STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE

Myacide GA 25 solutions are corrosive to many commonly used materials of construction such as steel, galvanised iron, aluminium, tin and zinc. These solutions can be stored and handled in baked phenolic lined steel, stainless steel or reinforced epoxy equipment. This product freezes at approximately -20°C (-4°F). Therefore, unless the storage tank is inside or underground, heating and insulation may be required. If heating is needed, exposure to high temperatures should be avoided. For short storage (1 month) temperatures up to 100°F can be tolerated; however, the preferred maximum storage temperature is approximately 80°F. Keep away from fire and open flames. A stainless steel centrifugal pump is suggested for transfer service.

PESTICIDE DISPOSAL

Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environment Control Agency, or the Hazardous Waste Representative at the nearest EPA regional office for guidance.

CONTAINER DISPOSAL

Triple rinse (or equivalent) then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by State and local authorities.

GENERAL

Consult Federal, State and local authorities for approved alternative procedures RCRA Hazardous Waste Code D002.

DIRECTIONS FOR USE IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN <u>A MANNER INCONSISTENT WITH ITS LABELLING</u> AIR WASHERS AND RECIRCULATING COOLING WATER SYSTEMS: This product may be used only in industrial air washer systems which have mist-eliminating compounds. Myacide GA 25 should be added at the application rates described below, to a water treatment system at a convenient point of uniform mixing such as the basin area. Addition may be made intermittently (SLUG DOSE) or continuously. Badly fouled systems can be shock treated with Myacide GA 25. Under these conditions, blowdown should be discounted for up to 24 hours. INTERMITTENT (SLUG DOSE) METHOD: Initial Dose: When the system is noticeably fouled, add 23.0-46.0 fluid ounces (200-400 ppm) of Myacide GA 25 per 1,000 gallons of water in the system. Repeat until control is achieved.	OIL WELL DRILLING AND OIL FIELD PROCESS APPLICATIONS OIL WELL WATER FLOODS Calculate the total volume of water flood system and, using this volume, calculate the number of gallons of Myacide GA 25 needed. Use 200-400 ppm Myacide GA 25 until control is achieved. For example, 0.18-0.36 gal Myacide GA 25 per 1000 gal floodwater will provide this dilution. Add Myacide GA 25 as a slug or intermittently. 100 ppm of Myacide GA 25 added each week is recommended to maintain bacterial control. This may be accomplished by adding 0.1 gal of Myacide GA 25 to each 1,000 gals of total volume. DRILLING MUDS Calculate the total volume of the drilling mud system and using this volume, calculate the number of gallons of Myacide GA 25 needed. Parts per million (ppm) levels are for total product. Use up to 2000 ppm Myacide GA 25, depending on the severity of the bacterial contamination. For example, 7.6 gal.
