

APPLICATIONS

ALGAECIDE PQ CONCENTRATE is used to control the growth of algae in swimming pools. For maximum effectiveness, pools containing heavy growth of algae should be cleaned prior to using *ALGAECIDE PQ CONCENTRATE*.

For pools having just visible algae growth add an initial dose of 24 to 37 fl. oz. of *ALGAECIDE PQ CONCENTRATE* per 10,000 gal. of water and remove settled algae debris by cleaning.

For treatment of a freshly cleaned and filled pool, add initially 13 to 24 fl. oz. of *ALGAECIDE PQ CONCENTRATE* per 10,000 gal. of water.

To maintain pools free of visible algae growth, subsequent additions of 4 to 8 fl. oz. of *ALGAECIDE PQ CONCENTRATE* per 10,000 gal. of water should be made every 5 to 7 days after the initial treatment.

Uniform distribution of *ALGAECIDE PQ CONCENTRATE* throughout the water in the pool is necessary to insure maximum effectiveness.

ALGAECIDE PQ CONCENTRATE is compatible with those chemicals normally used to treat pools and is effective at both acid and alkaline pH. *ALGAECIDE PQ CONCENTRATE* can be used in pools treated with chlorine chemicals and may reduce the amount of those chemicals normally required. However, do not mix *ALGAECIDE PQ CONCENTRATE* with concentrated dry or liquid chlorine products.
