DEC - 2 1998

Ms. Glenda Haage Platte Chemical Company P.O. Box 667 Greeley, CO 80632

Dear Ms. Haage:

)

Subject: Amendment- Allow chemigation for all crops/ sprinkler and drip irrigation only

Diazinon 500-AG

EPA Registration Number 34704-231 Your submission dated April 29, 1998

The amendment referred to above, submitted in connection with registration under FIFRA section 3(c)(7)(a), is acceptable provided that you:

- Submit and/or cite all data or other material required for registration/reregistration of your product under FIFRA section 3(c)(5) or FIFRA section 4 when the Agency requires all registrants of similar products to submit such data.
- 2. Make the labeling changes listed below before you release the product for shipment bearing the amended labeling:
 - a) In the Environmental Hazards text, delete "For terrestrial uses," and begin that sentence with "Do".
 - b) Under the PHI table for Fruit and Nut Crops, add "to wait" between "days" and "between" in the definition of PHI.
 - c) Revise the first sentence of the Timing/Special Directions for Almonds to read "Apply only as a single dormant spray.".
 - d) For Caneberries, in the Crop column add ":" after "only" and then delete the parenthesis marks around the list of specific types of caneberries.

HE ASSESSMENT OF

e) Also for Caneberries, in the Timing/Special Directions for Leafhoppers, delete "Do not make more than 5 applications per season. Do not apply within 7 days of harvest or illegal residues may occur.". For Dryberry Mites, delete "Do not apply within 7 days of harvest or illegal residues may occur.". Then add a NOTES section for this crop as follows:

Notes: (1) Do not apply more than 2 qts. of product per acre per application and no more than 5 qts. of product per acre per season. (2) To avoid illegal residues, allow a minimum of 7 days between the last application and harvest.

- f) For Cherries, in the **Timing/Special** Directions for Leafhoppers, replace "Make 3-4 applications" with "Make 3 applications". Also in the NOTES for this crop, delete item entry "(1)", since the Cherry Fruitflies directions will still call for 3 to 4 applications, and renumber the remaining items accordingly.
- g) For Grapes, revise the first sentence for both the Timing/Special Directions entries to read "Apply as a thorough cover spray as pest occurs.".
- h) For Strawberries, revise the Timing/Special Directions for Aphids to read just "Apply as pests occur. Repeat application, if necessary, after 7 days.". For Cyclamen Mites, delete "Do not apply within 5 days of harvest or illegal residues may occur. Applications may be made to plants after harvest.". Then add a NOTES section for this crop as follows:

Notes: (1) Do not apply more than 1 qt. of product per acre per application and no more than 4 qts. of product per acre per season. (2) To avoid illegal residues, allow a minimum of 5 days between the last application and harvest.

- i) For Walnuts, correct (the 3 qts. is per application, not per season) and consolidate the first two items into a single entry as follows: "Do not apply more than 3 qts. of product per acre per application and no more than 9 qts. of product per acre per season.", then renumber the remaining item as "(2)".
- j) In the minimum gallonage chart for Vegetable Crops, correct the Aerial Application entry for Ginseng to read "-" rather than "5", since the specific directions for this crop specify ground equipment only.
- k) Under the PHI table for Vegetable Crops, add "to wait" between "days" and "between" in the definition of PHI.
- 1) For Tomatoes, in the **Timing/Special Directions** for Aphids add the hyphen after "appli" in the break of the word

"applications". Also, delete the horizontal line in this same Timing/Special Directions entry that appears above "Do not apply within one", since this is a continuation of the same entry and applies to the pest groups beginning with Aphids, beginning with Banded Cucumber Beetles, and for Vinegar Flies.

- m) Under the PHI table for Field Crops, add "to wait" between "days" and "between" in the definition of PHI.
- n) For Grasslands Insects, relocate the closing parenthesis mark ")" from after "water per acre" to appear instead after "ground applications".
- o) At the end of the introductory paragraph for Insect Control on Ornamentals (i.e., after "...penetrate dense foliage") add "Repeat as necessary.".
- p) At the end of the introductory paragraph for Lawn Pest Control (i.e., after "...apply recommended rates") add "Repeat as necessary.".
- 3. Submit three (3) copies of your final printed labeling before you release the product for shipment.

and the second of

If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA section 6(e). Your release for shipment of the product constitutes acceptance of these conditions.

