To control certain white grubs (larvae of European chafer and Japanese beetle), use two to four times the amounts of DURSBAN INSECT SPRAY shown in the TURF table (i.e., 12-24 oz. per 1,000 sq. ft.). Apply in enough water to obtain uniform coverage of the area treated followed immediately by thorough watering to wash the insecticide into the turf. For best results treat when grubs are young and actively feeding near the soil surface, usually during late July and August. Consult your local Extension Service specialist for proper time to treat in your area.

HORTICULTURAL NOTE: Damaged lawns and ornamental turf should be fertilized to stimulate re-growth and recovery from insect injury.
