

Label Copy No: IS-1-6X5

Product: S-1 Stop Drop

Size: 1 gallon

Date: 1/5/67

Field No: Can

-2-

When spraying with STOP-DROP under high temperature, do not over-lap and avoid over-spraying of the lower canopy.

Label Copy No: IS-1-6X5

To reduce pre-harvest sprouting of apples to a minimum subject to temperature dropping use 1 pint of STOP-DROP in 100 gallons of water.

In spraying years, use 1 pint of STOP-DROP in 100 gallons of water.

STOP-DROP should be sprayed on apples and pears a week to ten days before picking and no closer than five days. Do not make more than two applications. Do not spray pears or Winesap apples more than once.

CAUTION--Harmful if swallowed. Avoid contact with eyes, skin and clothing. If spilled on skin, wash with soap and water. If splashed in eyes, flush eyes with clear water for 15 minutes. If injury appears serious, consult a physician.

(Back Panel)

STOP-DROP IS A FUNGICIDE AND  
RODENTICIDE WHICH IS EFFECTIVE  
AGAINST THE FOLLOWING PESTS OF APPLES  
AND PEARS:  
SCAB, BROWN ROT, BROWN CANCER, AND  
OTHER FUNGUS DISEASES OF APPLES AND  
PEARS.

PREPARATION

Directions: For use on apples and pears, dilute STOP-DROP as a spray from 100 to 1000 gallons of water. Apply during the normal period at the following dilutions:

Dilution	Per gallon	Parts per million
For scab control	1 pint	20
For brown rot control	1 quart	10
For brown cancer control	1/2 pint	7.5
For general control	1 quart	10
