PRECAUTIONARY STATEMENTS
Hazards To Humans & Domestic Animals
DANGER Irritant. Causes eye damage. May be fatal if swallowed. Do not get in eyes. Wash thoroughly with water. Avoid breathing dust. May cause dizziness or headache. Use protective clothing, gloves, and eye protection. Wash thoroughly after handling.
PRACTICAL TREATMENT - FIRST AID If swallowed, give 1-2 glasses of water. If eye contact, flush with water for 15 minutes. If inhaled, move to fresh air. If symptoms persist, seek medical attention.
CHEMICAL HAZARDS May be fatal if swallowed. Causes eye irritation. May cause dizziness or headache. Use protective clothing, gloves, and eye protection. Wash thoroughly after handling.
ENVIRONMENTAL HAZARDS May be fatal to fish and aquatic life. Do not apply to water bodies. Do not apply to areas where water is used for drinking. Do not apply to areas where water is used for irrigation. Do not apply to areas where water is used for livestock. Do not apply to areas where water is used for domestic animals. Do not apply to areas where water is used for domestic animals.

SPECIAL PRECAUTIONS
 Do not apply to water bodies. Do not apply to areas where water is used for drinking. Do not apply to areas where water is used for irrigation. Do not apply to areas where water is used for livestock. Do not apply to areas where water is used for domestic animals. Do not apply to areas where water is used for domestic animals.

 AND OTHER PRECAUTIONS ON THE PANE

ACTIVE INGREDIENT
 Trichloro-s-triazinetrione 24.4%

INERT INGREDIENTS
 Available in 100 lb. bags

NET WEIGHT 35 lbs

DIRECTIONS FOR USE

1. See directions on Federal law to use this product in a manner consistent with its labeling.
2. Adjust water pH to 7.2 to 7.6 as determined by a test kit. If you use a chlorine test kit, use a test kit that also tests for pH.
3. If the pool has not been properly stabilized, add 1 lb. of stabilizer and stabilizer per gallon of water. Follow the directions for use on the label for that product.
4. To determine the area of pool that is agitated by the circulation system, place a float in the pool. The float should be placed further from the circulation area which works with the circulation system of the pool.
5. Newly filled pools: For every 10,000 gallons of water, add 1 tablet per 100 gallons of pool water to stabilize chlorine residue. Repeat dosages as determined by a test kit. Repeat dosages as needed to maintain a chlorine residual of 1.0 to 1.2 ppm at all times. Thereafter, add 1 tablet per 10,000 gallons per week or as needed to maintain a chlorine residual of 1.0 to 1.2 ppm at all times as determined by a test kit. If you use a stabilizer, follow steps 1 through 4. Add 1 tablet per 10,000 gallons per week or as needed to maintain a chlorine residual of 1.0 to 1.2 ppm at all times as determined by a test kit. Please note: The pH of the pool is a self-stabilizing tablet. Do not use the acid to lower pH and will tend to reduce the pH and alkalinity of the pool water. Proper pH should be maintained at pH 7.2 to 7.6 as determined by a test kit. In case of additional chlorine, use potassium or sodium dichlorinate.

STORAGE & DISPOSAL

Store in a cool, dry, shaded place. Do not store in a place where children can reach. Do not use if the container is damaged. Do not use if the tablets are broken. Do not use if the tablets are wet. Do not use if the tablets are moldy. Do not use if the tablets are discolored. Do not use if the tablets are otherwise damaged. Do not use if the tablets are otherwise damaged.
