CITRUS SPRAY OIL 415

EPA REG. NO. 34704-337

MIXING DIRECTIONS: Before using this product, be sure the spray tank is clean and contains just enough water to cover the agitator shaft. With agitator running, start filling tank with water; add oil when tank is about half full. Pump this mixture through the overflow and back into the tank for about two minutes to insure proper emulsification. Fill with water, adding other desired materials as tank is filling. Keep agitator running at all times. Sufficient agitation must be present to insure proper emulsification. If an injector is used, first add 25 to 50 gallons of water to tank with engine running to provide good pressure. Put injector suction tube into the measured amount of spray oil, opening injector valve to allow the oil to be sucked into the tank, then fill the tank with water.

Do not use this material if it does not emulsify.

Use efficient equipment of the proper type. Avoid spraying during or immediately prior to hot or freezing weather (over 90°F or under 32°F), hot dry winds, rain or other unsuitable conditions; avoid overspraying or double spraying. Plants should be sprayed only when in vigorous condition and when their moisture condition is suitable.

Do not make an oil spray application within 2 weeks prior to, or after an application of sulfur. On Citrus do not make an oil application within 60 days prior to, or after an application of sulfur.

Apply when pests first appear. Apply the following recommended rates in sufficient water to thoroughly cover one acre. By ground use a minimum of 200 gallons of diluted spray per acre. Do not use in undiluted form.

Do not apply this product through any type of irrigation system.
