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase with increasing drift potential (higher wind, smaller drops, etc.). **Wind**

wina

Drift potential is lowest between wind speeds of 2 to10 mph. However, many factors, including droplet size and equipment type, determine drift potential at any given speed. Application should be avoided below 2 mph due to variable wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

Temperature and Humidity

When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

Temperature Inversions

Applications should not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

Sensitive Areas

The pesticide should only be applied when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitat for threatened or endangered species, nontarget crops) is minimal (e.g., when wind is blowing away from the sensitive areas).

GENERAL INFORMATION

This product is a liquid formulation containing 3 lbs. of active ingredient per gallon. It contains a nontoxic odor to help prevent accidental ingestions. It also contains an emetic (an agent which will induce vomiting if the product is swallowed).

APPLICATION

This product is a contact herbicide for control or suppression of a broadspectrum of emerged weeds including most small annual broadleaf and grass weeds. It can also be used to suppress perennial weeds by destroying green foliage and as a desiccant/ defoliant at harvest. Complete coverage of target weeds is necessary to get good control because this product is a contact-type herbicide. It is also necessary to obtain complete coverage for good crop desiccation and defoliations. Undesirable weed control and undesirable crop desiccation/defoliation will result if improper application technique and/or application to large, stressed, or mown weeds are made.

Thorough coverage of all green foliage is required for efficacious weed control and work the defoliation and desiccation because this product requires actively growing the second secon

There is no residual soil activity to affect later-planted crops or later germinating weeds because clay and organic matter rapidly tie up this product.

ROTATIONAL CROPS

After the last application of this product, all rotational crops may be planted immediately.

RAINFASTNESS

Rain occurring 30 minutes or more after application will have no effect on the activity of this product because it is rapidly absorbed by the weed foliage.

USE OF A NONIONIC SURFACTANT OR CROP OIL CONCENTRATE CLEARED FOR THE CURRENT USE

The following should always be added and be used at the recommended rates or there will be a reduction in efficacy of this product.

Nonionic Surfactant:

Either add a nonionic surfactant containing 50 to 74% surface-action agent at 0.25% v/v (2 pts. per100 gals.), or add nonionic surfactant containing 75% or more surface-active agent at 0.125% v/v (1 pt. per100 gals.); of the finished spray volume for ground applications. Add a nonionic surfactant at 0.25% v/v (2 pts. per 100 gals.) of the finished spray volume for agent at 0.25% v/v (2 pts. per 100 gals.) of the finished spray volume for ground applications.

Crop Oil Concentrate: For ground applications, add a nonphytotoxic crop oil concentrate that contains 5 to 20% approved emulsifier, with 1.0% v/v (1 gal. per 100 gals.) of the finished spray volume. Add 1 pt. of crop oil concentrate per acre for aerial applications. For cotton harvest aid, do not use crop oil concentrate when using this product.

NOZZLE SELECTION

The use of flat-fan nozzles is the most effective application of this product. The use of flood nozzles may result in a reduction of weed control due to inadequate coverage because they produce large uneven droplets.

Use only flat fan nozzles when spraying less than 20 gallons of spray carrier per acreusing the following table.

Recommended Nozzle Type and Spray Pressures and Setup

	Nozzle Type			
	Flat Fan	Flood		
Maximum Size	8	15		
Spray Pressure (at nozzie)	30-50 psi	30-50 psi		
Maximum Nozzle Spacing	30"	40°		
Direction of Spray Pattern	Down	Down		
Maximum Speed	10 mph	10 mph		
Spray Overlap (at each edge)	30%	50%		

Reduced control will result if nozzles, pressures, or setups differ from the above chart.

SPRAY CARRIER

This product may be inactivated by muddy water, or suspension-type fertilizers containing clay. Therefore, always use clean water (free of mud or clay), clear liquid nitrogen, or complete clear, included fertilizers as the carrier when spraying this product. Never use suspension-type fertilizers containing clay as the spray carrier. Always use the higher rate of this product and surfactant if using a complete clear liquid fertilizer containing high phosphate levels as the spray carrier. Note: It is important that when using liquid fertilizers such as 28% N as a spray carrier, that nonionic surfactant still be used with this product. The use of liquid fertilizer carriers are not substitutes for surfactants.