A stamped copy of the label is enclosed for your records.

Sincerely,

George T. LaRocca Product Manager 13 Insecticide/Rodenticide Branch Registration Division (7505C)

Š

RESTRICTED USE PESTICIDE

Due to Avian and Aquatic Toxicity

For retail sale to and use only by Certified Applicators or persons under their direct supervision and only for those uses covered by the Certified Applicator's Certification.

THIS PRODUCT MUST NOT BE USED ON GOLF COURSES AND SOD FARMS.

500-A

Organophosphate Insecticide

For control of certain insects on fruits, nuts, vegetables, field crops, lawns, and ornamentals.

ACTIVE INGREDIENT:

Diazinon [O,O-Diethyl O-(2-laopropyl-6-methyl-4pyrimidinyi) phosphorothicate] ...

INERT INGREDIENT:* 100%

This product contains 4 lbs. Diszinon per gallon Contains xylene range aromatic solvent.

KEEP OUT OF REACH OF CHILDREN CAUTION

EPA REG. NO. 34704-231 **NET CONTENTS.**

EPA EST. NO. 61282-WI-1

GAL (

See Below For Additional Precautionary Statements and Directions For Use.

IMPORTANT: Read the entire Directions for Use and the Notice before using this product. If terms are not acceptable, return the unopened product conainer at once.

IHT

EXPO4Y98

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS & DOMESTIC ANIMALS CAUTION

Harmful if swallowed, inhaled or absorbed through skin. Causes moderate eye injury. Avoid contact with skin, eyes, or clothing. Avoid breathing vapor or spray mist. Avoid contamination of food and feed. Food utensils such as tablespoons and measuring cups should not be used for food purposes after use in measuring pesticides. Keep out of reach of domestic animals. Do not use on humans, household pets or livestock. Do not contaminate ornamental fish ponds.

Personal Protective Equipment:

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category F on the EPA chemical resistance category selection chart.

Applicators and other handlers must wear: long-sleeved shirt and long pants, chemical-resistant gloves, such as: barrier laminate, butyl rubber, nitrile rubber or viton; and shoes plus socks.

Follow manufacturer's instructions for cleaning and maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

Engineering controls statements:

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets with requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS

Users should:

. Moreon

Wash hands before eating, drinking, chewing gum, using tobacco

Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

ENVIRONMENTAL HAZARDS

This product is highly toxic to birds, fish, and other wildlife. Birds, especially waterlowi, feeding or drinking on treated areas may be killed. Because of the migratory habits of Atlantic Coast waterfowl, do not apply this product to lawns in Nassau County, New York between November 1 and May 20. Do not exceed maximum permitted label rates. Rates above those recommended significantly increase potential hazards to birds, especially waterlowl. Avoid overlapping of sprays. On lawns, if waterfowl (ducks or geese) can be expected in the treated area after treatment (except spot treatment), apply at least 14 inch of water immediately after spraying this product, however, stop watering before puddling occurs. For terrestrial uses, do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Keep out of lakes, streams, ponds, tidal marshes and estuaries. Shrimp and crab may be killed at applications rates recommended on this label. Do not apply where fish, shrimp, crab, and other aquatic life are important resources. Do not contaminate water by cleaning of equipment or disposal of equipment washwatare

This pesticide is highly toxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this pesticide or allow it to drift to blooming crops or weeds if bees are visiting the treat-

PHYSICAL OR CHEMICAL HAZARDS

Do not use, pour, spill, or store near heat or open flame.

STATEMENT OF PRACTICAL TREATMENT

IF SWALLOWED: Call a physician or Polson Control Center immediately. DO NOT INDUCE VOMITING. Vomiting may cause aspiration pneumonia. Do not give anything by mouth if person is unconscious or

IF INHALED: Remove victim to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. Get medical attention.

IF ON SKIN: Wash promptly with soap and water. Rinse thoroughly. Get medical attention.

