**IMPORTED FIRE ANT CONTROL**

For use as a mound treatment to control imported fire ants, apply 1 to 1.9 ounces by weight over and around each fire ant mound. Irrigate mound thoroughly immediately after treatment to remove the chemical from the granules and flush it down into the mound. A minimum of 1 gallon of water should be applied to each mound, but do not use more than 2 gallons of water as flooding of the mound may result. Apply water gently to avoid disturbing ants and causing migration before chemical can be effective. For best results, apply in the early morning or late evening hours when ants are least active. Treat new mounds as they appear.

**CONTROL OF TICKS WHICH TRANSMIT LYME DISEASE**

For control of juvenile and adult *Ixodes* spp. ticks (Deer tick, Bear tick, and Black legged tick) and *Amblyomma* spp. ticks (Lone star tick). Apply granules at the rate of 1.6 to 1.9 pounds of formulated product per 1000 square feet.

Begin applications in late spring or early summer (May/June). Uniformly apply granules to entire lawn, perimeter wooded areas, and property boundaries including shrub beds, ornamental plantings, and wooded areas where exposure to ticks may occur. For optimum results, irrigate treated areas after application to remove chemical from granules.

Dear Linda Arrington,

Enclosed you will find two notifications, one for each product identified above. Both notification forms are associated with both paper copies of the labels and a CD if you reviewer likes to do electronic comparisons.

It is my opinion that both changes are permitted under the PR Notice 98-10. If nothing is heard from EPA within 30 days, both changes have been accepted.

Thank you in advance for your consideration.

Sincerely,