RATES OF THIS PRODUCT

With each use, follow rates listed in the following tables. When weeds are larger or are dense, use the higher label rates. For use as a harvest aid, use higher rate when crop vegetation is dense. Do not exceed 0.50 lbs. a.i. per acre in a minimum of 30 gallons of spray for broadcast applications with backpack sprayers.

SPRAY VOLUME

With each use, follow rates listed in the following tables. Spray volumes should be increased as necessary to obtain complete coverage of the target weed or plant without runoff from the foliage, because the volumes listed are minimum volumes only.

TARGET WEEDS SHOULD NOT EXCEED SIX INCHES IN HEIGHT WHEN SPRAYING LESS THAN 20 GALLONS OF SPRAY CARRIER PER ACRE.

APPLICATION TIMING

Applications should be made to small emerged weeds. Larger weeds more than 6 inches in height may be more difficult to control than weeds 1 to 6 inches in height. If possible, when green foliage is removed either from grazing or mowing, allow the weeds to grow 2 to 4 inches in height. Also, during harvesting forage or grain crops before spraying, weeds present in the field are also cut. Therefore, raise cutter bars as high as possible from the ground to cut stubble and weeds at a greater height, allowing sufficient green foliage to remain for applications.

BURNDOWN OF GRASS COVER CROPS OR VOLUNTEER CEREALS

The best results occur for control of grass cover crops or volunteer cereals when this product is applied prior to tillering or after boot stage, especially with a wheat cover crop or volunteer wheat. Complete control may not be achieved with treatments made between tillering and boot stage. Complete control of perennial cover crops should not be expected.

ENVIRONMENTAL CONDITIONS

This product is active over a wide range of environmental conditions such as cool (below 55°F), cloudy or overcast weather. However these conditions will slow the activity of this product.

SPOT SPRAYING

Refer to the following table if only small areas are to be sprayed with labeled applications.

Mixing Instructions for Small Quantities for Spot Spraying

If the Broadcast Rate Per Acre for THIS PRODUCT is:		Add The Following Amount of THIS PRODUCT to 1 Gallon of Water				
1 ½ pts.		1/3 fl. oz.				
2 pts.		3/8 fl. oz.		· · · · · ·		
2 ½ pts.	. ·	1/2 fl oz.	ι, τ. τ. τ. ι. ι.,	· · · · · · · · · · · · · · · · · · ·		
3 pts.	~	2/3 fl. oz.				

Add 1/3 to 1/2 fl, oz. of a nonionic surfactant for each gallon of spray at all times: Thoroughly wet the foliage, but not to the point of runoff when spot spraying in this manner.

TANK MIXING: ENHANCED BURNDOWN OF DIFFICULT-TO-CONTROL WEEDS AND FOR RESIDUAL WEED CONTROL

Photosynthetic Inhibitor Herbicides

To control difficult weeds, tank mix this product with other herbicides. The addition of other photosynthetic inhibitors (PSI) herbicides will slow the activity of this product. This allows this product to thoroughly distribute throughout a treated leaf, thus achieving better control than if thisproduct was applied alone.

THIS PRODUCT may be applied in tank mixture with the following PSI herbicides:

AAtrex® Herbicide Atrazine 4L Herbicide Bicep Lite II MAGNUM® Herbicide Bicep MAGNUM® Herbicide Canopy® Herbicide Lariat®Herbicide Lexone®Herbicide Linex® Herbicide Lorox® Herbicide Princep® Herbicide Simazine 4L Sencor® Herbicide

Always refer to the respective product label(s) for rates of applications, directions for use, limitations, and restrictions.

Improved Weed Control with PSI's

The addition of a PSI herbicide will help improve the control of difficult weeds listed below. Make a second application for best results.

Barnyardgrass Broadleaf signalgrass Cheatgrass Cocklebur Fall paniwm Giant ragweed Knotweed Kochia Lambsquarters Malva (cheeseweed) Marestail Morningglory Pennsylvania smartweed Perennial weeds (suppression only) Prickly lettuce Sedges Tansymustard Velvetleaf Volunteer wheat

Improved Control of Perennial and Annual Broadleaf Weeds

Tank mixing with labeled 2,4-D ester (Low Volatile), 2,4-DB or Banvel® herbicide will help improve control when perennial broadleaf weeds such as Canada thistle, bindweed, dandelion, etc., or difficult to control annual broadleaf weeds such as giant ragweed or morningglory are present. Reduced grass control may be achieved when tank mixing the amine formulation of 2,4-D with this product.

