KEEP OUT OF REACH OF CHILDREN CAUTION

See back panel for additional precautionary statements and statement of practical treatment.

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Harmful if swallowed, inhaled, or absorbed through the skin. Avoid breathing dust. Avoid contact with skin, eyes or clothing. Wash thoroughly after handling and before eating or smoking.

STATEMENT OF PRACTICAL TREATMENT

<u>EWALLOWED:</u> Call a physician or Poison Control Center immediately. Induce vomiting by giving victim 1 or 2 glasses of water and touching back of throat with finger. Do not induce vomiting or give anything by mouth to an unconscious or convulsing person.

IF IN EYES: Flush eyes with plenty of water. Get medical attention. IF ON SKIN: Remove contaminated clothing. Wash affected area with soap and water.

ENVIRONMENTAL HAZARDS: This product is toxic to fish. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not apply when weather conditions favor run-off or drift from treated areas. Do not contaminate water by cleaning of equipment or disposal of wastes.

DIRECTIONS FOR USE: It is a violation of Federal law to use this product in a manner inconsistent with its label.

Not for use on turf being grown for sale or other commercial use as sod, or for commercial seed production, or for research purposes.

This product contains a pre-emergence herbicide plus a complete lawn food which should be applied directly to established turf for the control of Smooth and Hairy Crabgrass, Goosegrass (Silver Crabgrass or Clawfoot), Annual Bluegrass (Poa annua), Barnyardgrass (Watergrass), and Green and Yellow Foxtail.

WHEN, WHERE AND HOW TO USE: Apply this product to the turf prior to the germination of the seeds of weedy grasses since established weeds already present will not be controlled. Do not make

a spring application to Bermuda lawns that have been overseeded with winter grasses since thinning mayl occur. Do not use on Dichondra, nor to newly sprigged areas of Bermudagrass, St. Augustinegrass, or Centipedegrass. Do not use on bentgrass putting greens. Use only on well established turfgrasses since injury may occur to young tender growth. This product may thin Annual Bluegrass or fine-leafed Fescue lawns when used at higher rates than 50 lb/12,500 sq. ft. Do not overdose. Follow directions carefully.

The above chart gives suggested timing for application since the successful pre-emergence control of the annual grass weeds listed on this label requires proper timing of application. Apply approximately 1 to 2 weeks ahead of the germination of the annual grass weeds. Any cultural practices that disturb the soil such as aerification or verticutting, should be done prior to this application. Optimum weed control performance will be obtained if the treated areas are irrigated soon after application.

NORTHERN (COOL SEASON) TURFGRASS: For control of Crabgrass, Foxtail, and Barnyardgrass apply the contents of this bag to cover 12,500 sq. ft. For control of Annual Bluegrass (Poa annua), apply 50 pounds to cover 10,000 sq. ft of troublesome areas.

SOUTHERN (WARM SEASON) TURFGRASS: For control of Crabgrass, Foxtail, and Barnyardgrass apply the contents of this bag to cover 10,000 sq. ft. For weed seeds that germinate over an extended period of time a second treatment may be made in 8 to 10 weeks. For control of Annual Bluegrass (Poa annua), apply 50 pounds to cover 6750 sq. ft. When seed germination continues for an extended period of time a second application can be made at the same rate 10 to 12 weeks after the initial treatment.

RESEEDING THE AREA: Reseeding of any desirable turf grass seed should be delayed for at least 6 weeks after using this product at the rate of 50 pounds/10,000 - 12,500 sq. ft. Best results will be obtained when the amount of seed per 1000 sq. ft. is increased 25%.
