APPLICATIONS

Algae Knockout is used to control the growth of algae in swimming pools. For maximum effectiveness, pools containing heavy growth of algae should be cleaned prior to using Algae Knockout.

For pools having just visible algae growth add an initial dose of 75 to 115 fl. oz. of Algae Knockout per 10,000 gal. of water and remove settled algae debris by cleaning.

For treatment of a freshly cleaned and filled pool, add initially 41 to 75 fl. oz. of Algae Knockout per 10,000 gal. of water.

To maintain pools free of visible algae growth, subsequent additions of 13.5 to 27 fl. oz. of Algae Knockout per 10,000 gal. of water should be made every 5 to 7 days after the initial treatment.

Uniform distribution of Algae Knockout throughout the water in the pool is necessary for maximum effectiveness.

Algae Knockout is compatible with those chemicals normally used to treat pools and is effective at both acid and alkaline pH. Algae Knockout can be used in pools treated with chlorine chemicals and may reduce the amount of those chemicals normally required. However, do not mix Algae Knockout with concentrated dry or liquid chlorine products.
