Docs	Plantains	Yarrow
Ground Ivy	Purslane	and many other
Heal-All	Ragweed	similar broadleaf
Henbit	Sheep Sorrel	weeds
Knotweed	Shepherds	•

Durse

Lambsouarters

ORNAMENTAL LAWNS & TURF (other than bentgrass): Apply MEC-AMINE Plus at the rate of 3 to 4 pints per acre. in sufficient water for uniform coverage. If hardy weeks persist, make a second application after three weeks. Maximum kill of weeds will be obtained from spring or early fall application when weeds are actively growing. Avoid applying during long excessively dry or hot periods unless adequate irrigation is available. If application is made when soil is quite warm, use reduced rates to reduce potential injury. Do not irrigate within 24 hours of application. Do not apply to newly seeded turf until after the second or third mowing. Seed can be safely sown 3 to 4 weeks after application at recommended rate. Do not use on dichondra, if dandelions persist as a special problem, individual spot treatment with a single nozzie hand sprayer is recommended

Bentgrass Turf: in closely mowed Bentgrass (putting and bowling greens) apply MEC-AMINE Plus at a maximum rate of 1 fluid ounce per \$568 square feet preferably in May, or through September. Any yellowing will disappear after about one week

NOTE: Care should be taken to avoid overdosing Bentgrass. or injury may result. Large volumes of spray water will aid in obtaining uniform coverage. If hand type sprayers are used it is preferable to use a single nozzle sprayer rather than a multiple nozzle boom as sideways application with a boom where the spray from more than one nozzle is allowed to fall on the same area will result in heavy local over-application and subsequent turf discoloration or injury.

NOTICE OF WARRANTY
