### NON-CROP WEED CONTROL

This product is a non-selective herbicide for controlling a wide range of annual and perennial weeds and grasses. It is recommended only for noncrop land areas such as railroad rights-of-way and industrial areas.

This herbicide should be applied as furnished with a seed spreader, a shaker-type applicator, or with any equipment which will distribute the chemical uniformly over the area to be treated.

For short-term control of annual weeds on non-crop land areas such as roadsides, storage areas, and plant sites, apply 40 to 60 lbs. per acre. For extended control of annuals and partial control of perennials such as Bermudagrass and nulsedge, apply 100 to 200 lbs. per acre. Reapplication as a spot treatment may be required when deep-rooted perennial weeds such as Bermudagrass, bouncingbet, dogbane, Johnsongrass, nutsedge, and saltgrass are present.

Use higher levels of dosage rates on absorptive soils (high in organic mat-ter or sapon). To obtain better control, this herbicide should be absorbed by the topis. Best results occur when application is made just before weed mergence or in early stages of weed growth.

RETREATMENT: Apply 40 to 60 lbs. per acre when annual weeds and grasses reappear on sites where weed growth has been controlled.

SMALL AREAS: 1/3 lb. per 100 sq. ft. is approximately 150 lbs. per acre. Repeat spot treatment may be required when deep-rooted perennial weeds are present.

Users should consult State Agricultural Experiment Stations or Extension Service Weed Specialists for recommendations as to use in their particular area or write to Platte Chemical Co.
