ADVERSE REACTION INFORMATION

Sensitivities may occur after using ANY pesticide product for pets. If signs of sensitivity occur, consult a veterinarian immediately or call local Animal Poison Control.

DIAGNOSIS FOR EAR MITES: Ear mites usually induce the formation of a dry, dark brown, waxy exudate with crusts in the ears of dogs, cats and rabbits. Ear mites may be detected by placing some of the ear exudate on a dark surface and carefully watching for the movement of tiny white specks away from the exudate. Inflamed, watery, or blocked ear canals indicate a more serious condition which requires the services of a veterinarian.
