For control of crabgrass, apply BETASAN® 36 WEED & FEED at the recommended rate (see RATES OF APPLICATION) any time from fall — September or October — through early spring for spring and summer control. With a later winter or an early spring application, the application must be made prior to crabgrass emergence (see DIRECTIONS FOR APPLICATION). For control of annual bluegrass and other annual weeds, apply BETASAN® 36 WEED & FEED at the recommended rate (see RATES OF APPLICATION) before the weeds emerge from the soil.

In southern or western states where germination of crabgrass, annual bluegrass and other weeds extends into the late summer and early fall, a second application of BETASAN® 36 WEED & FEED at the recommended rates should be made 4 to 5 months after the initial application.

Consult weed specialists of the state agricultural extension service or the state agricultural experiment stations for additional information, as the timing of application will vary with local conditions.

BETASAN® 36 WEED & FEED should be applied with a lawn spreader or any other applicator that will give uniform coverage. A more uniform application can be made by spreading half of the required amount of BETASAN® over the area to be treated, then applying the remainder at right angles or crosswise. Avoid misses by overlapping slightly. Sprinkle the area with water for 10 to 15 minutes after application to wash the BETASAN® down into the soil where the weed seeds are located.

**DIRECTIONS FOR APPLICATION**

Application of BETASAN® 36 WEED & FEED must precede emergence of weeds from the soil. Crabgrass will emerge from the soil from 4 to 6 weeks before it is visible above lawn sod. If weeds are visible above the soil, it is too late to apply this product. Remove leaves, dead tall grass, and other debris before applying BETASAN® 36 WEED & FEED to turf areas. Any weeds present around ornamentals must be removed or worked into the soil before applying BETASAN® 36 WEED & FEED.

**RATES OF APPLICATION**

**CRABGRASS** Apply 12 pounds of BETASAN® 36 WEED & FEED uniformly over 2,500 square feet.

**ANNUAL BLUEGRASS AND OTHER ANNUAL WEEDS:** Apply 20 pounds of BETASAN® 36 WEED & FEED uniformly over 2,500 square feet.

**RESEEDING**

Any material that provides effective control of annual grasses may affect new lawn-grass seedlings which germinate after treatment. Proper fertilization and watering will encourage the existing turf grass to fill in the thin or bare spots formerly occupied by crabgrass.

The following procedures are suggested in order to minimize any stunting of turf grasses which may occur when reseeding into BETASAN®-treated areas:

1. Do not reseed within 4 months after application. Renovate the area to be reseeded by raking thoroughly to scarify the soil surface. Where practical, mix peat in with the soil to provide an optimum seed bed.
2. When turf diseases or physiological disorders necessitate reseeding sooner than 4 months after BETASAN® application, apply powdered activated charcoal prior to reseeding to deactivate the BETASAN®. Apply the activated charcoal at a rate of 7 pounds per 1,000 square feet in 14 gallons of water per 1,000 square feet (300 pounds per acre in 600 gallons of water per acre).

Following application, irrigate the turf with sufficient water to wash the charcoal into the soil. Reseed no sooner than 7 days after applying the charcoal.
