## H-2 ALGAECIDE

A Treatment for use in recirculating Commercial and/or Industrial Water Cooling Systems to control the growth of Algae.

ACTIVE INGREDIENTS:

Poly[oxyethylene(dimethyliminio)ethylene(dimethyliminio)ethylene dichloride]

10.0

INERT INGREDIENTS:

90.0

100.0%

NET CONTENTS:

55 Gals.

EPA REG. NO.:

33355-1

**CAUTION:**

Avoid contact with skin and eyes. Harmful if swallowed. Avoid contamination of food.

**KEEP OUT OF REACH OF CHILDREN**

FIRST AID:

In case of contact, flush with plenty of water for at least 15 minutes. If eye irritation persists, get medical attention.

DIRECTIONS FOR USE:

H-2 Algaecide is used to control algae, bacteria, and fungi in recirculating commercial and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algae growth, microbiological slime, and other deposits.

INITIAL DOSE:

An initial slug addition of 6.13 to 15.32 fluid ounces of H-2 Algaecide per 1000 gallons of water to provide a concentration of 48 to 120 parts per million of H-2 Algaecide based on the total weight of water in the system is recommended. Repeat initial dosage until control is evident.

SUBSEQUENT DOSE:

Subsequent slug additions of 1.53 to 15.32 fluid ounces of H-2 Algaecide per 1000 gallons of water (12 to 120 parts per million of H-2 Algaecide) should be employed every 2 to 5 days or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the microbiological problem. Slug additions should be made to the sump of water cooling towers.

NOTICE:

This product is toxic to fish. Treated effluent should not be discharged where it will come in contact with public water. Do not contaminate water by cleaning of equipment or disposal of waste. Do not use in drinking water. Do not reuse empty cans. Return to dealer for refilling and do not use for purposes other than those intended. Keep away from water supply.
