Blue Shield P.D.Q. Tabs provide effective control of bacteria and algae growth in pool water. DO NOT add this product directly to pool water or to continuous tablet chlorinating devices. P.D.Q. Tabs are intended for addition to the pool skimmer or into a floating dispenser. Do not mix this product with any other chemical.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

START-UP: When starting up a reopened or freshly filled swimming pool, make sure that the filtration system is clean and operating properly. Then adjust and maintain the pH in the range of 7.2 to 7.6. Use Blue Shield pH Increase or pH Decrease as indicated by a reliable test kit. Then superchlorinate with one of Blue Shield's fast acting chlorinating products, following label directions, to establish a free chlorine residual of 1.0 to 1.5 ppm (parts per million). If your pool has not been stabilized previously, add Blue Shield Conditioner and Stabilizer (cyanuric acid) until 30 ppm is obtained following label directions.

DAILY: Add P.D.Q. Tabs to pool skimmer with filter running. Keep filter running until P.D.Q. tabs completely dissolve. Maintain a 1.0 to 1.5 ppm chlorine residual. A suggested dosage is one P.D.Q. Tab per 5,000 gallons of water daily. This dosage may vary due to unusual conditions such as heavy bather loads, wind, heavy rain and high temperatures. Therefore, frequent use of a test kit is recommended as a guide to maintain the pH at 7.2 to 7.6 and the chlorine residual at 1.0 to 1.5 ppm.

The re-entry into treated swimming pools is prohibited above levels of 3 (or 2) ppm chlorine residual.