Order of Tank Mixing

It is advisable to tank mix this product and other listed products as follows:

- 1. Fill spray tank 1/2 full with clean water or other approved carriers such as clear liquid fertilizer.
- 2. Begin tank agitation and continue throughout mixing and spraying.
- 3. Add dry formulations (WP, DF, etc.) to tank.
- 4. Add liquid formulations (SC, EC, L, etc.) to tank.
- 5. Add THIS PRODUCT to tank.
- 6. Add nonionic surfactant to tank.
- 7. Fill remainder of spray tank.

Always read other pesticide products labels for weeds controlled, rates of applications, directions for use, limitations, and restrictions.

It is advisable to perform a jar test to check physical compatibility when using different formulation of the herbicides listed on this label.

GENERAL PRECAUTIONS AND RESTRICTIONS

EQUIPMENT

THIS PRODUCT is **corrosive to aluminum**. Thoroughly flush all aluminum spray equipment and aluminum aircraft structures that are exposed to spray solution or spray drift with water immediately after use.

The activity of THIS PRODUCT may be reduced in dry areas where dust stirred up by high winds or equipment tires can coat weed or plant leaves. Therefore, avoid applications in extremely dusty conditions.

LIMITATIONS AND PRECAUTIONS

- Unless otherwise indicated, THIS PRODUCT will severely injure or kill crop plants emerged at time of application if they come in contact with sprays.
- Do not pasture livestock in treated fields or feed treated foliage in cotton when this
 product is used as a cotton harvest aid.
- Do not use around home gardens, schools, recreational parks, or playgrounds.
- Do not apply to soils lacking clay minerals such as peat, muck, pure sand, artificial planting media for preplant and preemergence (to the crop) uses.
- To enable maximum weed and grass emergence prior to treatment, seedbeds and plantbeds should be formed as far ahead of planting and treatment as possible.
- Avoid disturbing soil when seeding or transplanting.
- Transplanted plants may become damage when they come in contact with plastic mutch a used for preplant weed control and that has been treated with this product. To prevent the damage to the crop, sufficient wash-off such as rainfall or sprinkler irrigation prior to the complanting may be needed.
- THIS PRODUCT will be ineffective in controlling or suppressing weeds and grasses that have emerged after application.

APPLICATION INSTRUCTIONS

-14

.....

1

Сгор	Weeds	Use Pattern	THIS PRODUCT Rate Per Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)	Additional Precautions, Restrictions and Directions
ALFALFA (California only) New seedlings	•	Broadcast	0.7-1.3 pts. See Tablé 2.	Ground: 10 gals. Air: 5 gals.	70	 Do not make more than one application per year. Applications should be made during late winter or early spring. Do not cut or harvest within 70 days after application. Alfalfa foliage present at time of application will be burned. Replanting may be needed due to the reduction of seedling stands. Do not apply to seedling alfalfa grown for seed.
ALFALFA Preplant or Preemergence (No-till or conventional planting)		Broadcast or Banded Over Row	1.7-2.7 pts.	Ground: 10 gais, Air: 5 gais.		 Do not make more than 2 applications per year. Apply prior to emergence of the crop. Avoid disturbing soil when seeding. Crop plants emerged at time of application will be killed.
ALFALFA Dormant season Established plantings Region A - See table at end of Alfalfa section	Weeds, including bluegrass, chickweed, henbit, downy brome, ryegrass, cheatgrass, dogfennel, tansymustard, London rocket, sowthistle, rescue brome, wild oats, and other winter annuals; and suppression of pereinnial weeds.	Broadcast	1.3-2.0 pts.	Ground: 10 gals. Air: 5 gals.	42	 Do not make more than one application per year. Fall regrowth: Do not apply if last fall cutting is greater than 6." Spring regrowth: Do not apply if last cutting is greater than 2". After the crop is domant, apply to well-established stands that are at least 1-year old. Yield of first cutting may be reduced because alfalfa foliage present at the time of application will be burned. Do not cut or harvest within 42 days after application. For improved and longer-lasting weed control, tank mix with metribuzin (Lexone or Sencor). Always refer to the metribuzin label for weeds controlled, rates of applications, directions for use, timitations, and restrictions.

