A highly effective insecticide formulation specially made for use in automatic mist dispensing units around restaurants, stores, dairies, motels, hospitals, food processing establishments, and other areas where flies, gnats, and mosquitoes are an annoyance.

Active Ingredients:	
Pyrethrins	1.00%
Piperonyl Butoxide, Technical*	10.00%
Petroleum Distillates	5.00%
Inert Ingredient:	80.00%
Total	100.00%

\* Equivalent to 8.0% (butylcarbityl) (6-propylpiperonyl) ether and 2.0% related compounds.

This battery operated unit is one of the first electronically operated, automatic dispensing devices which utilized portability and flexibility to provide the consumer with the effect of killing flies, mosquitoes, and gnats indoors.

**DIRECTIONS:**

Remove bottom canister then remove cover from aerosol and insert container firmly into timer valve. Place the canister back in unit.

This product is designed to be used with an automatic dispenser. One unit should be installed for each 6000 cubic feet of space to be treated. The dispenser activates the 100 mg. metered valve of the aerosol once each 15 minutes and after 2 hours of operation enough insecticide is suspended in the air to reduce the number of flies present and kill a proportion of the flies, mosquitoes, and gnats in the area.

**CAUTION:** Keep out of reach of children.  
See other precautions on the side panel

EP, Vol. 10, 1-1-71

Usually the effectiveness of the aerosol will be noticeable within one hour after activation, and if less than 24 hours control is required, the dispenser should be set to start one hour before control is required and run one hour after control is established.

Conditions such as air change rate, shape of space treated, humidity and temperature affect insect activity and control, therefore, one unit per 6000 cubic feet may be considered as the average. As with any method of insect control, improved performance is achieved when good sanitary practices are used. The 12 ounce can contains approximately 2000 shots and, therefore, will operate for a total of 725 hours or about one month on a 24 hour basis or about 2 months on a 12 hour basis. Change container accordingly.

**CAUTION:** Do not use in nurseries or rooms where infants, ill or aged persons are confined. Remove or cover food in food processing or storage areas prior to use of spray. The use of this product in barns would not be considered acceptable since these structures are normally open and drafty. Use in food processing establishments only when plant is not in operation. Foods should be removed or covered during treatment. All food processing surfaces should be covered during treatment or thoroughly cleaned before using. Ventilate areas before reoccupying.

**WARNING:** Contents under pressure. Do not puncture. Do not use or store near heat or open flame. Exposure to temperatures above 130 degrees Fahrenheit may cause bursting. Never throw container into fire or incinerator.

**WARNING:** Use only as directed; intentional misuse by deliberately concentrating and inhaling the contents can be harmful or fatal and contains fluorocarbons.
