**DIRECTIONS FOR USE
 GENERAL CLASSIFICATION**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

SUPER CONCENTRATE ALGAECIDE is used to control algae, bacteria, and fungi in recirculating commercial and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algal growth, microbiological slime, and other deposits.

An initial slug addition of 0.9 to 2.2 fluid ounces of **SUPER CONCENTRATE ALGAECIDE** per 1000 gallons of water to provide a concentration of 8 to 20 parts per million of **SUPER CONCENTRATE ALGAECIDE**, based on the total weight of water in the system, is recommended. Repeat initial dosage until control is evident.

Subsequent slug additions of 0.2 to 2.2 fluid ounces of **SUPER CONCENTRATE ALGAECIDE** per 1000 gallons of water (2 to 20 parts per million of **SUPER CONC. ALGAECIDE**) should be employed every 2 to 5 days or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the microbiological problem. Slug additions should be made in the sump of water cooling towers.
