

CONCENTRATED POOL CHLORINE

The control of pool water is greatly simplified using **HYPO CONCENTRATED POOL CHLORINE**. In fact, you will require from 1/2 to 1 1/2 times the amount of acid usually applied. **HYPO CONCENTRATED POOL CHLORINE** provides a more stable form of chlorine for easier maintenance of an effective chlorine residual in pool water for disinfecting action. It requires less storage space and maintains constant strength regardless of storage time. It is economical to use in that, after the pool is stabilized you will need to apply **HYPO CONCENTRATED POOL CHLORINE** less often.

INSTRUCTIONS

When starting up a new pool, superchlorinate to satisfy chlorine demand and to establish a chlorine residual of 1.0 ppm to 1.5 ppm available chlorine. To accomplish this, add 2 oz. **HYPO CONCENTRATED POOL CHLORINE** per 1,000 gallons of pool water. The next morning, add **HYPO CYANURIC ACID** at the rate of 4 oz. per 1,000 gallons to stabilize the pool.

HYPO CONCENTRATED POOL CHLORINE should be added daily or as needed at the rate of 1/2 to 1 oz. per 1,000 gallons of pool water to maintain a chlorine residual at all times of 1.0 ppm to 1.5 ppm as determined by a suitable test kit. The pH should be maintained between 7.2 and 7.6.

A shock treatment should be made every week during hot weather or during cool weather. For the shock treatment, add 2 oz. of **HYPO CONCENTRATED POOL CHLORINE** per 1,000 gallons of pool water. Swimmers should not be permitted in the pool after the shock treatment until the chlorine residual has reached the 1.0 ppm to 1.5 ppm range.

Keep in mind that a slight flexibility must be maintained in the event of heavy accumulations of dust and dirt caused by storms or super heavy bathing loads which require additional dosages as needed to maintain the chlorine residual between 1.0 ppm and 1.5 ppm.

- Features a dry chlorine that dissolves immediately.
- A most effective germicide and algicide.
- Will not cause cloudiness in water.
- Will not add scale forming minerals in the water.
- Will maintain your pool crystal clear.
- Flame-resistant.

ACTIVE INGREDIENT

Sodium Dichloro-Triazinetrione Dihydrate, 100%

DANGER

KEEP OUT OF REACH OF CHILDREN

Rinse empty container thoroughly with water and discard it. See first aid statement and other required statements on the side panels.

CONCENTRATED POOL CHLORINE

DANGER

KEEP OUT OF REACH OF CHILDREN

Corrosive. Causes eye damage. Do not get in eyes or on skin. Do not breathe dust. May cause skin, nose and throat irritation. Wear safety goggles, dust mask, apron and protective clothing when handling. May be fatal if swallowed. May cause burns to broken skin.

Strong oxidizing agent. Moisture contamination may liberate irritating and hazardous chlorine-containing gases. Decomposes at 350° - 475° F. with liberation of harmful gases. In case of decomposition, if possible isolate container in open air or well ventilated area. Flood with large volume of water if necessary.

FIRST AID

In case of personal contact, remove excess material and flush skin with cold water for at least 15 minutes. For eyes get medical attention. Clean contaminated clothing before reuse.

If swallowed, feed grain or cooked cereal, followed by olive oil or cooking oil. Call a Physician immediately.

Mix only with water. Do not mix with other pool chemicals. Use only dry, clean measuring utensils. Store in a cool, dry place. Keep closed when not being used. Do not reuse container. Rinse empty container thoroughly with water and discard.

This product is toxic to fish. Treated pool effluent water should not be discharged where it will drain into lakes, streams, ponds or public water. Do not contaminate water by cleaning of equipment or disposal of wastes.

Apply this product only as specified on this label.