CACAO	Directed Spray	1.3-2.7 pts.	Ground: 50- 200 gais.	1	 Do not make more than 5 applications per year. Apply when weeds are succulent and growth is from 1-6". Retreatment or spot treatments may be necessary for mature woody weeds, late-germinating weeds and grasses and for perennials. Use a shield for young trees to prevent sprays from contacting cacao plants, as injury may result. Do not spray under windy conditions. Do not graze treated areas or feed treated cover crops to livestock.
CASSAVAS, TANIERS & YAMS (Puerto Rico only)	Shielded Post Directed Spray	1.3 pts.	Ground: 50 gals.	90	 Cassavas and Taniers: Do not make more than 3 applications per year. Yams: Do not make more than 2 applications per year. Make applications when weeds are succulent and growth is 1-6". Prevent spray from contacting crop to prevent injury to crop. Do not spray under windy conditions. Do not graze treated areas or feed treated forage to livestock.

General Information for Chemical Fallow

As the density of stubble, crop residue or weeds increases, use higher spray volumes for better coverage. To control volunteer wheat or downy brome, fail-applied treatments generally work best with THIS PRODUCT. If possible, tank mix with atrazine for maximum burndown and residual control.

Apply from immediately after harvest up to emergence of the newly seeded crop as a broadcast or band
treatment.

• Before applying THIS PRODUCT, cut wheat as high as possible to avoid cutting weeds too short, and allow the weeds to grow at least 2-3" after harvest.

• The addition of dicamba (Banvel) or 2,4-D ester (Low Volatile) may aid in the suppression of emerged perennial broadleaf weeds and large annual broadleaf weeds. Always refer to the product label(s) for 2,4-D ester (Low Volatile), Banvel, or residual herbicide for rates of applications, directions for use, limitations, and restrictions.

It is permissible to tank mix with registered residual herbicide combinations other than listed for extended weed control during the fallow period

Weeds and grasses emerging after application and weeds tailer than 6 inches will not be controlled.

Crop plants emerged at the time of application will be killed.

The minimum total spray per acre allowed is 5 gallons for ground and 5 gallons for air applications.

- Apply 5-60 gallons spray mix per acre by ground application.
 - When applying at less than 10 GPA by ground:
 - Do not apply with floaters or exceed a speed of 10 mph.
 - . Apply with flat fan nozzles at 30-40 psi.

Apply only in a tank mix with atrazine at a minimum of 0.5 lb. a.i./acre.

By air: apply in 5-10 gallons of spray mix per acre.

FIELD CORN, POPCORN, SWEET CORN, SEED CORN	Postemergence Directed Spray (including Hooded or Shielded)	0.7-1.3 pts.	Ground: 10 gals.	_	 Do not make more than 3 applications per year. Applications should be made when weeds are actively growing. Use a higher rate on larger or hard to control weeds. Weeds 8" or taller may not be controlled. Severe damage and/or complete kill can occur if spray contacts com plants For Hooded Or Shielded Sprayers: Use a hooded or shielded sprayer
					with skids or wheels on the spray boom to maintain spray height in order to prevent excessive crop phytotoxicity. • Apply by directing spray between the rows and using hooded or shielded sprayers to prevent spray contact with crop plants. For Directed Spray Without Hooded Or Shielded Sprayers: Corn height is measure from soil
		•			 surface to top of whorl. Apply when com is at least 10" tail with nozzles arranged to spray no higher than the lower 3" of corn stalks. Corn plants shorter than 10" may be injured and not recover. For com more than 20" tall: Arrange the nozzles to spray no higher than the lower 1/3 of the corn stalks. Injury to corn foliage will occur if sprayed. However, corn will recover and develop normally.

Сгор	Use Pattern	THIS PRODUCT Rate Per Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)	Additional Precautions, Restrictions and Directions
FIELD CORN, POPCORN, SEED CORN	Harvest Aid Broadcast	0.8-1.3 pts.	Ground: 20 gale. Air: 5 gals.	7	 Do not make more than one application per year. Make ONE (1) application at least 7 days prior to harvest. Apply after the corn is mature. This is indicated by a black layer which forms at the base of the kernels. You may consult your local agricultural authority for help in identifying the black layer. Add nonionic surfactant containing at least 75% surface active ingredient at 0.25% v/v. To deslocate instruct the broadleaf weeds and grasses that are tailer than 18", use 1.3 pts. Drought stressed plants, especially broadleaf weeds, can be cifficult to kill, and desicoation may not be complete.

