

ACCEPTED

This algicide is formulated to supplement swimming pool water being treated with normal chlorine systems. It is especially effective against growth of algae and biological volatile acids in maintaining pool water clarity and sparkle. The residual effectiveness of this algicide tends to stabilize the total chemical treatment system. This algicide is compatible with all chemicals normally used in swimming pool maintenance; however, in its concentrated form this chemical should not come into contact with high concentrations of chlorine. DO NOT MIX THIS ALGICIDE AND CHLORINE TOGETHER when adding to the pool. These chemicals should be handled separately.

This algicide is economical, efficient, stable.

DIRECTIONS

For general application use one gallon of this product per 10,000 gallons of water. Use one quart per 50,000 gallons of water for control of severe algae, depending on weather and sun exposure of the pool before application.

After each rain of consequence, add one quart per 10,000 gallons of water. Even though the pool may not be in use for periods of time, algae growth should be controlled. Algae may be removed by a good stream of water. The addition of algaecide to the water will remove the algae. It should be adequately diluted prior to application. A bottle of 4 fluid oz. contains 160 cubic feet of swimming pool water. Assure rapid dispersion.

Active Ingredients:

Acy-Cide 58 Cy-28 Cy-14
2-methyl-benzyl ammonium chloride

Inert Ingredients:

90

**DANGER:
KEEP OUT OF REACH OF CHILDREN