IF IN EYES: Rinse eyes with plenty of water. Call a physician if irrita-

NOTE TO PHYSICIAN: This product is an organophosphate insecticide. If symptoms of cholinesterase inhibition are present, atropine sulfate by injection is antidotal. 2-PAM is also antidotal and may be administered, but only in conjunction with atropine. This product contains a xylene range aromatic solvent which may present an aspiration hazard. Gastric lavage may be indicated if product was taken internally

FOR A MEDICAL EMERGENCY INVOLVING THIS PRODUCT CALL 1-800-228-5635, EXT. 138, OR CALL COLLECT, 612-851-818Q 2270 138.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

For any requirements specific to your Stare or Tribe, consult the agency responsible for pesticide regulation.

persons, either directly or through drift. Only protected handlers may be in the area during application. ,,,,,,

AGRICULTURAL USE BEDVIREMENTS

Use this product only in accordance with its tabeling and with the Worker Protection Standard, 40 CFB part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontainination, notification, and emergency assistance. It also domains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), restricted

Agricultural Use Requirements Cont'd.

entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI).

Exception: If the product is soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated. PPE required for early entry to treated areas that is permitted under the

Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is: coveralls, chemicalresistant gloves, such as: barrier laminate, butyl rubber, nitrile rubber or viton; and shoes plus socks.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. Do not permit children or pets to go onto treated areas until spray has dried.

Note: The California Department of Agriculture has set a 5-day reentry period for Diazinon on grapes, peaches, and nectarines. Five days should elapse between the time of application and the time a worker may enter the field to engage in any activity requiring substantial contact with treated foliage. When a mixture of two or more organophosphate pesticides are applied in combination, the interval should be prolonged by adding to the largest applicable interval an additional 50% of that Interval.

FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL MAY RESULT IN POOR INSECT CONTROL, CROP INJURY, OR ILLEGAL RESIDUES.

APPLICATION THROUGH AN IRRIGATION SYSTEM (CHEMIGATION)

DIAZINON 500-AG may be applied alone or in combination with other pesticides registered for application through sprinkler (including center pivot lat-eral move, end tour side (wheel) roll, traveler, big gun, solid set or hand move) or drip (trickle) irrigation systems (including surface and subsurface). Do not apply this product through any other type of irrigation system. To insure compatibility, pour the products into a small container of water in the correct proportions. After thorough mixing, let stand for 5 minutes. If the combination remains mixed, or can be remixed readily, the mixture is com-

Crop injury, tack of effectiveness, or itlegal pesticide residues in the crop can result from non-uniform distribution of treated water. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers, or other experts.

Do not connect the irrigation system used for pesticide application to a public water system, unless the pesticide label-prescribed safety devices for public water systems are in place. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments if the need arises.

Chemigation Systems Connected to Public Water Systems

1. Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals dally at least 60 days out of the year.

2. Clantigation systems connected to public water systems must contain a functional reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system. Stould be discharged into a reservoir tank prior to pesticide intro-duction. There shall be a symptete physical break (air gap) between the out-tet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

Sprinkler and Drip (Trickle) Chemigation

1. The system must contain a functional check-valve, a vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water course contamination from backflow.

2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check-valve to prevent the flow of fluid back toward the injec-

3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the imigation system is either automatically or manually shut down.

4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

The second second

5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

7. Do not use sprinkler chemigation when wind speed favors drift beyond the area intended for treatment.

Operating Instructions

The selection of the se

1. Determine the acreage to be treated by the system.

2. Measure the appropriate amount of DIAZINON 500-AG needed to treat the acreage to be treated. Refer to the specific directions for use for the application rate and the amount of water per acre.

3.Add the pre-measured DIAZINON 500-AG to the chemigation system supply tank and dilute with water if needed. Proper agitation is needed if DIAZI-NON 500-AG is tank mixed with other pesticides registered for sprinkler or drip chemigation.

4. Start the irrigation system and bring the system up to full pressure, making certain that all sprinkler heads are functioning properly.

5. Engage the chemigation injection or venturi system to add the DIAZINON 500-AG to the irrigation lines.

6. Continue to run irrigation system for a few minutes after supply tank is empty to allow material in the irrigation lines to reach the sprinkler heads furthest from the chemigation injection point.

Note: When treatment with DIAZINON 500-AG has been completed, further field imgation over the treated area should be avoided for 48 hours to prevent washing the product off of the crop.

Apply DIAZINON 500-AG only in sufficient irrigation water to achieve thorough plant coverage. Excess water will wash the product from the plant resulting in poor control.

To avoid a hazard to animals, wells or adjoining crops, do not allow irrigation water to collect or runoff.