• When tank mixing with Cotoran DFe or Meturon DFe, follow mixing instructions carefully, maintain constant agitation, and see Order of Tank Mixing section in respective labels.

 When tank mixing with any of the herbicides listed above, always refer to respective product label(s) for weeds controlled, rates of applications, directions for use, limitations, and restrictions.

COTTON Harvest Aid Use Restrictions

Do not make more than 4 applications per year.

. Do not pasture livestock in treated fields or feed treated foliage.

Do not apply to cotton within 3 days before harvest.

Repeat application if necessary. Do not exceed a total of 1.3 pts./A as a harvest aid.

May be tank mixed with other cotton harvest aid materials known to be effective by a local expert. Unless otherwise instructed in this label, always refer to the respective product label(s) for rates of applications, directions for use, limitations, and restrictions. THIS PRODUCT can be applied in a tank mix with methyl parathion and/or Karate[®] insecticide. Always refer to the respective product label(s) for rates of applications, directions for use, limitations, and restrictions.

Nodes above cracked bolls (NACB) timing is for guidance and is not intended to restrict the local expert in their use of the product.

• •					• If necessary, make a second and final application 7-14 days later. HOODED OR SHIELDED SPRAYERS
-			А. С.	•	Apply by directing spray between the rows and using hooded or shielded sprayers to prevent spray contact with crop plants.
•		· ·			• Use higher rate on larger (less than 6") or hard to control weeds. Weeds 6" or taller main not be controlled.
· .					Severe damage and/or complete kill can occur if spray intentionally or accidentally (including drift of fine droplets) contacts the
			· .		plants. DIRECTED SPRAY WITHOUT HOODED C SHIELDED SPRAYERS
					• Do not freat on soybeans that are less that tall.
	\$				• Use precision directed apray application equipment eduised so that no niore than the lower 3" of the scybean plant is contacted b
					the application spray. ¿ ‹ ` ` ` • Do not exceed 30 psi nozzle pressure or spray under conditions which may cause
•					excessive drift. • Some crop injury will occur. The degree of injury is dependent upon the precision of

I · · ·			· · ·		application and spraying conditions.
SOYBEANS	Harvest Ald	5.4-10.7 fl. oz.	Ground: 20 gais. Air; 5 gais.	-	• Do not make more than 3 applications per year. • Indeterminant varieties: Applications should be made when at least 65% of the seed pods have reached a mature brown color or when seed moisture is 30% or less. Determinant varieties: Apply when plants are mature, i.e., beans are fully developed, 1/2 of leaves have dropped, and remaining leaves are yellowing. • Injury will occur on immature soybeans.
					 Mature cocklebur, especially drought- stressed plants, are tolerant to THIS PRODUCT and desiccation will not be complete. Always use the higher rate when treating cocklebur. Do not apply within 15 days of harvest. Do not graze or harvest for forage or hay.
STRAWBERRIES	Postemergence Directed Spray	1.3 pts.	Ground: 20 gais.	21	 Do not make more than 3 applications per year. Direct spray between the rows, using shields to prevent spray contact with crop plants. Do not allow spray to contact strawberry plants as injury or excessive residues may result. Do not apply more than 3 times per season. Do not graze livestock in treated areas.
SUGAR BEETS	Preplant or Presmergence	1.3-2.7 pts.	Ground: 10.gals. Air: 5 gals.	-	 Do not make more than 3 applications per year. For heavier weed infestations, use the higher label rate. Seeding or transplanting should be done with a minimum amount of soil disturbance. Crop plants emerged at time of application will be killed. Can be used in fallow bed/stale seedbed for weed control. Seedbeds or plantbeds should be formed as far ahead of treatment as possible to permit maximum weed emergence.

