BMC ALGAECIDE No. 20

Use Directions

BMC ALGAECIDE NO. 20 is used to inhibit the growth of algae, bacteria, and fungi in recirculating commercial and industrial cooling water systems. Before treatment with BMC ALGAECIDE NO. 20, systems must be cleaned to remove algal growth, microbiological slime, and other deposits. Then the system should be treated with an initial slug addition of 6.9 to 13.9 fluid ounces of BMC ALGAECIDE NO. 20 per 1,000 gallons of water in the system. Repeat the initial dosage until control is evident. Subsequent slug additions of 2.3 to 13.9 fluid ounces of BMC ALGAECIDE NO. 20 per 1,000 gallons of water should be made every 1 to 5 days or as needed. The required frequency of treatment depends on the relative amount of bleedoff and the severity of the microbiological problem. Slug additions of BMC ALGAECIDE NO. 20 should be made to the sump of water cooling towers.

BONCO BMC ALGAECIDE NO. 20

Active Ingredients..... 8.75%
 Disodium cyanodithioimidocarbonate ... 3.18%
 Ethylenediamine 1.20%
 Potassium N-methyldithiocarbamate.... 4.37%
 Inert Ingredients 91.25%

Weight per gallon 8.70 lb.
 Weight of active ingredients per gallon 0.76 lb.

EPA REGISTRATION NO. 26884-6

WARNING

KEEP OUT OF REACH OF CHILDREN

Causes eye damage and skin irritation. Do not get in eyes, on skin, or on clothing. Wear goggles or face shield and rubber gloves when handling. Harmful or fatal if swallowed. Avoid contamination of food. See right panel for first aid and additional precautionary statements
