

Chloropicrin 100 is used for fumigation of warehouses, vaults, empty or full, flat and upright grain storage buildings.

Chloropicrin 100 can be used for grain and space fumigation but is not approved for use when processed food or feed is present.

It controls insects like rice weevil, granary weevil, confused flour beetle, cadelle, lesser grain borer, sawtoothed grain beetle, flour moths, and grain moths. It also controls some mold causing fungi.

Chloropicrin 100 is used for soil fumigation in greenhouses, nurseries, and outside seed beds to control damping off with root rots, soil insects, nematodes, and weed seeds. Chloropicrin 100 when used as a grain treatment is exempt from tolerance under the Moller Act. No dangerous residues will be left after aeration of grain or soil.

When exposed to Chloropicrin 100 vapors, use full face gas mask with canister designed for grain and grain vapor.

Do not treat活的植物或种子。Always aerate thoroughly after exposure period. Do not direct spray toward open flame.

Chloropicrin 100 kills many land plants. Be sure to avoid plant bulbs from any exposure. Do not fumigate sick material or fresh fruits, fresh vegetables, fresh meat, yeast, bread, butter or cheese. Chloropicrin 100 may cause discoloration of meat. Avoid contact with skin and eyes.

**CAUTION** This product contains chloropicrin which is a highly toxic fumigant. It is extremely dangerous if inhaled. Do not breathe vapors. Do not eat or drink while using this product. Do not use near children or pets.

# CHLOROPICRIN 100 SOWECO BRAND

## SPACE, GRAIN, and SOIL FUMIGANT

Effectiveness against:  
fungi, insects, nematodes and weeds in soil.

USDA Registration Number EPA No. 21327.1

### SPACE FUMIGATION IN EMPTY MILLS, WAREHOUSES EMPTY STORAGE BUILDINGS, VAULTS

Remove any processed food or feed such as flour, cracked feed or processed food products.

Seal all openings as carefully as possible using tape and polyethylene sheets or other convenient means. Distribute empty burlap sacks on the floor and sprinkle Chloropicrin over them.

Use gas mask.

#### Dosage in

Warehouses, empty bins, 1 lb./1000 cubic feet.

Vaults with sacked grain, 1 lb./1000 cubic feet.

Exposure Period 12-24 hours. Aerate thoroughly until all令人舒适的 vapors are removed.

**GRAIN TREATMENT** Treat when turning grain or loading new bins. Apply Chloropicrin 100 in the grain stream as close as possible to top of bin using one shot for each 1 foot or less of grain depth. Determine interval between shots from the rate of grain flow.

#### Dosages for clean, dry grain

Wheat, barley, rye, oats, 1 lb./1000 lbs.

Oats, 1 lb./1000 lbs.

Corn, 3 lbs./1000 lbs.

Sorghum, milo, 4 lbs./1000 lbs.

Seal treated bin. Exposure period at least 12 hours.

Avoid fumigation if grain moisture is high or grain temperature is below 60° F. or if there is excessive dockage.

#### Aerate Thoroughly Before Unloading Bins

**SOIL FUMIGATION** All types of equipment from hand rakes to tractor drawn machines are used for the application of Chloropicrin 100 depending upon the size of the area treated.

Effectiveness of treatment increases in warm soils. Treat at temperatures above 60° F. for best kill. If weed seeds are present, moist for at least four days prior to fumigation.

**Dosage** Normal dosage is 3 cc per injection on 10" center in light soil, 8-9" center for heavy soils. Inject 4-6" deep or at 1/2 inch depth. Use deeper injections in light soil at higher temperatures. As result of this, experimental stations have no recommendation.

For future soil treatments, use a larger dose than recommended on soil texture. Take care not to damage roots by injecting into water seal. For best results, do not use a tilled soil.

**Exposure Period** 4-48 hours for planted crops; 48-72 hours for weeds.

**Aeration** When applying fumigants to the soil, effective aeration is essential. After fumigation, allow the treated soil to stand for 24 hours before reworking it to reduce fumigant concentration.

**NON WARRANTY** No express or implied warranties are made. The manufacturer or distributor shall not be liable for any damages resulting from the use of this product. The user must determine whether this product is suitable for his particular use.