WORKER SAFETY RULES

REPEATED EXPOSURES TO CHOLINESTERASE INHIBITORS SUCH AS ARE CONTAINED IN THIS PRODUCT MAY, WITHOUT WARNING, CAUSE PROLONGED SUSCEPTIBILITY TO VERY SMALL DOSES OF ANY CHOLINESTERASE INHIBITOR.

When handling this product do not rub eyes or mouth with hands. If you feel sick in any way, STOP work and get help right away. See Practical Treatment Section of this label.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal. Open dumping is prohibited.

PESTICIDE: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If pesticide spray mixture or rinsate cannot be disposed of by use according to label instructions, contact State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office

CONTAINER: Triple rinse (or equivalent). Then puncture and dispose of in a sanitary landfill, or incinerate, or burn, if allowed by state and local authorities. Stay out of smoke from burning container.

For minor spills, leaks, etc., follow all precautions indicated on this tabel and clean up immediately. Take special care to avoid contamination of equipment and facilities during cleanup and disposal of wastes. In the event of a major spill, fire or other emergency, call 1-303-356-4400 or 1-800-424-9300 day or night.

GENERAL INFORMATION

DIAZINON 500-AG is an emulsifiable solution which, when diluted with water according to the directions, is intended for the control of insect pests of agricultural crops and other plants. Do not use on food crops grown in greenhouses. Do not use in barns or dwellings. Do not use on livestock.

In the directions for use which follow, best control is obtained when application is made at first sign of pests. Application should be repeated only as directed to maintain control.

To avoid spray drift, do not apply under windy conditions. Avoid spray overlap, since crop or plant injury may result.

FRUIT AND NUT CROPS

REI - 24 hours

DIAZINON 500-AG may be applied using ground or aerial application equipment as specified in the following table. This table indicates the minimum amount of water that can be used for the various methods of application. The rate of DIAZINON 500-AG for aerial spray or concentrated spray applied to fruit trees by ground equipment is based on a dilute full cover spray applied with conventional ground equipment at a rate of 300-400 gallons of water per acre. The specific amount of product to be used appears under the secarate directions for use for each crop, if the Rate calls for 1 pt. of DIAZINON

500-AG in 100 gallons of water, this amounts to 3-4 pts. of product per acre when applied at the usual dilute ground spray volumes of 300-400 gallons of water per acre. In no case should the amount of product used per acre exceed the maximum amount per acre per application that is specified in the Timing/Special Directions for individual crops.

VEGETABLE CROPS

REI - 24 hours

For foliar or soil applications, DIAZINON 500-AG should always be applied as a spray in sufficient water to assure thorough coverage of the foliage or soil. DIAZINON 500-AG may be applied using ground or aerial application equipment as specified in the following table. This table indicates the minimum amount of water that can be used for the various methods of application. The specific amount of product to be used appears under the separate directions for use for each crop.

*PHI = Pre-Harvest Interval or the number of days between the last application and harvest.

Notes: (1) Soil incorporation: Following application of this product to control vegetable soil insects, immediately incorporate the product into the soil to the recommended depth (see TIMING/SPECIAL DIRECTIONS), using a rotary hoe, cultivator, disk, harrow, or other suitable means. For control of surface cutworms, incorporate 2-3 inches, for subterranean cutworms incorporate 3-6 inches. (2) To Protect Bees: Foliar applications of this product should not be made to peas or beans if these crops or weeds in the treatment area are in bloom, or to corn during the pollen shed period.

CROP PEST RATE DIRECTIONS Beans (Lima, Curworms are are in the soil (See Soil Incorporation Into the top 4-8 inches of Soil. FIELD CROPS

REI - 24 hours

Soil and foliar applications of DIAZINON 500-AG should always be applied as a spray in sufficient water to ensure thorough coverage. For foliar applications, observe stated time intervals between last application and harvest, as well as intervals between applications and total number of applications that can be made per season.

