**DIRECTIONS FOR USE:** It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

## RECIRCULATING COOLING WATER SYSTEMS

This product aids in the control of bacterial, fungal and algal slimes in evaporative condensers, heat exchange water systems, cooling and retort systems, commercial and industrial cooling towers, influent systems such as flow through filters and lagoons and industrial water scrubbing systems. This product may be added to the systems either continuously or intermittently or as needed to the tower basin, distribution box or some other point to insure uniform mixing. The frequency of feeding and duration of the treatment will depend upon the severity of the contamination. Control the application by measuring the free chlorine residual in the treated water. There is no need to exceed 1 ppm as free chlorine. Determine chlorine residual using a commercially available test kit. **BADLY FOULED SYSTEMS** must be cleaned before treatment is begun.

## FOR THE CONTROL OF BACTERIA, FUNGI AND ALGAE

**INTERMITTENT OR SLUG METHOD - INITIAL DOSE:** When the system is noticeably fouled, add this product at the rate of 0.1 to 1.5 pounds (12 to 180 ppm) per 1000 gallons of water in the system. Repeat until control is achieved. **SUBSEQUENT DOSE:** When microbial control is evident, add this product at the rate of 0.05 to 1.0 pound (6 to 120 ppm) per 1000 gallons in the system daily, every 3 days or as needed to maintain control.

**CONTINUOUS FEED METHOD - INITIAL DOSE:** When the system is noticeably fouled, add this product at the rate of 0.1 to 1.5 pounds (12 to 180 ppm) per 1000 gallons of water in the system. Continue until control is achieved. **SUBSEQUENT DOSE:** When microbial control is evident, continuously feed this product to maintain a dosage of 0.05 to 1.0 pound (6 to 120 ppm) per 1000 gallons of blowdown (or water loss) from the system.