÷.,

Сгор	Use Pattern	THIS PRODUCT Rate Per Acre	Minimum Total Spray Per Acre	Grazing or Preharvest Interval (Days)	Additional Precautions, Restrictions and Directions
SUGARCANE	Postemergence Directed Spray (includes Hooded or Shielded)				General Comments • Do not make more than 2 applications per year, except applications made by air in Florida and Texas in which the maximum number of applications allowed is 1 per year. • Apply as a hooded, shield addred in the text spray to atteid contact with care foliage to prevent leaf burk and yield reduction. • If necessary, a second and final application can be mode when new weed growth is 2-6" high.
—Florida—		1.3 pts.	Ground: 50 gals,		Do not make more than 2 applications per year. Optimum results can be obtained by applying in early spring (March-April) when weeds are small.

				whitsfly, burn tomato vines with propane burners as soon as possible. after the vines have dried down sufficiently. • DO NOT apply more than a total of 3 ibs. active ingredient (paraquat) per acre per season.
VEGETABLES (California, Washington, Oregon, Idaho oniy) Lettuce Melon Sugar Beets Tomatoes	Broadcast	0.4-0.7 pts.	Ground: 10 gais. Air: 5 gais.	 To minimize drift, do not use nozzles or nozzle configurations which produce fine spray droplets (mist). Do not make more than 2 applications per year. For control of volunteer barley in preformed seedbeds. Do not harvest tomatoes within 30 days after application.
VEGETABLES Rhubarb	Dormant	1.7-2.7 pts.	Ground: 10 gals.	 Do not exceed 2 applications per year. Apply during dormant season before buds in crown begin to grow.

RESIN SOAKING

Pines including Loblolly, Shortleaf, Longleaf, Slash, Virginia, Pond, Pitch, and Spruce Pines.

Tree Selection -Trees should be selected from stands on sites not subject to stress from periodsof extreme drought stress because the desiccating effect ofTHIS PRODUCTisaccentuated during drought, causing a reduction in the amount of oleoresin deposited in thexylem. Vigorous, non-stagnated natural or planted stands should be selected. PlanTHISPRODUCTtreatments in stagnated or commercial timber stands, not sooner than threeyears after a commercial thinning.

Application Directions To bring the treatment into contact with sapwood (or xylem), apply water-diluted THIS PRODUCT to an appropriate wound in the tree trunk.

Bark Streaks or Cuts: Use a standard or rotary bark hack or a chainsaw shipping tool (used in naval stores work) to remove a single 1-inch wide streak of bark about 1-2 ft. from ground level. Do not exceed 1/3 of the circumference of the tree. Serious girdling of the trunk and premature death of the tree can result if multiple streaks or cuts are made. Apply a coarse spray (about 1.7-5.0 ml) THIS PRODUCT solution (1-5% cation, wt./wt. basis) to runoff to the exposed xylem, using a low-pressure sprayer. The amount of spray required per cut depends on tree circumference and the length of cut or streak. For example, for a 9-inch diameter tree, using 3 ml of 2 or 4% THIS PRODUCT solution will cover the 1-inch wide streak and will result in application of 60 or 120 mg per streak.

Time of Treatment: Less severe pine beetle infestation and longer tree life usually result during cool season treatments under non-drought seasons. However, resin soaking can occur from treatments made any time of the year.

Interval between Treatment and Tree Harvest: There should be at least a 6-month interval between application of THIS PRODUCT and tree harvest. However it is preferable the interval is from 12-24 months, even though intervals of over 6 months may not be possible under conditions of drought or serious pine beetle attacks possibly making early.

With this treatment, there is a potential for promoting beetle attack or causing premature death of the tree. At high dosage rates, desiccation of the xylem tissue, rather than the desired resing the second secon

soaking, may occur.

Note: This type of treatment may reduce stem growth during between treatment and tree harvest.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

Pesticide Storage: Store in original container and place in a locked storage area. Do not mix or store in containers, spray tanks, nurse tanks, or such systems made of aluminum or having aluminum fittings. Store at temperatures above 32°F. For Emergencies involving a Spill, Leak, Fire, Exposure, or Accident, contact: CHEMTREC at (800) 424-9300.

Pesticide Disposal: Pesticide wastes are acutely hazardous. Improper disposal of excess, spray mixture, or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency; or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Disposal:

Do not reuse container as container is not safe for food, feed or drinking water!

Plastic containers: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

Minibulk Containers: Reseal container and offer for reconditioning, or triple rinse (or equivalent) and offer for recycling or reconditioning, or clean in accordance with manufacturer's instructions.

Minibulk Refillable Containers: Before refilling, inspect thoroughly for damage such as cracks, punctures, bulges, dents, abrasions and damaged or worn threads on closure devices. After filling and before transporting, check for leaks. Do not refill or transport damaged or leaking containers