Pre-harvest Interval (PHI*) for Foliar Applications			
Crop	PHI* (Days)		
Hops	14		
Sugar Beets	<u> 14</u>		
*PHI = Pre-Harvest In	iterval or the number of days between the	e last	

TIMING/SPECIAL				
CROP	PEST	RATE	DIRECTIONS	
Hops	Aphids, Spider Mites	1 qt. per acre	Apply as pests occur. Receast application, as necessary, every 14 days. Do not make more than 4 applications per season. Do not apply within 14 days of harvest.	
Sugar Beets	Wireworms	3-4 qts. per acre	Broadcast just before planting, incorporate into soil 4-6 inches. Do not apply more than 4 qts. of this product to the soil, per season.	
	Beet Leafhoppers, Dipterous Leafminers, Aphids	%-1 pt. per acre	Apply as insects occur. Repeat application, as necessary, every 7 days. Do not make more than 5 applications per season. Do not apply within 14 days of harvest. Note: Diazinon will not control organophosphate-resistant learminers.	
	Grasshoppers	1 pt. per acre		
	Note: Sugar be	et tops may be	fed to beef and dairy animals.	

GRASSLAND INSECTS

Ditch Banks, Roadsides, Wasteland, Noncrop Aress, Barrier Strips Grasshoppers: Spray 14-1 pt. per acre in water (minimum of 1 gallon of water per acre) for aerial applications or a minimum of 5 gallons of water per acre for ground applications or in oil (a minimum of 1 gallon of oil per acre) when insects first appear, preferably in the nymphal stage. Thorough coverage of the foliage is essential.

Do not graze or use treated grass for lorage or feed.

REI - 12 hours

To control certain insects on Arborvitae, Azalea, Birch, Boxwood, Camellia. Carnation, Chrysanthemum, Douglas Fir, Elm, Gladioli, Hawthorn, Holly, Juniper, Lilac, Locust, Maple, Oak, Pine, Ornamental Plum, Poplar, Rhododendron, Rose, Spruce, and Willow, apply the recommended rates indicated below. Try to spray underside of leaves and penetrate dense

Insects	Amount of DIAZINON 500-AG to Use	
	Rate per 3 gallons of water	gallons
Aphids, Bagworms, Carnation Bud Mites, Carnation Shoot Mites, Clover Mites, Cyclamen Mites, Dipterous Leafminers, European Pine Shoot Moths, European Red Mites, Flea Beeties, Holty Bud Moths, Leafhoppers, Obscure Root Weevils, Omniverous Leaftiers, Privet Mites, Scale Crawlers (Cottonycushion, Lecanium, Pine Needle, San Jose, Soft), Thrips, Twospotited Spider Mites, Juniper Webworms, Whiteflies	½ fl. oz.*	1 pt.**
Apple-and-Thorn Skeletonizers, Cotoneaster Webworms, Fall Webworms, Hemlock Chermes, Oak Loopers, Obliquebanded Leafrollers, Pear Slugs, Tent Caterpillars	1½ fl. oz.*	3 pts.**

'1 fl. oz. = 2 tablespoons

**16 fl. oz. = 1 pint

Precaution: Do not use on Ferns, Poinsettla, Hibiscus, Papava, Pilea. and Gardenia, since injury to the plants may occur. Mimosa Webworms: Mix ½ oz. in 3 gallons of water (or 1 pt. in 100 gallons of water) and apply as a thorough foliar spray when adults first appear.

Make a second and third application at 4-5 week intervals.

LAWN PEST CONTROL (EXCLUDING GOLF COURSES AND SOD FARMS)

Precautions: Birds, especially waterlowl, feeding or drinking on treated areas may be killed. Apply this product only as specified on this label. Because of the migratory habits of certain waterfowl, do not apply in Nassau County, New York between November 1 and May 20. Do not exceed maximum permitted tabel rates, since rates above those recommended significantly increase potential hazards to birds, especially waterlowl. Avoid overlapping sprays. If waterlowl (ducks or geese) can be expected to enter treated area after treatment (except spot treatments), water lawn with at least ¼ inch of water immediately after application, however, stop watering before puddling occurs.

To control pests listed below, apply recommended rates.

Pest	Rate/10	00 sc. ft.	Remarks
	DIAZINON 500-AG	Water	
Lawn Chinch Bugs	2-3 fl. oz.	3 gallons	Use higher rate for longer residual control and in lawns of dense growth such as St. Augustine lawns.
Ants, Armyworms, Bermudagrass Mites, Clover Mites, Crickets,	2-3 fl. oz.	3 gallons	Spot spray ant hills and wasp ground nest openings.
Cutworms, Digger Wasps, Earwigs, Frit Flies, Lawn Billbugs, Leafhoppers, Sod			For digger wasps, apply product at dusk when wasps are not active.
